SUMMARY

Full Stack Java Developer with **4+ years of experience** designing and developing scalable **enterprise applications** using **Java, Spring Boot, Microservices, React, REST APIs**, and **relational databases**. Experienced with **AWS and Azure cloud services, Apache Kafka, Spring Security, Docker, Kubernetes**, and **CI/CD pipelines**. Proven ability to deliver reliable solutions across **healthcare, financial services, credit reporting**, and **internal business applications** within **Agile Scrum environments**.

TECHNICAL SKILLS

- **Languages:** Java (8, 11, 17, 21), JavaScript, TypeScript, SQL, HTML5, CSS3
- **Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, React, JSP, Servlets, JDBC
- **Architecture:** Microservices, REST APIs, SOAP Services, Event Driven Architecture
- **Databases:** Oracle, PostgreSQL, MySQL, Redis, Amazon RDS
- **Cloud:** AWS, Azure, S3, Lambda, EKS, ECR, MSK, ElastiCache, CloudWatch, App Service, Key Vault
- **DevOps:** Docker, Kubernetes, Jenkins, Azure DevOps, Maven, Git, GitHub
- **Testing/Tools:** JUnit 5, Mockito, SonarQube, Swagger, OpenAPI, Splunk, IntelliJ IDEA
- **Methodology:** Agile Scrum

PROFESSIONAL EXPERIENCE

Full Stack Java Developer - Optum, MN

Feb 2026 - Present

- Participate in **Agile Scrum** ceremonies, collaborating with product owners, healthcare analysts, architects, QA engineers, and DevOps teams to deliver prioritized platform enhancements.
- Develop domain driven **microservices** using **Java 21, Spring Boot 3.4, Spring MVC, and Spring Data JPA** for patient profiles and care management workflows.
- Design secure **REST APIs** to integrate clinical, claims, pharmacy, and care management data across internal applications, supporting unified patient information and coordinated healthcare workflows.
- Implement event driven processing with **Apache Kafka** to publish patient updates, care gap events, and intervention status changes across independent microservices.
- Build responsive **React 18.3 and TypeScript** dashboards supporting patient search, prioritized work queues, care gap reviews, outreach documentation, and treatment outcome tracking.
- Develop data access components for **Oracle and Amazon RDS PostgreSQL** using optimized queries, **JPA** repositories, indexes, stored procedures, and transactional workflows for healthcare data.
- Improve application response times using **Amazon ElastiCache** for **Redis** and securely store reports, documents, batch files, and authorized exports in encrypted **Amazon S3 buckets**.
- Implement **Spring Security, OAuth 2.0, JWT validation**, and role based authorization while using **AWS IAM, KMS, and Secrets Manager** for access and credential protection.
- Containerize microservices using **Docker**, publish versioned images to **Amazon ECR**, and support **Amazon EKS** deployments with Kubernetes health checks and autoscaling configurations.
- Develop unit and integration tests using **JUnit 5** and **Mockito** while maintaining **Maven builds, Jenkins pipelines, SonarQube** quality gates, **GitHub** repositories, and **Splunk** dashboards.

Environment: Java 21, Spring Boot 3.4, Spring MVC, Spring Data JPA, Spring Security, Microservices, REST APIs, Kafka, React 18.3, TypeScript, Oracle, PostgreSQL, Redis, AWS, Amazon EKS, Amazon S3, Docker, Kubernetes, Maven, Jenkins, Git, GitHub, JUnit, Mockito, SonarQube, Swagger, and Splunk.

Java Developer – DTCC, Coppell, TX

Apr 2025 - Oct 2025

- Participated in **Agile Scrum** ceremonies, including sprint planning, daily stand ups, backlog refinement, reviews, and retrospectives while coordinating with cross functional teams.

- Developed scalable backend microservices using **Java 17 and Spring Boot 3.3** to validate securities transactions, process settlement instructions, and manage transaction exceptions.
- Designed and implemented **RESTful APIs** to exchange trade, account, participant, and settlement status information between internal applications and downstream financial systems.
- Created optimized **Oracle Database** queries, stored procedures, and data access components to retrieve transaction records, update settlement statuses, and generate exception reports.
- Implemented **JWT authentication and role based authorization using Spring Security**, restricting transaction submission, approval, exception management, and reporting based on user permissions.
- Deployed Spring Boot services on **Azure App Service**, secured application credentials through **Azure Key Vault**, and monitored performance using **Application Insights**.
- Configured **Azure DevOps CI/CD pipelines** to build, test, and deploy application changes automatically across development, testing, and production environments.

Environment: Java 17, Spring Boot 3.3, Microservices, RESTful APIs, Spring Security, JWT, Oracle Database, SQL, Azure App Service, Azure Key Vault, Application Insights, Azure DevOps, Maven, Git, Agile Scrum

Jr. Software Engineer - Cognizant Technology Solutions, Chennai, India

Jan 2022 - Feb 2024

- Collaborated within **Agile Scrum teams** through sprint planning, daily stand ups, backlog refinement, reviews, and retrospectives, delivering prioritized enhancements across scheduled release cycles.
- Developed **Java 11** and **Spring Boot 2.5** microservices integrating **REST** and **SOAP** services, using asynchronous and concurrent processing to handle high volume credit reporting transactions efficiently.
- Built responsive **React 17 interfaces** for company searches, credit report reviews, account monitoring, and risk alerts, integrating reusable components with secure backend APIs.
- Optimized **MySQL** and **PostgreSQL** data access using **SQL queries**, joins, indexes, and stored procedures, improving query performance, reporting consistency, and transaction response times.
- Used **Amazon S3** for reports and uploaded documents, configured **AWS Lambda functions** for event driven file validation, and monitored processing failures through **Amazon CloudWatch**.
- Managed source code with **Git and GitHub**, developed and debugged services in **IntelliJ IDEA**, and automated Maven builds and Jenkins deployment pipelines.

Environment: Java 11, Spring Boot 2.5, Microservices Architecture, RESTful APIs, SOAP Web Services, React 17, MySQL, PostgreSQL, AWS S3, AWS Lambda, Amazon CloudWatch, Maven, Jenkins, Git, GitHub, IntelliJ IDEA, Agile Scrum.

Web Developer - YJ InfoTech, Bangalore, India

Jan 2021 - Dec 2021

- Contributed to developing an internal **IT Helpdesk and Asset Management Web Application** for managing employee **support tickets** and company **IT assets**.
- Built **responsive web pages** for ticket creation, tracking, asset records, and dashboards using **HTML, CSS, Bootstrap, and JavaScript** across desktop and mobile devices.
- Implemented **form validation, search, filtering, status based views, and CRUD operations** for creating, updating, assigning, and closing tickets while maintaining accurate asset records.
- Assisted with integrating front end modules using **Java 8, JSP, Servlets, JDBC, and MySQL**, while performing **testing, debugging, defect resolution, and cross browser compatibility checks**.

Environment: HTML5, CSS3, Bootstrap, JavaScript, Java 8, JSP, Servlets, JDBC, MySQL, Apache Tomcat, Eclipse IDE, Git, Chrome DevTools, and Windows.

EDUCATION

- **Master of Science in Computer Information Systems**
Rivier University - Nashua, NH
