

Gautam Khandige

Cleveland, OH • (216) 408-5106 • gautam.khandige@case.edu • GitHub: github.com/gbk2002 • LinkedIn: linkedin.com/in/gautamkhandige

EDUCATION

Case Western Reserve University

B.S. Computer Science & Data Science

Cleveland, OH

Graduation Date: Dec 2025

- Dean's High Honors (3x), University Merit Scholar, IIT Kanpur TOSC Quiz National Finalist (Top 7)

WORK EXPERIENCE

Interactive Commons

Cleveland, OH

Software Developer Intern

May 2024 - May 2025

- Optimized real-time image segmentation by integrating Meta's Segment Anything with OpenCV, decreasing processing latency from 45 seconds to 15 seconds and enhancing accuracy by 30%, thereby improving VR object alignment precision for immersive experiences.
- Refactored thousands of lines of code to remove hardcoding, enabling dynamic LED wall interactivity via GPT & Claude APIs, supporting up to 200 users.
- Designed and launched a React-based web application for cafe light LED walls, resulting in a user-friendly interface that streamlined control operations for over 150 daily patrons while enabling seamless customization features.

RoviSys

Aurora, OH

Software Engineer Intern (Industrial AI)

May 2023 - Jul 2023

- Built predictive ML models (XGBoost, scikit-learn) on 100K+ refinery records, achieving 95%+ accuracy and reducing manual errors by 20%.
- Designed a Flask + React simulation app for scenario modeling and data visualization across 40 tanks, improving decision-making speed by 30%.
- Automated data integration pipelines with Azure Functions, boosting processing efficiency by 50%.

Probitous Solutions

Bangalore, India

Software Engineer Intern

May 2021 - Aug 2021

- Developed real-time tennis ball tracking system with OpenCV and scikit-learn, reducing processing latency by 25% and improving frame analysis speed by 30%.
- Trained ML models on 10K+ video samples, improving line call accuracy by 15% and reducing false positives by 20%.

PROJECT EXPERIENCE

PollPal - Full-Stack Developer

May 2025

- Built a local discovery app with React, Flask, and MongoDB Atlas; integrated Google Places API to process 5K+ records with <200ms response time.
- Designed recency-weighted algorithm improving recommendation relevance by 25%, delivering a polished MVP ahead of schedule.

Smart Allocator of Residence and Ambition (SARA)

Apr 2024

- Developed city/neighborhood recommendation engine using Random Forest, React, Flask, and MySQL, reducing search time by 50%.
- Improved recommendation accuracy by 35% and search-to-selection conversion by 40%; managed GitHub-based CI/CD workflows for 10K+ users.

UC Berkley AI Hackathon Project - EMO-AI

Jun 2024

- Created real-time emotion detection system with TensorFlow & dlib, trained on FER2013 dataset (200+ epochs), achieving 93% accuracy.
- Enhanced dynamic mental health interventions with real-time emotion tracking.

Automated Voice Assistant (AVA)

Mar 2022

- Built Python-based voice assistant with Google Speech API for medical bookings, reducing booking time by 1.5 minutes.
- Improved traffic by 38% through reminders, audio feedback, and browser automation using Selenium.

SKILLS

Languages: Python, Java, JavaScript, C#, C++, Golang, SQL, TypeScript, R, HTML/CSS,

Frameworks/Libraries: TensorFlow, scikit-learn, XGBoost, pandas, React.js, Flask, FastAPI, Node.js, REST API, Selenium

Databases/Cloud: MySQL, PostgreSQL, MS SQL Server, Azure, MongoDB, NoSQL

Tools: Git, VS Code, Jupyter, RStudio, CI/CD, Docker, Figma, LaTeX, Slack
