OBJECTIVE

Software Engineer with 2+ years of experience building scalable backend systems, distributed applications, REST APIs, and AI-powered solutions using Python, AWS, SQL, and cloud technologies. Experienced in designing reliable services, optimizing performance, and developing full-stack applications at scale.

SKILLS

Programming: Python, C++, Java, SQL, JavaScript

Backend & Web: Flask, Django, REST APIs, React

Cloud & DevOps: AWS (Lambda, EC2, S3, Cognito), GCP (Cloud Functions, Firebase), Docker, CI/CD (GitHub Actions)

Databases: PostgreSQL, MySQL, SQL Server, Redis, NoSQL

Systems & Architecture: Distributed Systems, Microservices, OOP, Design Patterns, Data Structures & Algorithms, API Optimization, Caching, Scalability

AI/ML: RAG, HuggingFace Transformers, Vector Databases (FAISS, Pinecone), LLM Integration

Testing & Tools: PyTest, Selenium, Postman, Git, GitHub, Linux, Jira

INDUSTRY EXPERIENCE

Software Engineering Intern, Yottasecure, California, US

Jan 2026- Present

- Developed Python backend services and REST APIs for scalable, containerized workflows across AWS EC2 infrastructure.
- Integrated cloud-based scanning pipelines using Rasa, OpenAI, and AWS Bedrock to automate scan execution, result processing, and security reporting workflows.
- Built Bash and Python automation scripts to trigger security scans, process vulnerability data, and improve operational efficiency of backend scanning systems.
- Improved scalability and reliability of backend security workflows through API integration, container orchestration, and automated processing pipelines.
- Designed backend workflows and API integrations supporting scalable vulnerability scanning across cloud environments.

IT Engineer Apprentice, Informatica Business Solution Pvt Limited, Bengaluru, India

Sep 2023 – Jul 2024

- Engineered Python data pipelines and CI/CD workflows using IICS, automating data ingestion, transformation, and validation; improved deployment efficiency 35% and reduced manual effort 40%.
- Designed and integrated REST APIs for real-time data ingestion and backend service orchestration, reducing API latency 25% and improving system reliability and throughput.
- Implemented automated backend testing and monitoring using PyTest, Postman, and Informatica Cloud dashboards, reducing deployment errors and enabling 15% faster incident resolution.
- Built scalable backend services for validation, routing, and processing of high-volume production data.
- Improved platform reliability through structured logging, monitoring pipelines, staged deployments, Agile collaboration, ensuring stable production releases.

Full Stack Development Intern, Tequed Labs, Bengaluru, India

Sep 2022 - Jan 2023

- Developed backend modules, RESTful APIs supporting production application workflows, improving application flow by 20%.
- Implemented frontend functionality using JavaScript and integrated APIs with backend services.
- Debugged backend service logic and optimized API request handling, improving system stability and reducing runtime errors.

Python Web Development Intern, Gowri Software Solutions Pvt Ltd, Bengaluru, India

Dec 2020 – Mar 2021

- Developed backend Flask APIs for authentication, session management, and CRUD operations.
- Optimized SQL queries and ORM data models to improve database performance by 20%.
- Implemented backend validation, error handling, security controls to improve system reliability and user authentication stability.

ACADEMIC PROJECTS

Semantic Movie Recommendation System (LLM-Based Search): *Python, PyTorch, HuggingFace Transformers (BERT, BART), Scikit-learn, Pandas, NumPy, Matplotlib, FAISS/Pinecone (vector databases)*

- Built a semantic search and recommendation system using transformer-based embeddings and large language model techniques.
- Implemented deep learning models to generate rich user-item representations, improving recommendation precision@10 by 12%.
- Developed scalable vector similarity search infrastructure using FAISS and Pinecone, enabling free-text recommendation queries with <200ms latency.
- Implemented retrieval-augmented generation (RAG) patterns and integrated LLM APIs (*HuggingFace*) for semantic search.

Distributed Multiplayer Backend Platform: *C++, Redis, PostgreSQL, Docker*

- Implemented service-to-service communication & caching layers to support concurrent player requests with low-latency responses.
- Built REST/gRPC APIs for communication between backend services and real-time game updates.
- Implemented Redis caching and optimized PostgreSQL queries, reducing response time by 30%.
- Containerized backend services using Docker and deployed them on Kubernetes for scalable workload management.

EDUCATION

University of Texas at Arlington, Arlington, TX

Master of Science in Computer Science

May 2026

GPA: 3.67/4.0
