(Open to Relocate)

Experienced **Java Developer** with over **4.5 years** of industry experience and a Master's degree in Computer and Information Sciences. Proven track record in developing and deploying scalable microservices and cloud-native applications, optimizing performance, and enhancing user experience. Proficient in **Java, Javascript, Python, SQL**, and frameworks such as **Spring Boot, React JS, and Express JS**. Adept in managing large-scale projects using **CI/CD pipelines, AWS, Docker, and Kubernetes**. Actively seeking opportunities to lead complex software development initiatives and implement innovative technical solutions in fast-paced environments

AWARDS, RECOGNIZATION, CERTIFICATIONS

- Awarded a [\\$12,000 merit scholarship by New York University \(NYU\)](#) as recognition of previous academic and professional achievements
- ACI's certificate of completion for [OpenShift, Kubernetes, and Docker Masterclass](#) Training program (Feb 2021 – Mar 2021)
- Udemy course completion certificate for [Java 17 Masterclass](#) (August 2024).
- Udemy course completion certificate for [React: The Complete Guide 2024](#) (August 2024)
- [Microsoft Technology Associate Certificate](#) for data processing and machine learning at BITS Pilani, Hyderabad (June 2018)
- Completed certification in [Deep Learning with TensorFlow 2.0](#), Udemy, May 2018

PROFESSIONAL EXPERIENCE

VOLANTE

Remote, US

Java Developer

May 2023 - Aug 2024

Assisted in transitioning the backend from a monolithic architecture to a microservices-based system by decomposing the application into independent services, implementing RESTful APIs, and leveraging Kafka for seamless communication

- Analyzed and identified tightly coupled components within the monolithic application, devising a plan to break them down into independent, scalable microservices, enhancing fault tolerance and ease of deployment
- Developed and deployed **Java-based microservices** using **Spring Boot, AOP, JDBC, and Spring Data JPA**, orchestrating the deployment with **Docker, Kubernetes, and OpenShift**
- Implemented an event-driven architecture utilizing **Kafka**, effectively modularizing the system, resulting in a 10% reduction in payment processing time and a 15% improvement in system responsiveness
- Leveraged **CI/CD** methodologies to streamline deployments on OpenShift, accelerating the delivery of critical updates and significantly enhancing the Biller's platform efficiency
- Ensured thorough code coverage through rigorous testing using **JUnit, Mockito, and PowerMock**
- Established and maintained **CI/CD** pipelines to automate the build, test, and deployment processes for microservices, ensuring quick and reliable releases
- Applied security best practices such as **OAuth2** and **JWT** for securing inter-service communication and ensuring compliance with industry standards
- Conducted performance testing and tuning to identify bottlenecks and optimize the performance of individual microservices, ensuring seamless user experience across the system

Data Engineering:

- Designed and developed automated pipelines using **PySpark** and Databricks to efficiently execute ETL procedures, ensuring seamless data ingestion and transformation

- Performed data manipulation and advanced analytics on real-time data, leveraging **PySpark** and Databricks to enhance processing speed and accuracy
- Built and implemented robust data models to support comprehensive analysis and reporting, driving improved data utilization
- Translated complex data insights into actionable strategies using **Power BI**, empowering stakeholders with data-driven decision-making capabilities and enhancing business outcomes

ACI WORLDWIDE

Software Engineer

Bangalore, India

June 2019 - June 2022

Contributed to V4, a comprehensive product suite managed by EBPP, a strategic team focused on delivering global online payment solutions, by maintaining and enhancing the existing product

- Maintained and resolved bugs in V4 products, enhanced existing features based on client requests, and developed new features to complement the existing products
- Worked on **RESTful** services using **Spring Boot**, enhancing application performance and enabling rapid development and deployment of new features
- Engineered responsive and user-friendly UI components leveraging **React**, **HTML5**, and **CSS3**. Adopted a micro-frontend architecture to break down the frontend into smaller, reusable components, significantly reducing latency and improving initial page load times by 40%. This approach enhanced the user experience and ensured faster performance across various devices
- Implemented Redux for state management, ensuring a seamless flow of data across the application. This facilitated efficient handling of complex state logic, leading to a more predictable and maintainable code base
- Implemented comprehensive code coverage through JUnit, Mockito, and PowerMock frameworks achieving a code coverage of over 90%
- Deployed **RESTful** APIs on **AWS lambda**, leveraging serverless architecture, resulting in a 30% reduction in infrastructure costs and a 50% increase in scalability, all while integrating seamlessly with S3, DynamoDB, API gateway, IAM, etc
- Appointed as a satellite security engineer, responsible for conducting comprehensive security scans using tools like AppScan, Checkmarx, and Black Duck. Identified and remediated vulnerabilities, ensuring the application adhered to security standards and best practices
- Operated within an Agile environment, and Collaborated effectively within a division of 50-70 individuals, contributing to team success and continuous improvement initiatives, fostering a culture of innovation and efficiency

Firm Development activities

- Took part in all of the company's Innovation Days, a special initiative aimed at inspiring employees to create innovative projects using company resources
- Mentored interns, providing guidance and support to ensure they quickly became proficient in their tasks, most mentees achieving promotions within a year
- Served as the editor of ACI's All India Newsletter, responsible for curating and publishing a monthly edition that highlighted key news, achievements, and developments across ACI's India offices

PROJECTS

[Mood.List](#) | Python, React.Js, Node.Js, Express.Js, AWS, Kubernetes, Docker, APIs

MoodList crafts personalized Spotify playlists by extracting key phrases and analyzing the mood conveyed in a user-provided text, tailoring musical selections to match the expressed sentiments

- Designed a scalable web app using React and Express Js along with AWS services such as AWS Comprehend, DynamoDB, AWS Lambda functions, etc
- Implemented frontend deployment through S3 static hosting and backend deployment using Docker and Elastic Kubernetes, incorporating autoscaling, health checks, and liveness checks for enhanced efficiency
- Utilized Spotify and ChatGPT APIs, implementing OAuth 2.0 authentication for Spotify users

Charge-Finder | Java, Spring Boot, React.js, AWS, SQL, GoogleMaps API

ChargeFinder is a convenient app designed to alleviate "low battery anxiety" by helping you quickly locate nearby locations where you can rent a shared power bank. Ideal for those on the go, it ensures you never run out of power during a busy day

- Led the development of an app that enables users to swiftly find nearby locations offering shared power banks
- Contributed significantly to the creation of Login/Sign Up UI pages, implementing user authentication and authorization, managing JWT handling, and developing page routing logic
- Employed MySQL JDBC drivers to connect to MySQL databases hosted on AWS RDS and utilized MyBatis mapper interface for database interactions

SKILLS

- **Languages:** Java 11/17, Python, SQL, PL/SQL
- **Frameworks:** Spring Boot, Spring Data JPA, Spring Security, Struts, Hibernate, Express JS, JUnit, Mockito, PySpark
- **Web Technologies:** React JS, Redux, Angular JS, JQuery, JavaScript, TypeScript, Node JS, CSS3, HTML5, J2EE
- **J2EE:** Servlets, JSP, JSTL, JMS, JDBC, JNDI, JAXB, JTA, JWT
- **Database:** PostgreSQL, Oracle SQL, MongoDB, DynamoDB, Redis
- **Cloud Technologies:** AWS, Azure, Docker, Kubernetes
- **Tools:** Git, Maven, Gradle, Jmeter, Kafka, rabbitMQ, Jenkins, Postman, OAuth 2.0

EDUCATION

NEW YORK UNIVERSITY

MS in Computer & Information Sciences (GPA: 3.96/4)

New York, US

May 2024

VELLORE INSTITUTE OF TECHNOLOGY

BTech in Computer Science & Engineering

Chennai, India

Apr 2019
