

Harshitha L

Software Quality Assurance Engineer

Manual Testing | API Testing | SQL | Enterprise Banking Applications

lakshmiharshithanarasimhaiah@gmail.com | +1 602 403 3320

Chandler, AZ

PROFESSIONAL SUMMARY:

Software Quality Assurance Engineer with 4+ years of experience delivering high-quality web and enterprise banking applications through manual and automation testing. Experienced in designing test strategies, validating REST APIs, performing backend data verification using SQL, and building reliable automation solutions with Selenium WebDriver, Playwright, Java, and TestNG. Skilled in Agile environments, collaborating with cross-functional teams to ensure stable releases across cloud-native applications using AWS, GCP, Jenkins, and Git. Passionate about improving software quality through scalable test automation and continuous testing practices.

TECHNICAL SKILLS:

- **Programming:** Java, SQL, Python, JavaScript
- **Test Automation:** Selenium WebDriver, Playwright, Cypress, TestNG, JUnit, Cucumber
- **Manual Testing:** Functional Testing, Regression Testing, Integration Testing, End-to-End Testing, Smoke Testing, Sanity Testing, User Acceptance Testing (UAT), Exploratory Testing, Database Testing, API Testing
- **API & Web Services:** REST APIs, REST Assured, Postman, SoapUI, JSON
- **Database & Backend Validation:** Oracle, SQL Server, PostgreSQL, MySQL, MongoDB
- **Cloud & DevOps:** AWS (S3, Lambda, EC2, API Gateway, CloudWatch), Google Cloud Platform (BigQuery, Cloud Storage, GKE)
- **CI/CD & Build Tools:** Jenkins, Maven
- **Version Control:** Git
- **Defect Tracking:** JIRA
- **Development Methodologies:** Agile Scrum, SDLC, STLC

PROFESSIONAL EXPERIENCE:

Morgan Stanley | Phoenix, AZ
Software Quality Assurance Engineer

Aug 2024 – Present

- Tested enterprise banking applications supporting customer onboarding, account management, payments, fund transfers, transaction processing, and reporting workflows, ensuring reliable functionality across critical financial systems.
- Designed and executed comprehensive functional, regression, integration, end-to-end, exploratory, smoke, and user acceptance tests for Agile sprint releases, identifying defects early and improving overall release quality.
- Validated RESTful APIs and microservices using Postman and REST Assured by verifying authentication, request/response payloads, business rules, status codes, and error handling across distributed services.
- Performed backend data validation using SQL and Google BigQuery to verify financial transactions, customer records, and business logic while investigating discrepancies across UI, API, and database layers.
- Developed and maintained Selenium WebDriver automation scripts using Java, TestNG, and Cucumber while executing Playwright regression suites to improve regression coverage and release confidence.
- Validated cloud-native applications deployed on AWS and Google Cloud Platform, including Google Kubernetes Engine (GKE), by verifying service integrations, deployment health, and end-to-end application workflows.
- Verified CI/CD deployments executed through Jenkins by performing post-deployment smoke, regression, and integration testing to ensure stable production releases.
- Investigated complex application issues by correlating user interface behavior, API responses, SQL query results, and cloud-hosted data to isolate defects and support faster root-cause analysis.
- Created and maintained reusable test data, test cases, execution reports, and Requirements Traceability Matrices (RTMs) to improve test coverage and release traceability.
- Collaborated with software engineers, business analysts, product owners, and DevOps teams throughout Agile ceremonies to clarify requirements, resolve defects, and ensure high-quality software delivery.
- Supported User Acceptance Testing by partnering with business stakeholders to validate new functionality, verify reported issues, and confirm production readiness.
- Performed production smoke validation following application deployments, ensuring business-critical banking workflows remained stable after every release.
- Managed the complete defect lifecycle using JIRA, documenting reproducible issues with detailed evidence, validating fixes, and confirming regression stability before release.
- Contributed to continuous quality improvement by identifying automation opportunities, strengthening test coverage, and

promoting best testing practices across Agile delivery teams.

Cognizant Technology Solutions | Bangalore, INDIA
Quality Assurance Analyst

Sep 2021 – Dec 2023

- Analyzed business requirements, user stories, and functional specifications to develop comprehensive test scenarios covering customer registration, account management, transaction processing, and reporting workflows.
- Designed and executed functional, regression, integration, smoke, sanity, exploratory, and end-to-end testing for enterprise web applications in an Agile Scrum environment.
- Validated REST APIs using Postman, REST Assured, and SoapUI by verifying authentication, request/response payloads, schema validation, business rules, and error handling.
- Performed backend data validation using SQL to verify application data, enforce business rules, and investigate discrepancies between the user interface, APIs, and database.
- Collaborated with developers and business analysts to clarify requirements, reproduce complex defects, and validate fixes before production deployment.
- Managed the complete defect lifecycle using JIRA, documenting reproducible issues with detailed evidence, coordinating resolution, and performing regression testing to ensure application stability.
- Maintained regression test suites and identified repetitive manual test scenarios suitable for automation using Selenium WebDriver.
- Supported Jenkins-based build validation by reviewing automated execution results and verifying application stability following deployments while using Git for version control.
- Prepared and maintained reusable test data, execution reports, defect summaries, and Requirements Traceability Matrices (RTMs) to improve testing consistency and release traceability.
- Assisted business users during User Acceptance Testing (UAT) by validating reported issues and confirming successful implementation of new functionality.
- Participated in Agile ceremonies including sprint planning, backlog refinement, daily stand-ups, retrospectives, and defect triage meetings to support timely delivery of high-quality software.
- Contributed to continuous quality improvement by strengthening test coverage, improving defect reporting, and promoting effective testing practices across multiple sprint releases.

EDUCATION:

Trine University | Phoenix, AZ
Master of Science in Information Studies
GPA: 3.8

Jan 2024 – Dec 2025
