

Happy Patel

Software Engineer

Morristown, TN 37814 | happypatel1456@gmail.com | 401-218-0377

SUMMARY

Software Engineer with 2+ years of experience designing and delivering backend-heavy, cloud-native enterprise systems across regulated and high-availability environments. Specialized in Java and Python-based microservices using Spring Boot, REST APIs, and distributed data stores, with hands-on ownership of CI/CD automation, containerized deployments, and production reliability. Proven experience collaborating across product, QA, DevOps, and business stakeholders to translate complex requirements into scalable, secure, and maintainable systems in Fortune-level environments.

SKILLS

Methodologies: Agile Scrum, SDLC, Sprint Planning, Backlog Grooming, Release Management

Programming Languages: Java, Python, JavaScript, SQL

Backend & API Development: Spring Boot, Spring MVC, RESTful API Design, Microservices Architecture, Authentication & Authorization, API Security

Frontend (Supporting): React.js, HTML5, CSS3, JavaScript (ES6+), Responsive UI Development

Databases & Data Handling: MySQL, PostgreSQL, MongoDB, Schema Design, Query Optimization, Indexing, Transaction Management

Cloud & DevOps: Docker, Kubernetes, Jenkins, CI/CD Pipelines, Ansible, Environment Automation

Build & Dependency Management: Maven, Gradle

Testing & Quality: JUnit, Integration Testing, Code Reviews, Defect Resolution

Version Control & Collaboration: Git, GitLab, Bitbucket, Jira

System Design & Documentation: UML Diagrams, API Documentation, Technical Design Reviews

EDUCATION

Bachelor in Computer Science

Dec 2024

The University of North Carolina at Charlotte | Charlotte, NC

EXPERIENCE

DXC Technology, NC | Software Engineer

May 2024 – Current

- Designed and enhanced backend-centric enterprise applications using Java and Spring Boot, implementing modular service layers and REST APIs to support transaction-heavy business workflows with strict availability and reliability requirements.
- Owned data access and persistence layers using Spring Data JPA with MySQL, handling complex relational mappings, transactional integrity, and performance-critical queries for core business operations.
- Contributed to frontend integration using React.js and JavaScript, collaborating with UI teams to consume backend APIs and support data-driven dashboards and internal tools.
- Implemented and maintained CI/CD pipelines in Jenkins, automating build, test, and deployment workflows across multiple environments while coordinating release schedules with QA and DevOps teams.
- Actively participated in Agile Scrum ceremonies, breaking down technical requirements, estimating effort, resolving blockers, and delivering features incrementally in alignment with sprint goals.
- Enforced version control best practices using Git, participated in peer code reviews, and maintained clean branching and merge strategies across distributed development teams.

ServiceNow, USA | Software Developer

July 2023 – May 2024

- Developed scalable backend services using Python and Node.js, exposing RESTful APIs that supported internal enterprise workflows and high-volume data exchange between systems.
- Built and deployed containerized applications using Docker, collaborating with DevOps teams to ensure consistent deployments across development, staging, and production environments.
- Integrated backend services with MongoDB and PostgreSQL, designing schemas and optimizing queries to support analytics-driven features and reporting use cases.
- Automated infrastructure configuration tasks using Ansible, enabling repeatable environment setups and reducing manual deployment inconsistencies.
- Contributed to system design discussions and technical documentation, creating UML diagrams and architectural flows to communicate service interactions and data movement across teams.
- Supported testing and stabilization efforts by writing unit and integration tests, participating in defect triage, and assisting with production issue resolution.
