SUMMARY

- With more than 5 years as a Software Development Engineer in Test (SDET), I have expertise in designing, developing, testing, and maintaining automated test frameworks, web applications, RESTful APIs, and common libraries across diverse products and platforms.
- Demonstrated success as a SDET, exhibiting strong leadership in overseeing cross-functional teams to achieve project goals and elevate overall software quality.
- Skilled in optimizing CI/CD pipelines to enhance the reliability and scalability of software systems using Jenkins. Committed to staying abreast of emerging technologies and industry best practices to drive innovation and continuous improvement. My expertise encompasses both Agile and waterfall methodologies, test-driven development (TDD), and meticulous bug life cycle management.
- Focusing on the quality assurance (QA) life cycle, I excel in diverse testing domains, including functional, regression, black-box, and back-end testing, particularly within the insurance sector.
- My strategic test management involves crafting comprehensive plans, detailed test cases, and conducting thorough analyses. Proficient in SQL, I adeptly retrieve and validate data in databases, ensuring precision in testing processes.
- Utilized Azure DevOps, I analyse user stories, write test cases, identify bugs, and prepare detailed status reports. Leveraging profound domain knowledge in insurance, I facilitate effective communication among diverse stakeholders.
- My automation proficiency extends to creating data-driven test scripts and conducting Web Applications testing with Selenium, TDD, and BDD in Agile environments. Implemented the Cypress automation framework, emphasizing its superior efficiency in web element locating techniques when compared to Selenium.

COMPUTER & TECHNICAL SKILLS

Programming Languages: Skilled in Java, C++, C#, JavaScript, HTML, CSS, XML.

Databases: MySQL, Oracle, MS SQL, PostgreSQL.

Frameworks: Selenium, Cypress, Pytest, Page Object Model, Data Driven, Behaviour Driven, Test Driven, Jenkins;

Testing Tools: Selenium WebDriver, Selenium IDE, Selenium Grid, Katalon, Load Runner, Cucumber, Postman, SoapUI.

Project/Test-Management Tools: Jira, Azure DevOps, Rally, Bugzilla;

Agile Methodologies: Agile (Scrum, Kanban), Waterfall.

Tools & IDE: Microsoft Visual Studio, Visual Studio Code, Jupyter Notebook, PyCharm, IntelliJ IDEA, RStudio, Eclipse; **Testing Skills:** Black Box Testing, White Box Testing, Functional Testing, Unit Testing, Regression Testing, Performance Testing, API Testing, UI Testing;

Operating Systems: Windows (All), Mac OS (All);

Certifications:

Tricentis Tosca Fundamentals – Automating web application testing (AS1)

Quick Introduction to Postman and API Testing for Beginners

PROFESSIONAL AND TECHNICAL WORK EXPERIENCE

- Engaged in effective communication and collaboration with DevOps, QA, E2E, Business, Scrum Master, etc. to ensure alignment on test deliverables.
- Demonstrated proficiency in defect identification, logging, tracking, reporting, and retesting to bring issues to closure.
- Automated numerous backup jobs and operational tasks within the Backup infrastructure application Commvault using Python and Jenkins.
- Created and executed comprehensive test plans and test cases for Kafka-based applications to ensure the release of high-quality software.
- Utilized Pytest plugins to extend testing framework functionality and customize processes to meet project requirements.
- Analyzed test results, reported defects using bug tracking tools such as JIRA or Bugzilla, and collaborated with development teams for timely issue resolution.
- Conducted performance testing using Pytest-benchmark plugin to optimize critical code paths.
- Developed and maintained test suites and test plans using Pytest, contributing to the development of testing guidelines and best practices.
- Created and managed UFT Test Scripts based on requirements and scenarios.
- Coordinated test/defect management and triage functions, working cross-functionally to resolve issues and providing regular communication, escalating to leadership as necessary.
- Utilized SVN for maintaining and managing build scripts, test data, and other project-related documents.
- Estimated required resources and components for SOA testing, creating SOA design patterns for development.
- Performed testing of database applications developed with Oracle, Mongo, and Elastic Search.
- Developed Microservice onboarding tools using Python and Jenkins for easy creation and maintenance of build jobs and Kubernetes deployment and services.
- Developed gears, templates, and scripts required for specific application functionality using Python SDK.
- Designed and executed automated test cases using Tosca for functional, regression, and integration testing of web and mobile applications.
- Defined, developed, and executed automation test scripts using Java across functional, non-functional, and performance testing.
- Collaborated closely with cross-functional teams, including developers, product managers, and technical support, to identify and resolve issues related to Kafka data processing and message queuing.
- Prepared functional test cases using test design techniques such as equivalence partitioning and boundary value analysis.
- Used Apache JMeter for basic load and stress testing on web applications.
- Conducted Defect Tracking & Management and maintained daily reports using JIRA API.
- Wrote SQL queries for accessing data from the MySQL database.
- Validated HTTP responses using HTTP methods (Get, Put, Post, Delete) to perform REST API testing using Soap UI.
- Conducted Data Driven Testing using parameterization in UFT to test the application with different sets of data.
- Developed and maintained automated performance testing scripts using Tosca, analysing results to identify and report performance bottlenecks or issues.
- Enhanced and debugged automated test VB scripts in QTP for efficient and semi-automated testing.
- Worked in Python Integrated Development Environments like PyCharm.
- Implemented the Page Object Model (POM) to develop an End-to-End Automation Framework for Mobile App testing using Appium, TestNG, Maven, and Java.
- Built and implemented a framework for automation testing using Cypress, JavaScript, TypeScript, Mocha, Chai, and Postman for API testing.

- Created API automation test scripts using Postman API and consumed Asp.net web services in AngularJS using http and routing services.
- Used C# as a programming language and Visual Studio as an IDE for automating the Test Suite with Selenium WebDriver
- Worked in the performance team and conducted testing

QA Engineer
Citi Bank, Irving, TX

Nov 2022 - Dec 2023

- Managed application lifecycles using JAMF and Configuration Manager, ensuring seamless installs on Mac, Linux, and Windows.
- Got Exposure on Spring boot, core java, Java 8 and implemented java 8 feature. Worked on few Java backend tickets for enhancement of application.
- Automated configuration with PowerShell and Bash scripting for uniformity across operating systems.
- Contributed to app design, testing, and deployment, resolving issues in software functionality and printing services.
- Responsible for packaging and testing using JAMF and Configuration Manager for compatibility on Mac, Linux, and Windows.
- Played a key role in designing, testing, and deploying software applications, addressing printing services issues with custom scripts.
- Collaborated with engineers to troubleshoot potential bugs and provide general support.
- Assisted engineers in automating test sets with Jest e2e.
- Utilized monitoring tools such as Grafana and Prometheus to ensure Kafka system health and performance, identifying and resolving issues proactively.
- Conducted code reviews and provided feedback to QA team members on best practices for test automation and Tosca usage.
- Implemented automation frameworks for pilot web applications using Selenium in Java and Python.
- Developed and executed automated test scripts using Pytest, a widely used testing framework for Python applications.
- Conducted functional, integration, and regression testing with Pytest, resulting in reduced manual testing efforts and improved software quality.
- Collaborated with development teams to identify and prioritize test cases, ensuring comprehensive and effective defect catching.
- Utilized Continuous Integration (CI) systems like Jenkins and Travis CI to integrate Pytest into the development pipeline for automated test execution.
- Automated regression and smoke test suites using Cypress as the testing framework.
- Worked in DevOps, installing, configuring, and integrating automation scripts on CI/CD tools like Jenkins for nightly test suite execution. Gained knowledge in testing and configuring Amazon Web Services (AWS).
- Configured Selenium GRID and Jenkins server on AWS cloud machines, deploying the project on EC2 instances.
- Created stored procedures, indexes, views, and triggers using SQL Server.
- Developed and consumed web services to expose application functionality for different applications within and outside the company, implementing a Service-Oriented Architecture (SOA).
- Created functional automation scripts for the report generation module using Selenium WebDriver and TestNG.
- Participated in code reviews, design reviews, and team activities to ensure quality and consistency of Kafka-based applications.

- Worked on various applications using Python integrated IDEs such as Eclipse, IntelliJ, Sublime Text, and PyCharm.
- Tested applications on different browsers and platforms using Selenium RC (Java), Appium, tracked and documented defects.
- Used the Cypress Dashboard to generate performance metrics and engineered solutions for automation test improvement.
- Stayed updated with emerging technologies and best practices related to Kafka, message queuing, and data processing to continuously improve testing processes and ensure high-quality software releases.
- Implemented a Page Object Model Automation framework with Java, Selenium WebDriver, Python, and Cucumber with Ruby.
- Created automation scripts for mobile native applications on iOS and Android platforms using Appium and Java.
- Integrated SoapUI test suites for functional testing of SOAP web services.
- Worked with HTTP Client for Java-based Data Driven REST API automation framework using Apache POI API.
- Set up the Hybrid Automation framework using Java, Maven, Selenium WebDriver, TestNG, and Apache POI to execute test cases in multiple browsers and platforms.
- Implemented the Page Object Design Pattern along with Page Factory to drive Selenium scripts.
- Used Actions API, Capabilities, Firefox Profiles, and other functionalities to test AJAX and cross-browser testing using Selenium WebDriver.
- Engaged in all stages of the testing life cycle, TDD methodologies, SDLC using Agile/Scrum.
- Wrote Selenium scripts and automated using Selenium IDE, WebDriver, Java, TestNG, and log4j for automated testing.

QA Automation Engineer

Jun 2019 - Aug 2022

ValueMomentum/GEICO-Hyderabad, India

- Developed and managed end-to-end automation scripts for the GEICO application using Selenium WebDriver, ensuring UI elements, alignment, styling, and responsiveness were validated.
- Utilized Selenium WebDriver to create precise XPath expressions, establishing a robust automation framework for effective testing of web applications.
- Automated REST API testing using Postman, ensuring the dependability and effectiveness of API functionality for smooth communication with back-end systems.
- Conducted performance testing using JMeter to identify and fix performance issues, improving system efficiency and the user experience.
- Implemented a comprehensive testing approach, including integration, data-driven, functional, cross-browser, and regression testing to guarantee error-free web application functionality.
- Demonstrated proficiency in designing and implementing QA test strategy plans, adhering to software test life cycle (STLC) and agile methodologies.
- Actively participated in Scrum and other agile ceremonies, contributing to successful project delivery with high-quality results.
- Conducted system integration testing, quality assurance testing, and unit testing to uphold rigorous development standards and achieve a 98% customer satisfaction rate.
- Experienced in browser compatibility testing across different web browsers using Selenium WebDriver, leveraging HTML IDs and XPath locators.
- Produced comprehensive test documents, including test plans, scenarios, scripts, cases, and reports, throughout the project life cycle, ensuring extensive testing coverage and alignment with project requirements.

- Contributed to integrating Cypress into the testing framework, developing efficient test scripts and utilizing features like custom commands, parallel test execution, and continuous integration.
- As a Scrum team test lead, collaborated on requirement gathering, creating comprehensive test strategies and plans aligned with project requirements.
- Implemented and maintained robust QA processes and best practices, utilizing CI/CD pipelines for streamlined code integration.
- Assisted in debugging and troubleshooting Cypress tests, exploring its capabilities for cross-browser testing and generating comprehensive test reports.
- Utilized Azure DevOps for analysing user stories, crafting test cases, identifying bugs, and overseeing the entire process, gaining insights into the insurance domain.
- Applied practical knowledge in web application testing, regression testing, and implemented Java functionalities, leading to a 30% improvement in testability efficiency.

Intern/Junior Manual and Automation Engineer

Jan 2019 - Jun 2019

Genie Lamp, Hyderabad, India

- Designed and implemented automated test scripts using Selenium and Java for a web application, improving test coverage by 30%.
- Hands-on experience with automated testing tools such as Selenium WebDriver, JUnit/TestNG for Java applications.
- Wrote clear, concise, and comprehensive test plans and test cases.
- Conducted manual testing for application, identifying and documenting defects to enhance application quality.
- Participated in the development of a small-scale inventory management system, gaining hands-on experience in software development lifecycle phases.
- Basic knowledge of SQL and scripting to validate database impacts and to automate tasks.

EDUCATION

Master's Degree

Northern Arizona University, 2023

Flagstaff, United States

Bachelor's Degree

Malla Reddy College of Engineering, 2019

Hyderabad, India
