

Chicago, IL · (763) 477-2530 · jul.k.analytics@gmail.com · www.linkedin.com/in/iuliia-karpova/

Senior Data Analyst with 10+ years of experience including GE Capital, specializing in leveraging **advanced analytics, machine learning, and data visualization** to drive business growth. Technical toolkit includes **SQL, Python (scikit-learn, numpy, Pandas), SAS, Tableau, and ETL pipeline** development.

- **Data Analysis & Visualization:** Advanced proficiency in **Tableau, Python (Pandas, Matplotlib), MS Power BI** for complex data modeling
- **Process Optimization:** Implemented **automated reporting systems** and **dashboards** reducing manual work
- **Database Management:** Experience with **SQL, SAS, and Excel VBA** for large-scale data analysis

KEY ACHIEVEMENTS

- Built a program for customers with limited credit history, young generation and recent immigrants. Credit team approved 6% more applicants in this new market segment.
- Developed COVID-19 impact model that predicted which industries would face hardship. Collection teams used this to offer payment plans before customers defaulted.
- Rebuilt e-commerce analytics platform using Salesforce for 1.5M customer transactions. Sales team got weekly insights instead of monthly, catching promotion opportunities they were missing.
- Built loan performance dashboards in Tableau that tracked 30+ KPIs across acquisition, approval, and payment stages.
- Created a customer value model using machine learning that analyzed spending patterns across 3 years of transaction data.

Expertise in **analytical solutions development, statistical analysis, data visualization, customer segmentation, performance optimization, and cross-functional leadership.**

PROFESSIONAL EXPERIENCE

OVERGEAR, Chicago, IL

January 2023 – March 2025

E-commerce platform with over 1.5 million active users

SENIOR DATA ANALYST

Key project with Sales and Marketing departments during platform expansion phase

- Built a Salesforce analytics system that processed 100,000+ monthly transactions across 3 product categories for team leaders to receive reports weekly instead of monthly, identifying \$2M in missed revenue opportunities.
- Created 5 interactive dashboards showing customer journey metrics from acquisition through retention to help finance to adjust marketing budget allocations, marketing tracked campaign performance, and sales monitored conversion rates.
- Implemented custom SQL data pipeline that automated weekly reporting on cart abandonment and price sensitivity.

EdTech: Capstone Project with Connexus Energy, an electric cooperative in Minnesota serving over 138K members across 9K miles of electric lines.

- Analyzed 5 years of equipment failure data covering 9,000 miles of electric lines to create a predictive model for maintenance scheduling.
- Built a machine learning model that identified equipment likely to fail within 90 days based on usage data, maintenance history, and weather patterns.
- Redesigning a field crew dispatch tool that helped maintenance teams prioritize at-risk locations, reducing unplanned outages by 10%.

SBER

May 2018 – June 2022

Company serving 96M retail customers, managing \$500B+ in assets, with multi-vertical ecosystem across banking, e-commerce (SberMarket), healthcare (SberMedAI), media (Okko), transportation (Citymobil), food delivery, cloud computing, cybersecurity, and business services

SENIOR DATA ANALYST

- Built an economic forecasting model during COVID-19 that tracked industry-specific default patterns. When competitors pulled back from the market, our risk team used this model to maintain lending with confidence while reducing expected credit losses.
- Restructuring team needed a better way to identify borrowers who would succeed with payment modifications. Created a random forest model that analyzed payment history, resulting in 11% more successful payment plans without increasing risk.
- Cut A/B testing analysis time from 2 weeks to 3 days by developing standardized testing platforms. This allowed product teams to run more tests simultaneously and implement winning strategies faster.
- Seasonal fluctuations in mortgage applications created staffing problems. Developed a forecast model analyzing macroeconomic trends that helped operations prepare for demand spikes.
- Developed a data analytics framework that decomposed complex business metrics into key performance drivers, enabling more precise estimations and creating clear visualizations.
- Connected previously siloed data across banking, e-commerce, and transportation verticals through SQL and Python pipeline.
- The Tableau dashboard ecosystem I created tracked 30+ KPIs across the customer journey, from acquisition through retention.

Awards: Lauded by Chief Risk leadership for the personal contribution to the development of the consumer risk management.

SOCIETE GENERALE

April 2016 – May 2018

French multinational bank serving 29M global customers with over €1.4T in assets

SENIOR DATA ANALYST

- Faced with a gap in applicants with limited history market, led end-to-end project to create new customer segment with minimal historical data. Managed initiative from concept through launch, opening new revenue stream with 6% higher approval rates.
- Designed an automated alert system that identified high-potential customers for targeted offers.

- Seasonal income and demand patterns created verification bottlenecks for loan applications. By analyzing historical trends, implemented an adaptive verification strategy that improved lending volume by 12% without compromising quality checks.
- Built Power BI dashboard using DAX formulas that unified data from five separate systems. For the first time, underwriting managers could see real-time KPIs showing application volume, approval rates, and risk indicators in a single view.
- Bank needed competitive intelligence on market positioning. Created an analytical framework that benchmarked our performance metrics against competitors using third-party data. Leadership used these insights to refine product features and pricing strategy.
- Worked across department boundaries using Agile methodology. Managed complex project documentation through JIRA and Confluence, ensuring transparency for stakeholders in Marketing, Technology, and Operations.

VTB

May 2014 – April 2016

Company with digital transformation focus, operating across 15 countries in Europe, Asia, and Africa, serving 14M+ customers through retail, corporate, and investment banking verticals with \$201B in assets

SENIOR DATA ANALYST

- Designed A/B testing framework with statistical validation protocols that standardized experiment design across product teams. First set of optimized strategies increased approval rates by 3% without affecting risk levels.
- Built a decision tree segmentation model that identified high-value customer clusters based on transaction patterns and payment behavior.
- Developed an early warning system using behavioral analytics that flagged accounts showing signs of reduced activity. Relationship managers used these alerts to intervene before customers left, improving retention metrics.
- Conducted factor analysis of portfolio drivers and operational costs using SQL and Excel, revealing previously hidden correlations.

GE CAPITAL

March 2012 – May 2014

Financial services unit of General Electric, providing commercial lending and leasing across 35+ industries with \$365B in assets

DATA ANALYST

- Accelerated time-to-action by 30 days and improved operational efficiency for a key business segment by developing a customer segmentation model that prioritized high-value clients.
- Increased customer engagement rates by 8% by redesigning outreach strategy, leveraging analytics to optimize timing, messaging, and prioritization based on propensity-to-engage scores.
- Built Excel dashboards with pivot tables and advanced formulas to monitor portfolio performance.
- Built SQL data marts for behavioral scorecard development across personal loans portfolio.

Awards: Honored with executive commendation for delivering mission-critical initiatives that drove substantial business value.

EDUCATION

Master's Degree in Business Statistics, University of St. Thomas, Minneapolis

Master's Degree in Computer Science, Kazan State University

Bachelor's Degree Computer Science, Kazan State University

PROFESSIONAL DEVELOPMENT

FRM, in progress

Agile Decision-Making, Duke University

QlikView Developer & Designer, Qlik Learning

SAS Enterprise Miner, Applied Analytics, SAS Institute

SKILLS

Data Analysis & Visualization: SQL (JOINS, CTEs, Window Functions), Python (Pandas, NumPy, Matplotlib, scikit-learn), SAS EG, SAS Miner, Tableau, Power BI, Excel (VLOOKUP, Pivot Tables, Power Query), Jupyter Notebooks, PowerPoint

Machine Learning & Statistics: Statistical Analysis, A/B Testing, Hypothesis Testing, Customer Segmentation, Clustering, Regression Analysis, Forecasting, R, MATLAB

Business Intelligence: Dashboard Design, KPI Definition, Performance Metrics, ETL Processes, Data Modeling

Technical Platforms: JIRA, Confluence, Snowflake, Git, Alteryx, Big Data Technologies (Hadoop, Spark, GreenPlum), Databrick, Database Management Systems (PostgreSQL, MS SQL Server, Teradata, MySQL)

Competencies: Data-Driven Decision Making, Portfolio Performance Analysis, Strategy Development, Cross-Functional Collaboration, Stakeholder Management, Predictive Analytics, Credit Risk Management, Agile Methodologies, Process Optimization
