

SUMMARY

Data analyst with 4+ years of experience, knowledgeable in SQL, Python, R, and expert at extracting actionable insights from complex datasets. Proficient in developing ETL processes, creating interactive dashboards, and conducting advanced statistical analyses. Skilled in A/B testing, KPI tracking, and data-driven decision-making. Experienced in utilizing cloud platforms and BI tools to optimize marketing strategies, improve user engagement, and drive business growth across diverse industries.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python (NumPy, pandas, Scikit-learn, Matplotlib, Seaborn), SQL, R

Data Visualization and BI Tools: Tableau, Power BI (DAX), Looker, Excel (advanced functions, pivot tables, VLOOKUP)

Database Management: MySQL, PostgreSQL, Microsoft SQL Server, Snowflake

Machine Learning & AI: TensorFlow, Keras, PyTorch, Apache Spark, Gen AI (Open AI), LLM(GPT-4), NLP

Data Processing and ETL: dbt (data build tool), Alteryx, Talend, Airflow, ETL processes

Data Analysis and Statistical Methods: Data mining, Descriptive analytics, A/B Testing, Regression analysis, hypothesis testing

Cloud Platforms & Version Control: AWS (S3, SageMaker), Google Cloud Platform, Microsoft Azure, Git, GitHub

Soft Skills: Critical thinking, problem-solving, Attention to detail, Data storytelling, Collaboration with cross-functional teams

EDUCATION

Master of Science in Information Systems | Northeastern University

May 2024

Masters in Mathematics | University of Mumbai

December 2021

Bachelors in Mathematics | University of Mumbai

May 2017

PROFESSIONAL EXPERIENCE

Data Analyst | Epsilon | Boston, MA

January 2024 – January 2025

- Analyzed user engagement data using SQL and Python to identify patterns between app users and non-app users, contributing to the development of targeted email campaigns.
- Created interactive dashboards in Tableau to visualize app download trends and email campaign performance, enabling real-time monitoring of KPIs and facilitating data-driven decision-making.
- Conducted A/B testing on email content and design elements using Python and R, resulting in optimized messaging that contributed to a 4x increase in app downloads.
- Developed Python scripts and machine learning models using Keras to identify and flag data inconsistencies across CRM and Excel sources, reducing manual data review time and improving the accuracy of customer segmentation for email campaigns.
- Collaborated with the marketing team to develop and track custom KPIs for the Edward Jones campaign, utilizing Excel, Power BI, and TensorFlow-based predictive models to generate weekly performance reports, highlighting the 99.2% delivery rate and 3.3% click rate.
- Implemented data cleaning and preprocessing techniques using pandas to ensure data quality, enabling accurate segmentation and analysis of user behavior that informed the storytelling approach in the email campaign.

Data Analyst | Trigent Software, India

January 2019 - July 2022

- Developed and implemented data integration processes using ETL tools, incorporating various data sources including Google Analytics and CSV files. This resulted in a centralized data repository for a global child mobility products leader.
- Automated data extraction and transformation processes using dbt (data build tool) and SQL, streamlining the ETL pipeline and reducing data processing time which allowed for quicker access to critical business insights.
- Designed and executed SQL queries to cleanse, enrich, and format data from multiple sources, improving data quality and standardization for accurate analysis.
- Built interactive Power BI dashboards showcasing key marketing KPIs, incorporating visuals and custom filters. This enabled stakeholders to gain real-time insights across various product categories, regions, and customer segments.
- Conducted statistical analysis and data modeling using Python (pandas, Scikit-learn) to uncover consumer behavior patterns and market trends. This contributed to a 20% increase in targeted marketing campaign effectiveness.
- Collaborated with cross-functional teams to define and track custom marketing metrics. Utilized DAX in Power BI for advanced calculations and data storytelling, resulting in improved decision-making capabilities for the marketing department.
- Developed and implemented a neural network-based recommendation system using PyTorch, leveraging customer purchase history and product attributes. This machine learning model improved product suggestions, leading to a 15% increase in cross-sell opportunities and enhancing the overall customer experience on the e-commerce platform.

PROJECTS

NYC Motor Vehicle Collision Analysis

- Accelerated decision-making by converting 2.05 million rows of NYC collision data into actionable insights with Tableau.
- Designed a model using ER studio with 10+ facts and dimensional entities, overcoming discrepancies within the data.
- Created ETL pipelines using Alteryx and Airflow, for 40% reduction in data load times for Azure, MySQL, and Postgres.
- Extracted data from Google Cloud- BigQuery and processed in Talend, resulting in a 30% reduction in loading time.

Lululemon Stock Analysis

- Led a team of 6, Lululemon Portfolio Management, formulated and presented an analysis on its stock value.
- Determined Lululemon as a moderate risk stock with a 10yr 291.65% percentage increase and kurtosis at 0.740.
- Developed regression model, improving prediction accuracy by 15% through comparative analysis with decision tree.
- Recommended trading signals based on analysis, yielding 20% increase in successful trades.

Data Science Assistant (Gemma LLM)

- Integrated Gemma 2b-it with a Retrieval-Augmented Generation system for dynamic data science education.
- Optimized AI response accuracy and system efficiency, achieving a human evaluation score of 0.867.
- Resolved significant technical challenges, including token limitations and platform compatibility issues.
- Enhanced educational interactions through accurate and context-aware AI responses.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Validates expertise in designing distributed systems on AWS, demonstrating proficiency in core AWS services, best practices for building secure and reliable applications, and the ability to create cost-efficient, scalable solutions.
