

Erick Pulido |Business Data Analyst| US Citizen
erickpulido68@gmail.com (980) 890-4242 | Dallas,TX |
Can work W2 |C2C or Full-Time| Can do Hybrid in Dallas,TX

Summary:

- Highly experienced Business Data Analyst with over 7+ years of expertise in Business Data Analysis, Data Management, and Data Governance, including comprehensive skills in requirements gathering and documentation, seeks a Business Data Analyst position. Possesses exceptional oral and written communication proficiencies. Desires to leverage and further develop existing skills and experience to contribute significantly to organizational success.
- Proficient in conducting in-depth analysis of business processes, eliciting and defining business needs, and translating these into formal Business Requirement Documents (BRDs), Functional Requirement Documents (FRDs), Software Requirement Specifications (SRS)/Technical Requirement Documents (TRDs), User Stories, Use-case Specifications, and Non-functional Requirements.
- Experience in engaging with Stakeholders/Customers to gather detailed requirements through interviews, workshops, and meticulous review of existing system documentation and procedures. Skilled in delineating business processes and identifying and evaluating risks utilizing established templates and sophisticated analytical tools.
- Worked on end-to-end ETL pipelines using Azure Data Factory, SSIS, Alteryx, and Snowflake, streamlining ingestion, transformation, and loading of structured and semi-structured data.
- Experience working with Starburst/Trino, Impala, Hive, and Spark SQL, leveraging these technologies to perform complex data processing and analytics in distributed environments.
- Experienced in extracting data from various sources, such as databases, APIs, and files, using ETL processes, data integration tools, and scripting languages like SQL.
- Strong experience MS excel Pivot tables and V-Lookup tables for Data Analysis.
- Proficient in data analysis using SQL, Tableau, and other data analysis techniques.
- Proficient in using Alteryx to perform data preparation tasks such as cleansing, parsing, and transforming raw data from multiple sources, as well as blending data from disparate sources to create unified datasets for analysis.
- Used SQL to extract data from Oracle ERP databases to analyze the data.
- Strong understanding of project life cycle and SDLC methodologies including RUP, RAD, Waterfall and Agile.
- Involved in the rigorous definition of source to target data mappings, business rules, and data definitions.
- Successfully implemented a Metadata Repository, maintained Data Quality standards, established rigorous Data Clean-up procedures, performed complex Transformations, developed robust Data Standards, implemented a comprehensive Data Governance program, crafted intricate Scripts, Stored Procedures, and Triggers, and executed detailed test plans.
- Utilized SSIS to design and implement sophisticated data integration workflows, facilitating seamless movement and transformation of data from diverse sources for analytical purposes.
- Developed resilient ETL processes utilizing SSIS, ensuring data cleansing and enrichment to guarantee accuracy and consistency for generating insightful analytical insights.
- Implemented and administered Collibra Data Governance, including the strategic setup of Business Glossaries, Workflows, Data Governance Assets, user configurations, and Data Catalogs.
- Executed the ingestion of business and technical metadata into Collibra via meticulously prepared Excel import templates based on Source, Region, and Asset type.
- Ensured meticulous adherence to Data Governance functional standards, encompassing Metadata, Data Lineage, Data Mappings, and Data Ingestion into the EDL, to effectively support business and technology needs for data location, comprehensive understanding, and appropriate usage.

Education:

Bachelor's in Information Systems & Management from University of North Texas, Denton, TX

Professional Work Experience:

**PNC Bank
Dallas, TX**

Jul 2025 to Present

Data Analyst / Business Data Analyst

- Worked across multiple retail data initiatives covering business analysis, data profiling, data migration, data quality, data integration, and data management efforts.
- Performed deep source data analysis, discovery, profiling, and data mapping on large-scale datasets primarily in Teradata and Hadoop environments.
- Wrote and optimized complex SQL queries on a daily basis using Teradata SQL, Oracle SQL, and Toad to support analysis, validation, and reconciliation.
- Assisted in implementing and governing the retail data domain, including defining critical data elements, business rules, and quality thresholds.
- Supported Python-based ETL pipelines by helping implement data transformation logic and data quality rules aligned with retail business requirements.
- Partnered with data engineers to test and validate Python-driven ETL workflows loading data from Hadoop and relational sources into curated targets
- Documented data definitions, lineage, and quality rules in Alation, contributing to an enterprise data catalog and governance framework.
- Built and optimized data models and pipelines using SQL, Python, Spark, and Hive to support advanced analytics, reporting, and governance requirements.
- Developed and maintained data processing pipelines using PySpark, enabling efficient processing of large-scale datasets.
- Utilized PySpark for ETL operations, performing data extraction, transformation, and loading to and from various data sources.
- Integrated PySpark with Hadoop and other big data technologies, facilitating seamless data processing and storage.
- Developed and tracked data quality metrics, working closely with stakeholders to monitor rule failures, remediation status, and overall data health.
- Created and managed Agile epics and user stories in Jira, translating retail business needs into clear technical requirements for delivery teams.
- Collaborated with business, finance, and risk stakeholders to gather requirements, manage changes, and maintain accurate process and data flow documentation.
- Used SharePoint to manage project documentation, data mappings, governance artifacts, and cross-team collaboration materials.
- Performed extensive data validation, reconciliation, and issue analysis using SQL, Python outputs, and Excel to ensure accuracy and consistency of retail reporting data.

Dallas, TX**

Jan 2022 - Jun 2025

Data Analyst / Business Data Analyst

- Worked on projects involving Data Analysis, Data Management , SQL, problem-solving, and multi-tasking between multiple projects.
- Wrote complex SQL queries on daily basis to retrieve data and worked on Teradata, Oracle, MS Access, SQL Server etc.
- Involved in documenting the Data quality scores in Collibra using integrations with Informatica Data Quality.
- Implemented scalable data warehousing solutions using Snowflake to manage large datasets and improve performance across multiple environments.
- Automated repetitive data processing tasks using Python scripts, reducing manual effort and ensuring timely delivery of reports and analysis.
- Worked on large-scale Data Migration and Data Conversion solutions from Oracle and SQL Server to Snowflake and Azure SQL, ensuring accuracy, scalability, and minimal downtime.
- Optimized cloud data pipelines and Snowflake workloads through clustering, partitioning, and performance tuning, ensuring cost-effective and efficient query execution
- Performed extensive Data Profiling and Analysis using SQL Server, Oracle and Snowflake to uncover data inconsistencies, validate quality, and generate actionable insights.
- Governance to manage and maintain master data sets, ensuring data integrity.

- Utilized Collibra for metadata management, creating and maintaining a comprehensive data catalog to track data lineage, ownership, and quality across multiple systems.
- Designed and automated ETL workflows in Alteryx to extract, transform, and load data efficiently, ensuring consistent and reliable data pipelines for reporting and analytics.
- Conducted some data extraction and transformation from Hogan Deposits systems for in-depth analysis, ensuring accuracy and consistency across various reports.
- Developed dynamic and interactive dashboards in Power BI, providing actionable insights and enabling stakeholders to explore data and monitor key business metrics.
- Created Data Governance Policies, Business Glossary, Data Dictionary, Reference Data, Metadata, Data Lineage, and Data Quality Rules.
- Integrated multiple data sources into Looker, including cloud databases (BigQuery, Redshift), SQL databases, and flat files.
- Experienced in using multiple data sources for or business intelligence tools like Tableau, Power BI, or Looker for reporting and visualization.
- Developed and maintained data quality metrics and dashboards to track and report on data quality issues.
- Monitored and managed data quality by performing regular data audits and cleansing activities.
- Proficient in establishing and maintaining data governance frameworks, policies, and procedures to ensure data quality, integrity, and security across the organization
- Worked on Data Management using Collibra for Enterprise Data Governance projects on areas of Data Quality, Reference data management, Data Dictionary, Business Glossary, Data Discovery, Metadata management.
- Involved in documenting the Data quality scores in Collibra using integrations with Informatica Data Quality.
- Used Informatica Data Explorer (IDE) & Informatica Data Quality (IDQ) profiling capabilities to profile various sources, generate score cards, create and validate rules and provided data for business analysts for creating the rules.
- Created various data quality mappings in Informatica Data Quality (IDQ) tool and imported them into Informatica PowerCenter as mappings, Mapplets.
- Reported on key performance metrics for MDM initiatives, including data quality scores, data completeness, and time-to-resolution for data issues.
- Implemented machine learning models, including regression, classification, clustering, and deep learning techniques.
- Created automated Excel workflows using VLOOKUP and other advanced functions to streamline data processing and reduce manual effort.

Wells Fargo

Dallas, TX

Data Analyst / Business Data Analyst

July 2021 - Dec 2021

- Implemented scalable data warehousing solutions using Snowflake to manage large datasets and improve performance across multiple environments.
- Automated repetitive data processing tasks using Python scripts, reducing manual effort and ensuring timely delivery of reports and analysis.
- Worked with MDM tools like Informatica MDM, IBM InfoSphere, or SAP Master Data Governance to manage and maintain master data sets, ensuring data integrity.
- Utilized Collibra for metadata management, creating and maintaining a comprehensive data catalog to track data lineage, ownership, and quality across multiple systems.
- Designed and automated ETL workflows in Alteryx to extract, transform, and load data efficiently, ensuring consistent and reliable data pipelines for reporting and analytics.
- Created dynamic reports and dashboards using VBA, allowing for automated updates and real-time data visualization based on changing data inputs.
- Collaborated with data owners, business analysts, and IT teams within Collibra to define data assets, map data flows, and resolve data quality issues across departments.
- Optimized ETL/ELT pipelines in Snowflake using tools like Snowpipe, streams, and tasks to enable real-time data ingestion and processing.
- Implemented real-time data streaming in Power BI to monitor KPIs and business metrics, providing up-to-the-minute insights for operations and decision-making.

- Performed detailed analysis of complex business processes, data requirements and proposes solutions and worked directly with internal customers to understand the business environment and needs.
- Created automated Excel workflows using VLOOKUP and other advanced functions to streamline data processing and reduce manual effort.
- Used Data Integrator to load data from various sources such as MS Access, MS Excel, CSV

Morgan Stanley
Dallas, Texas
Sr Data Analyst

May 2019 – Jul 2021

Responsibilities:

- Designed and implemented data profiling and data quality improvement solution to analyze, match, cleanse, and consolidate data before loading into data warehouse.
- Worked on creating stored procedures, functions, views, triggers, packages in PL/SQL.
- Decomposition and documented of Business Lineage and Technical Lineage.
- Integrated Snowflake with BI tools like Tableau, Power BI, and Looker to enable interactive data visualization and reporting.
- Ensured data governance and security compliance by setting up access controls, monitoring data usage, and managing permissions in Databricks for secure handling of sensitive data.
- Collaborated with data engineers and data scientists on Databricks to build and deploy machine learning models, streamline workflows, and ensure data consistency across projects.
- Traced and catalog data processes, transformation logic and manual adjustments to identify data governance issues.
- Created ETL pipelines using Python to extract data from various sources, transform it, and load it into databases for analysis.
- Translated business problems into machine learning use cases, delivering actionable insights.
- Managed metadata for master data (MDM) entities, ensuring that data definitions, business rules, and transformation logic were documented and maintained.

Anthem Insurance
Dallas, TX
Business Data Analyst

March 2017 – Apr 2019

- Created data dictionary, Data mapping for ETL and application support, DFD, ERD, mapping documents, metadata, DDL and DML as required.
- Create and maintain product backlog items, bugs, features, etc. in JIRA and TFS / Azure DevOps for story tracking and documentation.
- Prepared user stories documentation in JIRA for Agile projects, documented requirements for the development and data migration epic to convert customer data to oracle instance with upgrades.
- Designed interactive visual workflows in Alteryx to provide stakeholders with intuitive and actionable insights.
- Conducted and automated the ETL operations to Extract data from multiple data sources, transform inconsistent and missing data to consistent and reliable data and finally load it into the Multi-dimensional data warehouse.
- Prepared business glossary and metadata with Confidential for all deposit related CDE's.
- Used advanced Excel to work on large datasets by developing formulas, creating Pivot tables, V-lookup and H-lookup formula development, regression analysis.
- Developed and maintained interactive data visualizations and dashboards using Tableau, enabling business stakeholders to easily understand and analyze complex data.
- Working experience on interactive dashboard and Reports in Tableau for monitoring the operation performance on a day-to-day basis.
