## SKILLS

Gameplay Programmer

Unreal Engine

Blueprints

Unity

C++, C#

Arduino

SolidWorks

Version Control

Trello

Data Analysis

Blender

VR Development

## EDUCATION

Aug 2023 - Sep 2025

FULL SAIL UNIVERSITY

- Bachelor of Science Simulation Engineering
- GPA: 4.0 / 4.0
- Valedictorian

Aug 2012 - Dec 2019

UPR: RECINTO UNIVERSITARIO DE MAYAGÜEZ

- Bachelor of Science Mechanical Engineering
- GPA: 3.3 / 4.0

## LANGUAGES

- English (Fluent)
- Spanish (Fluent)

# FERNANDO RAMIREZ SEPULVEDA

SOFTWARE ENGINEER

## PROJECTS

Nine Bright - Interactive 3×3 Light-Up Puzzle Game

June 2025

- Programmed puzzle logic, sound effects, and reset/randomization in C++ for ESP32
- Designed, fabricated, and assembled custom hardware including 9 RGB tiles
- Integrated potentiometer-based color controls, piezo speaker, and reset button

Project Fortuna AR Campus Tour Proof of Concept (Unreal Engine 5, Meta Quest)

May 2025 - June 2025

- Created a Blueprint-callable C++ function library for modular development
- Developed model display system tied to guided narration
- Built accessibility-focused subtitles UI with comfort-based positioning
- Designed navigation indicators directing users between AR tour points

Star Fern 24 - On-Rails Space Shooter (Unity)

December 2024

- Solo-developed in 2 weeks as an on-rails infinite survival shooter
- Programmed scoring, star ranking, barrel roll invulnerability, and powerups
- Integrated with Stewart Platform for real-time motion feedback

Stewart Platform - 6 DOF Motion Simulator

November 2024

- Designed, fabricated, and assembled Stewart Platform in SolidWorks
- Simulated six degrees of motion (surge, sway, heave, roll, pitch, yaw)
- Integrated with Unity game for real-time motion feedback

Donut King - 4-Player Free-for-All Arena FPS (Unity)

August 2024

- Implemented local multiplayer architecture for up to 4 players
- Developed independent UI/UX menu navigation per player
- Built player mechanics, weapon systems, and powerups
- Integrated Unity's new input system with controllers and keyboard/mouse

## WORK EXPERIENCE

Lockheed Martin MFC: Sensors ADWS

Nov 2021 - Aug 2023

RF Engineer

- Collected, analyzed, and validated **RF data** from production hardware to confirm readiness for downstream testing.
- Performed **verification testing** in semi- and full-anechoic chambers using spectrum analyzers and lab-based test setups.
- Supported cross-departmental testing by providing detailed RF performance assessments.
- Conducted **project management oversight**, checking in on parallel engineering efforts and assisting teams to resolve blockers and meet deadlines.
- Traveled to additional facilities to oversee **RF verification testing** and ensure compliance with customer requirements.

Lockheed Martin MFC: Sensors ADWS

Nov 2019 - Nov 2021

Systems Engineer

- Led **acceptance testing** of production hardware, including data collection, analysis, Q-note creation, and approval for further verification.
- Directed **Design Verification Testing (thermal, mechanical, and RF)**, ensuring hardware met program requirements.
- Authored all **test documentation** (plans, reports, and security documents) supporting successful program certification.
- Spearheaded a **critical hardware** verification test that had been delayed for nearly 5 years — developed the plan, gained approvals, coordinated execution at both on-site and remote test facilities, and presented results to customers, completing the effort in under 1 year.
