Education

Indiana University, Bloomington, Indiana

Aug. 2024 – Present

Master of Science in Data Science

3.81/4 GPA

Charusat University, Anand, India

Oct. 2020 – May 2024

Bachelors of Technology in Computer Science Engineering

8.86/10 CGPA

Experience

Luddy SICE Indiana University Bloomington

November 2025 – present

Research Assistant in Data Science

Bloomington, IN

- Evaluated medical domain LLM outputs by analyzing unstructured clinical text data and assessing performance using standard NLP and learned metrics.
- Developing and implementing Python based evaluation scripts to mathematically derive and compute quality metrics for model-generated datasets.

Kelley School of Business, Indiana University Bloomington

May 2025 – present

Research Assistant in Data Science

Bloomington, IN

- Researched multimodal ML models to analyze emotions in marketing videos by integrating audio, text, and visual features, achieving higher accuracy than traditional LIWC-based methods.
- Developed a screen activity based emotion tracking system using DistilBERT and VADER Sentiment, deployed via Python and Streamlit, and delivered as a functional web application.

Kintu Designs Pvt. Ltd.

Jan 2024 – May 2024

Data Science Intern

Surat, India

- Developed OCR pipelines with OpenCV and Pytesseract to extract text from images and implemented Python ML projects using Streamlit.
- Built a full-cycle Formula 1 data analysis project, including data collection, modeling with linear regression, and visualization of predictions using Tableau and Streamlit.

Projects

Energy Consumption-Sustainability | Python, Power BI, Excel, Kaggle, VSCode, XGBoost

July 2024

- Built XGBoost time series forecasting model and performed EDA on hourly energy data, uncovering trends in AI driven energy consumption and sustainability; developed Streamlit web app to display insights.
- Built a web application displaying insights and future consumption trends using Streamlit.
- Link to Project

Formula 1 Web Application | Python, Streamlit, Tableau, Excel, VSCode

Dec 2023

- Led end-to-end development, including data collection, cleaning, exploratory data analysis, visualization, and linear regression modeling, delivered as a web application using Streamlit.
- Built a web app to visualize insights and predict race outcomes from Formula 1 data.
- Link to Project

Text to Image | Python, PyTorch, Super Computer, GAN, Deep Learning, CNN, TorchVision

Jan 2025

- Implemented the StackGAN architecture from research on IU's BigRed 200 supercomputer, training with the CUB dataset using PyTorch and TorchVision.
- Collaborated with team members to design and optimize all stages of the GAN training pipeline.
- Link to Project

New Article Text Analysis | Python, NLTK, Excel, BeautifulSoup, Google Colab

Nov 2023

- Scraped and processed online news articles; applied NLP techniques including topic modeling (LDA, NMF), clustering (Doc2Vec, SBERT), and readability metrics (Flesch, SMOG, Coleman-Liau)
- Analyzed sentiment, readability, and complexity with visualizations (word clouds, topic clusters, PCA) to uncover patterns in article classification.
- Link to Project

Skills

Programming & Databases: Python, SQL, MySQL, sqlite3, R, MongoDB, PostgreSQL

ML/DL Frameworks: Tensorflow, Pytorch, XGBoost, Scikit-learn, NumPy, Pandas, Langchain, PySpark

Data Visualization: Tableau, Power BI, Matplotlib, Plotly, Seaborn, Gephi

Tools & Others: Streamlit, Jupyter, Colab, Excel, OpenCV, NLTK, BeautifulSoup, Pytesseract, Docker, Jetstream2
