

Sr. ServiceNow Developer / Architect

Professional Summary

- Over 15+ years of IT experience, including 12+ years in ServiceNow managing modules such as ITSM, HRSD, ITOM, ITAM, SPM, ITFM, CAM, CMDB, Service Mapping, CSM, Discovery, and more.
- Designed and implemented solutions for Incident, Problem, Change, Request, and SIR modules with ITIL-aligned optimizations and automation.
- Administer, enhance, and govern the ServiceNow CMDB to ensure accuracy, integrity, and alignment with enterprise architecture standards.
- Implement and maintain CSDM (Common Service Data Model) structures, service hierarchies, and mapping relationships.
- Developed workflows, business rules, UI policies, client scripts, UI actions, Script Includes, and JavaScript components for ITSM, CMDB, CSM, HRSD, ITAM (HAM/SAM), and ITOM.
- Led full lifecycle implementations including patching, upgrades, update sets, data migration, and integrations via REST, SOAP, IntegrationHub, MID Servers, and Azure connectors.
- Implemented Azure SSO, SAML, OAuth, conditional access, and secure integrations using Azure Key Vault.
- Built catalog bundles, provisioning workflows, HRSD case flows, CSM case management, and multi-team automation using Flow Designer and orchestration.
- Designed CI attestation flows, automated CMDB onboarding, and multi-cloud CMDB models for AWS, Azure, and on-prem assets.
- Developed interfaces using JavaScript, HTML/CSS, AngularJS, and responsive Service Portal components.
- Troubleshoot, debugged, and refactored platform code to improve performance, user experience, and long-term maintainability.
- Collaborated across business, scientific, and commercial teams to convert requirements into scalable ServiceNow solutions aligned with platform architecture.
- Improved development standards, coding procedures, and platform roadmap alignment with ITIL and enterprise best practices.
- Implemented IRM and TPRM solutions supporting risk, compliance, vendor assessments, and enterprise governance frameworks.
- Delivered HRSD automation integrating Workday, PeopleSoft, AD, and external HR systems.
- Built CSM workflows, SLA/OLA logic, multi-channel support, and self-service enhancements improving customer engagement.
- Configured ITOM Discovery, Event Management, and Service Mapping to strengthen CMDB accuracy and proactive operations.
- Designed demand, project, and resource workflows under SPM to support strategic planning and portfolio execution.
- Integrated ServiceNow with Workday, UKG, JIRA, SAP, and external ticketing systems using REST/SOAP APIs and MID Servers.
- Developed catalog items, orchestrations, and Flow Designer workflows to automate provisioning and operational tasks.
- Managed CMDB and ITAM processes, ensuring data accuracy, lifecycle alignment, and governance across assets and CIs.
- Conducted peer code reviews, maintained security standards, authored knowledge articles, and supported user training.
- Participated in Agile/Scrum teams at McCann Health and CVS Health; contributed to sprint planning, retrospectives, and cross-functional delivery.

Education

- Bachelors in Business Administration (**2016 - 2020**)
University of Houston

Certifications

- ITIL V4 Certified
- ServiceNow – Certified System Administrator (CSA)
- ServiceNow – Certified Application Developer (CAD)
- ServiceNow – Certified Implementation Specialist (CIS)
- ServiceNow Certified Technical Architect (CTA)

Professional Experience

Accenture | JUN 2021-Present

Sr. ServiceNow Developer/Architect

- Implemented and customized ServiceNow CSM, ITSM, ITOM, CMDB, ITAM, HRSD, IRM, and GRC modules with custom forms, workflows, ACLs, UI policies, client scripts, Script Includes, and JavaScript automation.
- Integrated ServiceNow with telephony, email, Azure Monitor, Azure AD, Azure DevOps, SCCM, Jira, Splunk, vulnerability scanners, HRIS systems, ERP/procurement tools, and internal data warehouses using REST, SOAP, scripted APIs, MID Server, and IntegrationHub.
- Create, configure, and maintain Dynamic CMDB Groups for operational governance, reporting, lifecycle management, and compliance use cases.
- Led Discovery and Service Mapping implementations to ensure accurate CI population, dependency mapping, and impact analysis
- Integrated ServiceNow Discovery with Identification and Reconciliation Engine (IRE) to enforce data integrity, deduplication, and reconciliation rules across multiple data sources
- Built JavaScript-driven business rules, GlideRecord logic, GlideAjax calls, Script Includes, and AngularJS/Service Portal/Now Experience components for dynamic UI behaviors and automation.
- Implemented CMDB governance, class-level rules, normalization, dependency views, health dashboards, cloud discovery (AWS/Azure/on-prem), and multi-source enrichment pipelines.
- Automated Azure resource synchronization, CMDB onboarding templates, catalog interactions, request approvals, entitlement models, license reclamation, and hardware disposal processes.
- Delivered large-scale CMDB/CSDM programs including discovery optimization, service mapping, asset normalization, data cleansing, and hybrid cloud discovery patterns.
- Developed complex ETL/ELT workloads, data audits, backups, and database performance optimizations for ITSM, ITOM, CMDB, and ITAM datasets.
- Architected HRSD onboarding/lifecycle workflows integrated with identity systems for provisioning, notifications, access governance, and audit tracking.
- Built SecOps vulnerability ingestion pipelines, risk scoring automation, and remediation sync processes using scanners, APIs, and CMDB alignment.
- Created custom integration logs, monitoring utilities, payload sanitization tools, certificate management workflows, and event/alert governance models.
- Created performance-optimized catalog items, multi-step interactions, and advanced workflow debugging models for complex task orchestration.

- Provided architectural direction and governance for Common Service Data Model (CSDM) adoption across Asset, Service, CMDB, Discovery, and APM domains
- Designed and configured Identification and Reconciliation Engine (IRE) rules to ensure accurate CI identification, deduplication, and data consistency across multiple data sources
- Developed data migration, data cleansing, clone management, clone-back sanitization, and CMDB archiving strategies to manage table growth and data integrity.
- Conducted code reviews emphasizing design patterns, security, scalability, and ServiceNow best practices while mentoring junior developers on UI/UX and platform architecture.
- Diagnosed and resolved complex system defects through deep-dive debugging, log analysis, and cross-platform troubleshooting.
- Supported ITOM initiatives, including Discovery and Event Management, to enhance monitoring, alert correlation, and root cause analysis
- Served as ServiceNow CMDB & CSDM Architect, owning end-to-end CMDB and CSDM architecture, design standards, and data models across enterprise environments.

JP Morgan Chase | MAY 2019-JUN 2021

ServiceNow Lead Engineer/Administrator

- Defined and enforced CMDB/CSDM governance processes, including CI lifecycle management, data quality controls, ownership models, and architectural guardrails.
- Collaborate with architecture, operations, and service owner teams to validate CSDM/CMDB alignment and ensure proper CI classification.
- Collaborated with stakeholders to integrate Application Portfolio Management (APM) with CMDB for improved application lifecycle tracking and rationalization
- Implemented Service Mapping to establish end-to-end business service visibility, mapping application services to underlying infrastructure and improving impact analysis
- Built advanced integrations with Azure, Azure AD, Azure Storage, SCCM, Jira, Splunk, HRIS, telephony, ERP, and internal data warehouses using REST/SOAP APIs, MID Server, and scripted APIs.
- Implemented CMDB governance, multi-source reconciliation, CI class modeling, dependency views, continuous health rules, automated remediation tasks, and data normalization frameworks.
- Designed and executed ETL/ELT pipelines, transform maps, large-scale data migrations, and data warehouse integrations to support analytics, reporting, and operational intelligence.
- Created custom AngularJS and Service Portal widgets, dynamic forms, interactive dashboards, and user-friendly UI components to improve usability and workflow adoption.
- Built automated SLAs, OLAs, event-driven notifications, breach alerts, and performance dashboards for service desk and operations leaders.
- Migrated legacy ITSM/ITOM processes into ServiceNow, modernizing workflows, optimizing platform performance, and implementing scalable best practices.
- Led technical design and solutioning for CMDB/CSDM incident analysis, impact assessment, and complex data integrity issues.
- Implemented SecOps workflows including vulnerability ingestion, automated ticketing, risk scoring, Azure Sentinel-driven remediation, and integrations with security tools.
- Engineered ITAM and software asset management workflows for lifecycle automation, compliance, entitlement tracking, procurement integration, and cost optimization.
- Created custom REST endpoints, external submission APIs, and complex payload-handling utilities using JavaScript and GlideAjax, improving interoperability across systems.
- Designed automated change risk models using CI relationships, historical incident patterns, and impact calculators to reduce high-risk deployments.
- Built catalog-driven automation using GlideAjax, multi-step forms, lookup tables, orchestration tasks, and dynamic approval matrices.

- Optimized CI lifecycle management by aligning IRE processes with CMDB governance policies and CSDM standards
- Ensure continuous improvement of CMDB structures, governance processes, and service modeling roadmaps.
- Implemented multi-entity domain separation, data retention rules, archiving strategies, and custom reconciliation logic to maintain data integrity and performance.

McCann Health | OCT 2015-MAY 2019

Sr. ServiceNow Developer | Integration Specialist

- Developed custom scripts using JavaScript and Jelly to automate tasks and enhance functionality within the CSM module, ensuring optimal system performance.
- Managed IT inventory, ensuring efficient resource allocation and compliance through audits.
- Developed integrations with Azure Monitor, enhancing alerting processes and system monitoring.
- Configured automated workflows for incident, problem, and change management using Flow Designer.
- Maintained ServiceNow Discovery with accurate asset tracking using MID Servers.
- Configured and optimized Discovery patterns, probes, and sensors to ensure accurate CI population, classification, and relationship mapping within CMDB
- Create, configure, and maintain Dynamic CMDB Groups for operational governance, reporting, lifecycle management, and compliance use cases.
- Supported transformation of legacy CMDB data by reprocessing records through IRE, improving normalization, reconciliation, and overall data quality
- Designed voice-of-customer feedback workflows tied to case closure.
- Automated event remediation using Azure functions triggered through webhooks.
- Developed AngularJS search components for custom filtering logic.
- Configured CMMS for facilities management, including HVAC, medical equipment, and building infrastructure, providing real-time visibility into maintenance schedules and asset health.
- Optimized CMDB health by customizing dashboards and building widgets using AngularJS.
- Integrated JIRA with ServiceNow for seamless change management via REST API services.
- Led CMDB strategy and execution aligned with ITIL, Configuration Management, and Service Asset & Configuration Management (SACM) practices

CVS Health | MAR 2013-OCT 2015

ServiceNow Developer

- Implemented enterprise ServiceNow solutions across ITSM, ITOM, ITAM, HRSD, IRM, SecOps, and custom application modules to streamline IT and clinical operations.
- Developed major healthcare-focused ServiceNow implementations, integrating with Epic, Cerner, pharmacy systems, nurse call systems, imaging systems (MRI/CT), and building automation platforms.
- Designed CMMS workflows for biomedical equipment maintenance, scheduling, dispatching, calibration, compliance, and preventive maintenance tracking.
- Integrated CMDB with biomedical databases, RFID/RTLS systems, vendor APIs, and hospital CMMS platforms for accurate clinical asset lifecycle management.
- Integrate CMDB with 3rd-party data sources (such as SCCM, JAMF, Tanium, vCenter, AWS/Azure inventories, monitoring tools) to enhance CI completeness, enrichment, and lifecycle accuracy.
- Developed change management models, downtime communication workflows, and blackout schedules aligned with operating rooms and emergency department constraints.
- Created automated incident routing, prioritization models, and impact scoring based on clinical device criticality and CMDB relationship mapping.
- Built dashboards and AngularJS-/JavaScript-driven UI components for clinical engineering, hospital leadership, and IT operations.

- Designed ITAM workflows for software used in radiology, pharmacy, and diagnostic systems, including license tracking, procurement, warranty, depreciation, and EOL/EOS rules.
- Developed custom REST/SOAP API gateways, 3rd-party integrations, and Azure pipeline connections for CI/CD-aligned change management.
- Built JavaScript-driven UI actions, UI policies, client scripts, multi-condition scripts, and data scrubbing tools to improve usability and security.
- Implemented granular ACLs tied to user attributes, HR criteria, and sensitive provisioning actions across clinical and administrative modules.
- Designed CMDB tagging models for cloud-native assets, lifecycle rules, CI cleanup scripts, normalization logic, and health dashboards.
- Created unified healthcare operations portals consolidating IT, facilities, biomedical, and security service requests.
- Automated predictive maintenance, event correlation, and operational health checks for hospital infrastructure using ITOM and custom scripts.
- Managed Discovery, CMDB, integrations, and platform configurations following best practices, documentation standards, and governance models.

Verizon | JAN 2012-MAR 2013

Software Engineer

- Conducted workflow and process analysis to optimize operational efficiency across technical and non-technical business units.
- Produced clear User Stories, functional requirements, wireframes, and process documentation to support development, QA, and project teams.
- Prepared agendas, tracked action items, facilitated meetings, and maintained issue logs to ensure smooth project coordination.
- Configured ServiceNow Mobile Studio experiences for field technicians and enhanced usability for mobile workflows.
- Built distributed caching layers using Redis or Hazelcast to improve application responsiveness.

Nutanix | NOV 2010-DEC 2011

JavaScript Developer

- Led the development of business-critical front-end applications using JavaScript, React, and Angular, ensuring high-quality, scalable, and maintainable solutions.
- Delivered iterative, customer-focused releases with a focus on simplicity and maintainability, improving user experience and business value.
- Designed domain-driven models and implemented bounded contexts for complex business workflows.
