PROFESSIONAL SUMMARY

Data Scientist / BI Developer with 3+ years of experience delivering predictive models, automating ETL workflows, and developing analytics dashboards across healthcare, tech, and cloud platforms. Proficient in Python, SQL, R and Power BI with hands-on expertise in time-series analysis, anomaly detection, and business-centric machine learning. Adept at communicating insights to non-technical stakeholders, deploying ML models to production, and collaborating across data engineering and product teams.

TECHNICAL SKILLS

Programming & Frameworks: Python (Pandas, NumPy, Scikit-learn, PySpark), R, SQL (T-SQL, MySQL, BigQuery), JavaScript

Machine Learning & Statistics: Regression, Classification, Clustering, Time Series Forecasting, Anomaly Detection, PCA, Ensemble Models, Neural Networks, Bayesian Modeling

ETL & Workflow Orchestration: SSIS, Azure Data Factory

Cloud Platforms: Azure, Google Cloud (GCP)

Data Visualization: Power BI, Tableau, Seaborn, ggplot2, Excel Power Query

Tools & DevOps: Git, VSCode, Jupyter, SSAS, OLAP Cubes

PROFESSIONAL EXPERIENCE

CCS Global Tech

Poway, CA [Remote]

BI Developer / Data Analyst

February 2021 – February 2024

- Designed and executed ETL pipelines using SSIS and Azure Data Factory, enabling seamless integration of structured healthcare and marketing data into cloud-based data warehouses.
- Engineered anomaly detection pipelines and time-series forecasting models to support operational monitoring and predictive analytics.
- Built interactive dashboards in Power BI, visualizing 20+ KPIs across sales, marketing and clinical domains.
- Contributed to internal tools and training documentation for ETL optimization while upskilling in PySpark and cloud-based ML workflows during inter-project periods.

Key Client Projects:

- **Google – Product Support Specialist | August 2022 – March 2023 (San Jose, CA)**
 - Optimized BigQuery ETL pipelines and PLX dashboards, reducing data latency by 40% for product analytics.
 - Worked closely with QA and engineering to design test cases, triage bugs, and improve data reliability.
- **UT Southwestern Medical Center – BI Developer | March 2021 – August 2022 (Remote)**
 - Implemented a 400GB healthcare data mart using Inmon methodology, improving clinical data query performance by 60%.
 - Developed 10+ SSIS packages for weekly incremental data loads from a 2TB OLAP warehouse.
 - Created Power BI dashboards monitoring critical healthcare KPIs including readmission rates and patient outcomes.

INDEPENDENT PROJECTS

Insurance Premium Prediction – Data Science Capstone | April 2025

- Built and evaluated multiple regression models using Python (Random Forest, Gradient Boosting) to predict insurance premiums from a dataset of 1M+ records.
- Engineered features and applied one-hot encoding and scaling for optimal model performance.
- Evaluated models using RMSE, MAE, and R-squared, and visualized outcomes with Matplotlib and Seaborn.

Bellabeat Wellness Technology Case Study – Coursera | November 2024

- Conducted EDA using SQL and R on Fitbit data to uncover user behavior patterns.
- Proposed personalized marketing strategies to enhance engagement and retention.

CERTIFICATIONS

Google Data Analytics Professional Certificate – Coursera | November 2024

Microsoft Power BI Data Analyst Associate Certificate – Microsoft | July 2023

EDUCATION

Texas Tech University

Lubbock, TX

Master of Science in Data Science | GPA: 3.9 / 4.0 | Expected May 2025
