Quality Assurance Engineer

I'm a Quality Assurance Engineer with proficiency across all phases of the testing cycle and adept at both manual and automation testing, with a focus on user experience. Experienced in various testing methodologies, API testing, SQL database testing, and Agile/Scrum framework.

- **Smoke, Usability, Compatibility, Regression, Negative, Exploratory, & E2E testing**
- **Database Validation & Verification**
- **Agile/Scrum methodology in QA & UAT Environment**
- **Manual & Automation Testing in Windows and MacOS**
- **Behavior Driven Development**
- **API Testing**
- **Mobile Testing – Android & iOS**

SKILLS

Testing Tools & Platforms: BrowserStack, Jira, Loom, MacOS, Mobile Testing, Selenium/Katalon, TestRail, Windows, Zephyr

Languages & Database Tools: Appium, CSS, HTML, Java, JavaScript, Jmeter, MySQL/Dbeaver, PHP, Postman, Python, SQL

Project Management: Agile, Azure DevOps, Confluence, Jira, MS Teams, Salesforce, Slack, Test Rail, Trello

WORK EXPERIENCE

Diversociete • Remote • 07/2021 – Present

QA Engineer • Full-time

- **Defect & Bug Processes** – Resolve defects, leading to a 15% reduction in high-priority bugs. Identify and track system defects, create logs and reports in Jira, and promptly communicate high priority bugs with the development team.
- **API Testing** – Conduct API validation testing with Postman to ensure seamless integration, focusing on data accuracy, security, and performance.
- **Testing Processes** – Write & execute detailed test cases in Zephyr based on all business requirements and stakeholder goals, increasing process efficiency by foreseeing potential user scenarios.

- Automation Testing – Improved test execution time by 25% through assisting in the selection of automation test candidates, setting up automation tests in Katalon, and running and reporting on tests.
- Database Validation – Utilize MySQL with Dbeaver to perform database testing and verification with SQL.
- Knowledge Training & Sprint Planning – Attend stakeholder and Agile sprint planning meetings and assist team members in gaining an understanding of projects and teaching software usage.
- Test Strategies – Contribute to choosing appropriate test strategies under Agile methodology, including Functional, Integration, Regression, Black-Box, and E2E testing. Main methodology was Behavior Driven Development.
- Project Management & Communication – Utilize project management tools like Jira and Slack to stay updated on sprint progress and address high priority issues.

Media Fusion • 05/2018 – 11/2023

Project Analyst | 3D & Graphic Designer • Full-time

- Design quality assurance – Predicted errors ahead of time, reducing error rate by 35%. First and last point of contact for design quality assurance.
- Project Analysis – Reviewed project outcomes and helped facilitate operational decisions by assessing capabilities and bandwidth, then recommending routes. Improved process efficiency by implementing tools to streamline processes and reduce production times.
- Accessibility adherence – Ensured all designs are in accordance with accessibility standards and modify products to ensure compliance.
- Time and labor estimations – Provided and estimated accurate labor requirements and timelines for stakeholders. Present recommendations on project prioritization and work flows.
- Software systems – Ran ERP Software system for reporting on finance management, labor, and expenses. Worked in PMT software programs to create, log, and report on production requests.

SCSWORX • 09/2015 – 05/2018

Web Management | Administrative Assistant • Full-time

- CRM/SaaS – Utilized Salesforce for CRM/SaaS, maintaining data accuracy. Reported on and maintained client projects, requirements, and data.
- Team Production Environment – Increased team productivity by 30% by developing and designing a workspace suitable for all team members' accessibility needs, improving production speed and comfort.
- Web Design & Coding – Updated code, and improved web UI/UX through HTML, CSS, and PHP.
- Web Testing – Used functional testing to ensure usability and brand adherence. Identified bugs, reported on them, and patched the site accordingly.
- Design Error Replication – Identified and reported on design errors that interfered with product usability and suggested improvements to the production team.

EDUCATION

Bachelors in Industrial Design

Auburn University • Auburn, Alabama • 08/2011 – 05/2015
