Education

Arizona State University

Master of Science in Information Technology (Major : Information Systems Management)

Aug 2023 – May 2025

Tempe, Arizona

Ldrp Institute of Technology

Bachelor of Engineering in Computer Science

Aug 2018 – May 2022

Gandhinagar, India

Work Experience

Associate Software Engineer

August 2025 – Present

Dynamics Inc, Pittsburgh, USA

- Developed and maintained scalable applications using **C# and .NET**, applying modular design patterns and best practices to ensure performance, reliability, and long-term maintainability.
- Built **responsive user interfaces** with modern JavaScript frameworks, leveraging **TypeScript, HTML, and CSS** to deliver accessible, cross-platform user experiences.
- Designed and integrated **RESTful services** to enable seamless communication between client applications and backend systems, improving data processing efficiency by **25%**.
- Designed and optimized relational databases using **T-SQL**, including schema design, stored procedures, indexing, and performance tuning, achieving a **30% improvement in query execution times**.
- Worked in **Linux-based environments** to develop, test, and deploy applications, automating routine tasks with **shell scripting** to reduce manual effort by **30%**.

Software Developer Intern

May 2024 – August 2025

Brevitaz Systems, Dallas, USA

- Developed and deployed **enterprise-level applications** using **Java and .NET**, applying object-oriented design principles to build modular, scalable, and maintainable services.
- Built **responsive, user-focused web interfaces** with modern frontend frameworks, leveraging **TypeScript, HTML, and CSS** to ensure cross-browser compatibility and accessibility standards.
- Integrated client-side components with backend services through **REST-based interfaces**, enabling efficient data exchange and improving UI responsiveness by **25%** via optimized state handling.
- Deployed and supported **cloud-hosted applications** on distributed infrastructure, implementing scalable compute, durable storage, and automated workflows to support real-time data processing.
- Conducted **system monitoring, log analysis, and performance troubleshooting** in Linux environments, identifying bottlenecks and improving application stability and runtime efficiency.

Projects

Cloud-Based Task Management System

Description: Designed and developed a **cloud-hosted task management system** to support team collaboration, task assignment, and progress tracking. Implemented **RESTful backend services using .NET** to manage users, tasks, and notifications, and enforced **role-based access control** to ensure secure and authorized data access. Optimized data operations to support concurrent users and reliable performance.

Technologies: C#, .NET, REST APIs, Microsoft SQL Server, T-SQL, Linux, Git.

Project : Secure Digital Payments Platform

Description: Designed and implemented a **secure digital payments platform** enabling peer-to-peer transfers, bill payments, and transaction history tracking. Built **scalable backend services** and integrated **secure RESTful APIs** to process transactions in real time.

Technologies: Python, Node.js, RESTful APIs, AWS (Lambda, API Gateway, RDS), OAuth 2.0, JWT, Git.

Technical Skills

- **Programming Languages:** Python, Java, Swift, Objective-C
- **Cloud & Platforms:** Cloud-based application development (**Azure- and AWS-aligned**), RESTful service architectures, containerized services
- **Data & Datastores:** PostgreSQL, Redis, SQL querying, data modeling, transactional and analytical data workflows
- **AI / Machine Learning:** Large Language Models (LLMs), AI-assisted application features, ML integration, experimentation and evaluation
- **APIs & Security:** REST APIs, OAuth 2.0, JWT, secure authentication, data integrity and access control
- **DevOps & CI/CD:** Git-based version control, CI/CD pipelines (**Jenkins**), Docker, automated testing and deployments
