

Hanish Rao Saini Full Stack Developer

✉ hanish@mywebemails.com 📞 (623) 277-9237 📍 Santa Clara, CA 🔗 LinkedIn 🐙 GitHub

Profile

Highly skilled full-stack developer with 2+ years of experience in JavaScript, Node.js, Python, Microservices, and front-end technologies. Proficient in AWS and DevOps practices. Strong problem-solving, excellent communication, and collective team player. Passionate about delivering high-quality, scalable, and secure web applications that meet client requirements.

Skills

Front-end Technologies — HTML5, CSS3, JavaScript, React.js, Angular, Bootstrap, jQuery, AJAX, Redux, TypeScript

Back-end Technologies — Java, Spring Boot, Hibernate, Node.js, Express.js, Python, Django, Flask, MVC Framework, GraphQL, RESTful APIs, Maven, Micro-services, Gradle

Database — MySQL, MongoDB, PostgreSQL, MS SQL Server, Oracle, Redis, Elastic Search, Cassandra

Other Tools & Technologies — Git, Docker, Kubernetes, Jest, JUnit, AWS, Microsoft Azure, Nginx, Swagger, Apache Kafka, SCRUM, Jira, Linux, SDLC, Agile, Selenium, Cypress, FastAPI

Professional Experience

Full Stack Developer, IQVIA

08/2023 – 05/2024 | Remote, USA

- Created a user-friendly frontend using React and Redux, allowing healthcare experts to input patient data and view prediction results ensuring optimal use on various devices and across 150 healthcare experts used the application.
- Crafted backend using Node.js and Express.js, serving real-time predictions based on patient data, leveraging JavaScript libraries like Math.js for data processing, and ensuring efficient performance.
- Plotted a MongoDB database on AWS DocumentDB to store patient data to forecast results and use Redis to speed up data retrieval for efficient database schemas to optimize queries reduce latency by 40% and handle 1M patient records.
- Deployed the application on AWS using EC2, S3, EKS, and Lambda to ensure high availability and handle peak usage while maintaining 99.9% uptime and supporting over 5,000 concurrent users.
- Executed monitoring using Prometheus and Grafana to track performance and health, and set up automated testing with Jest and Mocha to ensure minimal downtime and rapid issue resolution within 30 minutes.
- Integrated Tableau for insightful visualizations and reports, used Git for version control and set up CI/CD pipelines with Jenkins to automate testing and deployment, reducing deployment time by 50%.

Software Developer, Wipro Pvt. Ltd

01/2021 – 07/2022 | Bengaluru, India

- Built a dynamic, responsive React front end for seamless navigation and interaction, supporting over 10,000 daily visitors with cross-browser compatibility and mobile responsiveness
- Crafted a RESTful API with Spring Boot, processing API requests daily while executing robust error handling and logging mechanisms, ensuring reliable transaction handling and user regime.
- Enforced a PostgreSQL database schema to store and manage product information, user data, and order histories this optimized database queries for faster data retrieval, helping real-time updates and easing page load times by 30%.
- Used JWT-based authentication, for secure access with role-based permissions to implement encryption for sensitive data and regular security audits, protecting user data and maintaining compliance with HIPAA regulations.
- Utilized Postman for API testing and documentation of microservices, ensuring endpoints were functional and well-documented for efficient integration and maintenance.
- Deployed the application on AWS, utilizing Docker for containerization to achieve 99.9% uptime by enforcing auto-scaling and load balancing, efficiently handling peak loads, and ensuring high availability.
- Utilized Git for version control and ran CI/CD pipelines with Jenkins, automating testing and deployment processes which dropped deployment time by 40% and assured uniform updates by automated unit and integration tests.

Education

Master of Science in Computer Software Engineering,

Arizona State University

08/2022 – 05/2024 | Arizona, USA

Bachelor of Technology in Information Technology,

Vardhaman College of Engineering

07/2017 – 05/2021 | Telangana, India

Projects

Project Grading Tool, ASU

- Developed a web-based grading tool using FastAPI, efficiently parsing uploaded CSVs with student and grading details.
- Utilized MongoDB to store mapped for over 7000 student and grading data, ensuring robust data management.
- Employed jQuery for a responsive UI and dynamic generation of tables, enhancing user interaction for 1000+.
- Implemented Jinja Templating for dynamic feedback with customizable deduction values, increasing grading precision.
- Integrated with Canvas to generate customizable CSV reports and deployed on AWS for scalable, reliable cloud hosting.

Cognitive based interactive blood bank, VCEH

- Engineered a secure, dynamic interactive blood bank system using Node.js, enhanced by cognitive computing.
- Utilized SQLite for stakeholder details and integrated UI with Telegram, and WhatsApp increasing engagement by 30%.
- Leveraged Google DialogFlow, an advanced NLP tool, to facilitate smooth and efficient communication.
- Implemented GPS tracking to locate nearby stakeholders, enhancing logistical support and user interaction.
