SUMMARY

Software Engineer with 4+ years of experience developing backend and full-stack applications using Java, Kotlin, Spring Boot, REST/GraphQL APIs, React, Angular, and Python. Experienced in building scalable distributed systems on AWS and Kubernetes, developing frontend applications, optimizing application performance, automating CI/CD, implementing automated testing, and supporting production applications. Strong experience with microservices, databases, API development, and Agile software development.

TECHNICAL SKILLS

Programming Languages: Java, Kotlin, Python, SQL

Backend Development: Spring Boot, REST APIs, GraphQL, Microservices, Flask, Django, Object-Oriented Programming

Frontend Development: React, Angular

Cloud & DevOps: AWS, Kubernetes, Amazon EKS, Docker, Jenkins, Argo CD, CI/CD

Databases: PostgreSQL, MySQL, SQL Server

Testing & Quality Assurance: JUnit, Karate, Gatling (Scala), Unit Testing, API Testing, Performance Testing

Monitoring & Observability: Splunk

Software Development Practices: Agile/Scrum, Sprint Planning, Code Reviews, Debugging, Performance Optimization, Distributed Systems, Data Processing

Version Control & Collaboration: Git, GitHub, Jira

AI Development Tools: Cursor, Claude, Claude Code, GitHub Copilot, Augment

PROFESSIONAL EXPERIENCE

Software Engineer | Intuit | CA, USA

Mar 2025 – Present

- Designed and built backend microservices and REST/GraphQL APIs in Java, Kotlin, and Spring Boot for high-throughput distributed systems, reducing P99 latency from 2761ms to 243ms and achieving 110 TPS via asynchronous processing and concurrency models.
- Deployed and scaled containerized Java/Spring Boot microservices on AWS EKS, supporting production distributed systems and high-throughput workloads.
- Built CI/CD pipelines using Jenkins and Argo CD and developed Splunk observability dashboards, reducing production incident detection time by 40%.
- Developed JUnit and Karate API tests and executed Gatling performance tests using Scala to identify regressions and validate service performance before production releases.
- Built a React frontend for an internal fintech platform to identify and track financial data discrepancies caused by database and data-entry errors.

Associate Software Engineer | Cognizant | India

Apr 2020 – Dec 2022

- Designed, developed, and maintained an internal Java 8/11 and Spring Boot backend application for HR timesheet and leave management, applying object-oriented design principles to deliver reliable, production-used functionality within a 6-person Agile engineering team.
- Participated in Agile sprint planning, code reviews, debugging, and release activities, collaborating with cross-functional teams to deliver backend enhancements on schedule.
- Enhanced Python-based Flask and Django applications by optimizing backend logic and resolving production issues, improving application reliability and operational efficiency.
- Optimized SQL Server queries and database operations, improving query performance by 30% and reducing operational downtime.
- Built and optimized backend components for XML-based data processing and SQL-driven reporting features, boosting reporting efficiency by 40% while maintaining compatibility with evolving application requirements.

PROJECTS

Stock Sales Analysis Platform

- Built a backend system using Java, Spring Boot, and RESTful APIs to process and analyze stock sales and transaction records.
- Designed data models and integrated PostgreSQL for structured storage and querying of stock sales data.
- Built a "favorite stocks" feature allowing users to mark and persist preferred stocks via the backend.
- Developed the frontend in Angular to display stock records, trends, and favorited stocks.

EDUCATION

Masters in Computer and Information Science | Gannon University, USA

Jan 2023 – Dec 2024

Bachelors in Mechanical Engineering | S.R.K.R Engineering College

Jul 2016 – Sep 2020
