

Gouthami
Senior Data Analyst/BI Developer/Tableau Developer

Email: gouthamiboyella05@gmail.com

Contact No: +1 (614) 588-6588

Professional Summary:

- ✓ Over 6 years of experience in Data analysis, software development, and design using Python, Spyder, Django, and Data Analytics using Python/R/SQL/Power BI/Tableau.
- ✓ Worked with Healthcare, Financial, Insurance domain clients as a BI, Tableau and Data Analyst.
- ✓ Overseen data governance practices within the QNXT system, ensuring data accuracy, integrity, and compliance with regulatory standards.
- ✓ Experience in Software Development Life Cycle (SDLC), RDBMS, and Data Warehouse & Data Modeling concepts.
- ✓ Developed and implement strategies for data cleansing, normalization, and optimization.
- ✓ Expertise in Relational Database Management Systems, Tableau, Looker, AWS cloud computing, Microsoft Azure Cloud, Hadoop.
- ✓ Used SSRS to create and manage a wide variety of different types of reports and deliver them in a range of formats.
- ✓ Extensive experience in SAS/Base, SAS/Stat, SAS/Macros, SAS/SQL, SAS/ODS, SAS/Graph, SAS/Connect, SAS/Access, SAS/EG.
- ✓ Strong understanding of SAP table structures, creating custom reports and queries to extract actionable insights from complex data sets within SAP modules such as MM, PP, FI, WH/EWM, and QM.
- ✓ Proficient in Jira, SharePoint, Teams, Alteryx, SSIS, SSRS, SSMS, Squirrel, SQL Server, Tableau, Semarchy, Git & GitHub
- ✓ Interpreted and communicate findings to both technical and non-technical teams in a clear and concise manner.
- ✓ Oversee the configuration of Collibra for reference and master data domains.
- ✓ Proficient in using T-SQL for developing complex Stored Procedures, Triggers, Tables, Views, User Functions, User profiles, Relational Database Models and Data Integrity, SQL joins and Query Writing.
- ✓ Utilized ICD-9 and ICD-10 codes to perform data analysis and generate meaningful insights that contributed to informed decision-making by medical practitioners and healthcare administrators.
- ✓ Experience in Data Lineage using Excel and Collibra.
- ✓ using SQL, Python, and Power BI to deliver actionable insights and automate reporting. Proven track record in reducing reporting time and driving data-based decisions.
- ✓ Experience working in Agile project environments, collaborating with teams through iterative development cycles, and adapting to changing business requirements while ensuring the successful delivery of data-related tasks.
- ✓ Provided recommendations based on data-driven insights to support business goals and objectives.
- ✓ Proficiently configured and administered Microsoft Team Foundation Server (TFS) to support comprehensive tracking of requirements, work items, bugs, deliverables, and builds.
- ✓ Involved in massive data profiling using IDQ (Analyst tool) prior to data staging.
- ✓ Worked with Informatica Data Quality toolkit, Analysis, data cleansing, data matching, data conversion, exception handling, and reporting and monitoring capabilities of IDQ 8.6.1.
- ✓ Analyzed data workflows and processes to identify opportunities for optimization and efficiency enhancement.
- ✓ Demonstrated mastery of SQL, effectively querying, and manipulating large datasets to extract actionable insights. Employed complex SQL queries, joins, and aggregations to retrieve and transform data from diverse sources.
- ✓ Utilized SQL to extract raw data from databases, performed data cleaning, transformation, and normalization processes. Translated complex business requirements into efficient SQL queries to ensure data accuracy and relevance.
- ✓ Extended knowledge of using VB.net and VBScript for data manipulation.
- ✓ Developed dashboards that showcased key performance indicators (KPIs), patient outcomes, and operational trends for informed decision-making.
- ✓ Utilized Power BI's advanced analytics capabilities, such as DAX (Data Analysis Expressions) language, to perform complex calculations, trend analysis, and forecasting.

Technical Skills:

- ✓ **Databases:** Teradata R12, R13, R14.10, MS SQL Server, DB2, Netezza, AWS RDS, Oracle, MySQL
- ✓ **Programming Languages:** C, Visual Basic, C++, VB 6.0, SQL, Hadoop (Hive, Pig), Python, R
- ✓ **Cloud Technologies:** AWS (EC2, S3), Azure
- ✓ **Scripting Languages:** MS-DOS, Bash, Korn
- ✓ **ETL Tools:** Informatica PowerCenter, SSIS, Ab Initio
- ✓ **Data Modeling:** Sybase Power Designer, IBM Data Architect
- ✓ **BI and Reporting Tools:** Business Objects, Cognos, SSRS, and Crystal Reports
- ✓ **Visualization Tools:** Tableau Desktop, Power BI, Python (Pandas, NumPy, Datorama)
- ✓ **ETL/Tracking Tools:** Informatica, SSAS, SSRS, and JIRA
- ✓ **Database Development:** T-SQL, SA, and Microsoft Hyper-V Servers
- ✓ **Testing and Defect Tracking Tools:** HP/Mercury (Quality Centre, Win Runner, Quick Test Professional, Performance Centre), Requisite, MS Visio, Visual Source Safe

- ✓ **Operating Systems:** Windows, UNIX, and Sun Solaris

Work Experience:

Spectrum Health, Grand Rapids, MI

May 2024 to Till Date

Data Analysis

Responsibilities:

- Developed detailed Business Requirement Document (BRD) and Functional Requirement Document (FRD) tailored for healthcare services, ensuring alignment with HIPAA regulations and stakeholder needs.
- Developed SQL queries to extract patient demographic and clinical data from the Epic EMR system (OLTP) and load it into the enterprise data warehouse, ensuring data integrity during the ETL process.
- Performed rigorous data validation within the enterprise data warehouse, comparing source system data with loaded data to identify and resolve discrepancies, ensuring accurate reporting and analysis.
- Created detailed source-to-target mapping documents to define data transformations and loading procedures for integrating claims data from external providers into the enterprise data warehouse.
- Conducted Joint Application Design (JAD) sessions with healthcare providers and stakeholders to define project scope, business flows, and assess system impacts, ensuring compliance with healthcare data privacy standards.
- Managed Electronic Data Interchange (EDI) transactions (270, 271, 834, 837, 835) for healthcare claims processing, ensuring accurate data exchange and adherence to HIPAA transaction standards.
- Developed insightful PowerPoint charts and visualizations to support senior leadership decision-making across strategic initiatives.
- Analyzed cross-functional Platform Health data to identify trends, outliers, and patterns, improving transparency and reporting accuracy.
- Supported Portfolio Management by validating investment data and tracking project health metrics.
- Collaborated closely with leadership to prepare communications for executive meetings and reviews.
- Ensured all project artifacts complied with HIPAA policies and guidelines, implementing stringent data security measures and conducting regular audits to protect patient health information (PHI).
- Developed and maintained star and snowflake schema structures tailored for healthcare analytics, enhancing data retrieval efficiency.
- Designed and optimized database structures for healthcare applications, collaborating with clinicians and database administrators to ensure efficient data storage and retrieval.
- Implemented data governance frameworks specific to healthcare data, including policies for data quality, integrity, and privacy, to maintain compliance with regulatory requirements.
- Conducted data mapping and logical data modeling activities for healthcare systems, using SQL queries to extract, transform, and analyze clinical and administrative data.
- Led the integration of EMR data with other healthcare data sources, ensuring consistency and accuracy in clinical decision-making.
- Conducted data mapping and logical data modeling activities for EMR systems using SQL, facilitating seamless healthcare analytics and reporting.
- Designed and implemented star and snowflake schema structures to optimize EMR data retrieval for analytics.
- Developed dimensional models (star and snowflake schemas) for healthcare analytics, optimizing data storage and retrieval.
- Supported regulatory compliance efforts by documenting comprehensive data lineage information and ensuring data traceability.
- Collaborated with IT, finance, and clinical teams to support data-driven initiatives and optimize claims management processes.
- Leveraged advanced analytical tools and software, including SQL, R, and Python, to extract meaningful insights from large and complex claims datasets.
- Developed and enforced data governance policies specific to healthcare data, ensuring that all data processes complied with HIPAA and other regulatory requirements.
- Conducted comprehensive data quality assessments on EDI (834, 837, 835) and claims data, identifying and addressing gaps to ensure clean, accurate datasets for analysis and reporting.
- Developed solutions based on clinical data standards such as HEDIS, contributing to the improvement of health measurement metrics and performance guarantees.
- Led projects to analyze gaps in care, creating actionable insights to improve patient outcomes and health service efficiencies.
- Conducted end-to-end Electronic Data Interchange (EDI) transactions (270, 271, 834, 837, 835) ensuring accurate data exchange and adherence to HIPAA transaction standards.
- Designed and implemented star and snowflake schema structures for healthcare analytics, optimizing data retrieval efficiency.
- Implemented data mapping and modeling initiatives that supported the development of star and snowflake schema structures for healthcare analytics, facilitating efficient data retrieval and reporting.
- Led ETL processes to centralize healthcare data from disparate systems, improving data consistency and supporting downstream analytics for improved patient care.
- Developed automated ETL (Extract, Transform, Load) pipelines to integrate healthcare data from disparate sources into centralized databases, improving data consistency and accessibility.
- Utilized advanced Excel features such as pivot tables, macros, and VBA scripting to automate healthcare data analysis and reporting tasks, enhancing operational efficiency.

- Created interactive dashboards and reports using BI tools like Power BI or Tableau, visualizing key healthcare metrics such as patient outcomes, utilization rates, and revenue cycles.
- Implemented predictive analytics models using healthcare data to forecast patient readmissions, identify high-risk populations, and optimize care management strategies.
- Collaborated with healthcare providers to integrate analytics solutions into clinical workflows, improving decision-making processes and patient care outcomes.
- Supported regulatory compliance initiatives by ensuring healthcare data governance practices aligned with HIPAA, HITECH Act, and other healthcare regulations.
- Conducted root cause analysis and troubleshooting of healthcare data issues, collaborating with IT teams to implement timely resolutions and minimize operational disruptions.
- Implemented advanced analytics techniques such as clustering and classification models on healthcare data to segment patient populations and personalize treatment strategies.
- Conducted thorough data validation and reconciliation to maintain data integrity and consistency across systems.
- Developed real-time data processing solutions using technologies like Apache Kafka or AWS Kinesis, enabling healthcare organizations to react swiftly to operational and clinical data streams.
- Designed and deployed scalable data pipelines using cloud-based solutions (e.g., AWS Glue, Azure Data Factory) to handle large volumes of healthcare data, ensuring reliability and performance.
- Conducted A/B testing and statistical analysis on healthcare data to evaluate the effectiveness of clinical interventions and operational changes, driving evidence-based decision-making.
- Optimized data models for performance by fine-tuning indexing strategies and considering denormalization where appropriate.
- Integrated natural language processing (NLP) techniques to extract insights from unstructured healthcare data such as physician notes and patient narratives, enhancing clinical decision support systems.
- Implemented data anonymization and pseudonymization techniques to protect patient privacy while allowing for secondary use of healthcare data in research and analytics.
- Conducted performance tuning and optimization on Databricks clusters to enhance query execution and job scheduling for healthcare analytics.

Geico Insurance, Indianapolis IN

Oct 2022 to April 2024

Jr.Data Analysis

Responsibilities:

- Collaborated with team members, product owners, and technical manager to gather requirements, and clarify requests with various meetings utilizing agile methodology.
- Analyzed policy and claims data within the enterprise data warehouse to identify trends in customer retention and claims costs, providing insights for business decision-making.
- Designed and implemented ETL processes using DataStage to populate the enterprise data warehouse with policy and claims data, supporting BI reporting and analytics.
- Developed Unix Shell Scripts to automate the Data Load processes to the target Data warehouse.
- Investigated and resolved data quality issues within the data warehouse, including inconsistencies in policy and claims data, collaborating with data owners and ETL developers.
- Data Warehouse is implemented using sequential files from various Source Systems.
- Developed Mapping for Data Warehouse and Data Mart objects.
- Design and Develop ETL jobs using the DataStage tool to load data warehouse and Data Mart.
- Responsible for interacting with stakeholders, gathering requirements, and managing the delivery.
- Administered Snowflake Data Cloud, managing user access, security configurations, and data storage.
- Performed Data analysis, statistical analysis, generated reports, listings and graphs using SAS Tools SAS/Base, SAS/Macros and SAS/Graph, SAS/SQL, SAS/Connect, SAS/Access.
- A scalable and highly available object storage solution for big data is done in Azure Blob storage.
- Created dynamic PowerPoint visuals and data tables to present complex findings in a clear and compelling format for stakeholder engagement.
- Partnered with the Technology Portfolio Management team to align data analysis with enterprise project objectives.
- Enabled leadership readiness for steering committee meetings through well-designed insights dashboards and executive summaries.
- Drove innovation by identifying emerging trends in platform performance and recommending improvement strategies.
- Developed ETL jobs using DataStage and Informatica and automated data load processes with Unix Shell Scripts.
- Administered Snowflake Data Cloud and managed user access, security configurations, and data storage.
- Experience working with SAP interfaces, integrating data across multiple systems, and ensuring efficient communication between SAP modules and external systems for seamless data flow.
- Developed Tableau Data visualization using heat maps, Scatter Plots, Geographic maps, Pie and bar charts, Symbol maps, Horizontal bars, histograms, Packed bubbles, and Candle stick stats.
- Written procedures, Functions, and SQL Logical statements for the data analysis.

- Effective in collaborating with business users, developers, and cross-functional teams to resolve data-related issues, while taking ownership of tasks in field mapping and build-out coordination.
- Agile Methodologies: Worked on all SDLC methodologies most importantly Agile Methodology.
- Demonstrated understanding of Software Development Life Cycle (SDLC)'s and use of version control systems SVN.
- Created SAS Macros for data cleaning and Reporting and to support routing processing.
- Conducted sprint planning and backlog refinement meetings using Jira boards
- Monitored project progress and identified potential issues through Jira reports
- Extensively worked on Azure Synapse analytics used & Spark cluster for processing data.
- Configured SQL mail agent for sending automatic emails when SSIS packages fails or succeeds
- Responsible for migrating legacy applications to AWS & Azure clouds and migrating to SaaS solutions.
- Design and develop ETL workflows and datasets in Alteryx to be used by the BI Reporting tool.
- Used Alteryx to perform data blending, created workflows to process data, and integrated with Tableau.
- Expertise in planning and executing functional unit tests, ensuring that data flows and mappings are accurate and meet the business requirements before final deployment.
- Developed complex visualizations reports using data from relational databases using Tableau Desktop.
- Developed normalized Logical and Physical database models to design OLTP system for insurance applications
- Responsible for validating Target data after applying different Informatica Transformations on the Source Data.
- Applied COBOL, JCL, and DB2 skills to analyze, develop, and maintain applications on IBM Mainframes.
- Prepare technical specifications and documentation for Alteryx workflows supporting BI reports.

Health Kon, India

April 2019 to July 2022

Data Analyst/BI Developer

Responsibilities:

- Experience in creating complex SSIS packages using proper control and data flow elements with error handling.
- Utilized Agile SDLC to manage and prioritize multiple projects, ensuring timely delivery and high-quality results.
- Formulated SQL procedures for data extraction from various healthcare systems (OLTP) to populate ETL/ELT pipelines, ensuring accurate and timely data integration.
- Conducted data discovery sessions with healthcare providers and administrators to gather data requirements and define data elements for reporting and analysis.
- Collaborated with the ETL development team to ensure accurate implementation of source-to-target mapping rules in Talend and SSIS ETL code, validating data transformations.
- Collaborated with cross-functional teams and created the BRD by gathering functional and non-functional requirements and translating business needs into data analysis projects.
- Developed and maintained comprehensive source to target data mapping documents, including field-level mappings, transformation rules, and data dependencies.
- Provided data profiling expertise and guidance to business stakeholders, supporting data-driven decision-making processes, and ensuring EDI data quality across the organization.
- Designed and delivered compelling PowerPoint presentations with charts, visuals, and summary tables tailored for leadership consumption.
- Played a key role in Portfolio Management, tracking tech investments and program health metrics to ensure alignment with business goals.
- Supported executive communications by translating complex datasets into actionable business insights.
- Collaborated cross-functionally to gather and refine disparate datasets, improving the accuracy and timeliness of health reporting.
- Utilized APIs to automate repetitive tasks, streamline data workflows, and integrate different systems.
- Formulated procedures for data extraction, transformation, and integration of health care data using ETL/ELT pipelines.
- Developed complex transformation logic using ETL tools like Talend and SSIS to ensure seamless migration of healthcare data formats.
- Developed SQL scripts to automate data validation processes, ensuring efficient and consistent verification of migrated data.
- Performed ad-hoc data analysis to support strategic decision-making processes, providing insights on cost-savin initiatives, reimbursement optimization, and budget forecasting.
- Conducted thorough data validation and User Acceptance testing with QA team for identifying and resolving data discrepancies and anomalies.
- Created visually appealing and interactive reports and dashboards using tools like Power BI and Tableau to present cost analysis findings to stakeholders.
