Senior Data Analyst
[LinkedIn](#)

PROFESSIONAL SUMMARY:

- Over 5+ years of experience delivering data analytics, engineering, and business intelligence solutions across insurance, healthcare, banking, and e-commerce domains, supporting enterprise decision-making and data-driven strategies.
- Strong expertise in SQL, Python, and big data platforms to extract, transform, and analyze large-scale datasets supporting business reporting, analytics, and operational performance monitoring.
- Experienced in gathering business requirements, documenting functional specifications (BRD/FRD), and translating stakeholder needs into analytical and technical solutions supporting enterprise data initiatives
- Experienced in gathering business requirements, documenting functional specifications (BRD/FRD), and translating stakeholder needs into analytical and technical solutions supporting enterprise data initiatives
- Experienced in developing scalable ETL/ELT pipelines integrating multiple enterprise systems to support data ingestion, transformation, and analytics across distributed data platforms.
- Hands-on experience performing data validation, reconciliation, and quality checks to ensure accuracy, consistency, and reliability of business and analytical datasets.
- Strong experience building SQL-based data profiling queries and Python validation scripts to validate data conversion, reconciliation, and accuracy across enterprise migration and data integration projects.
- Experienced in identifying requirement gaps, documenting remediation strategies, and collaborating with business analysts and data engineers to ensure successful data migration and system conversion validation.
- Skilled in collaborating with cross-functional stakeholders including business teams, developers, QA, and data engineers to translate business requirements into technical data solutions.
- Developed interactive dashboards and executive reports using Power BI and Tableau to monitor KPIs, operational metrics, and performance trends.
- Strong experience performing customer segmentation, market trend analysis, and behavioral analytics using CRM and enterprise data platforms.
- Experience analyzing customer engagement and segmentation datasets to support targeted marketing initiatives, campaign performance analysis, and customer behavior insights across CRM and analytics platforms.
- Collaborated with business and marketing stakeholders to validate segmentation logic, monitor campaign performance metrics, and improve targeting strategies using SQL-driven analytics.
- Experienced in performing gap analysis, root cause analysis, and SWOT assessments to identify operational inefficiencies and support strategic improvements.
- Proficient in writing complex SQL and PySpark queries for large-scale data extraction, transformation, aggregation, and reporting.
- Experienced in designing data models, source-to-target mappings, and data lineage documentation supporting enterprise data governance initiatives.
- Strong experience working in Agile environments, participating in sprint planning, backlog grooming, and cross-functional collaboration.
- Expertise in optimizing data pipelines and big data workloads using partitioning, optimized file formats, and query tuning techniques.
- Hands-on experience integrating cloud data platforms including Azure and AWS to support scalable analytics and reporting solutions.
- Experienced in ensuring secure handling of sensitive data including PII and PHI through governance frameworks, encryption, and data masking techniques.
- Strong analytical and problem-solving capabilities with focus on data validation, enterprise data migrations, and financial domain analytics including banking and lending datasets.

CERTIFICATIONS/TRAINING:

[**AWS Certified Cloud Practitioner**](#)

Aug 2024 - Aug 2027

TECHNICAL SKILLS:

Business Intelligence & Data Visualization	Power BI, Tableau, QlikView, Matplotlib, Seaborn, Interactive Dashboarding, Executive Reporting, Oracle Analytics Cloud (OAC)
Programming & Data Analysis	Python (NumPy, Pandas, Data Validation Scripts), R, Advanced SQL (Data Profiling, Data Validation, Data Reconciliation), PostgreSQL, SQL Server, HiveQL, Scala
Big Data & Data Engineering	Apache Hadoop, Spark, Hive, Pig, Sqoop, ETL Tools (SSIS, Informatica, Alteryx, Talend), Data Warehousing (Snowflake – used for metric reporting & ETL optimization, Redshift, SQL Server, AWS S3), Kafka
Cloud Computing & AI Solutions	Azure (Data Factory, Synapse, ML, Cognitive Services), AWS (S3, Redshift, SageMaker), AI-driven Analytics, Machine Learning Models, Apache Spark ALS
Data Governance & Management	Collibra, Ataccama, Informatica Data Quality, Master Data Management (MDM), PostgreSQL, MySQL, NoSQL, Regulatory Compliance
Marketing & Campaign Analytics	Customer Segmentation, Campaign Performance Analysis, Marketing Data Analytics, Audience Targeting, Campaign Reporting, Customer Behavior Analysis
Project Management & Process Modeling	Agile (Scrum, Kanban), Waterfall, JIRA, Confluence, Git, Business Analysis (BRD, FRD, GAP Analysis, SWOT, Process Mapping), Visio, Lucidchart
CRM & Market Analysis Tools	Salesforce, Client Master Data Hub, MARS (Market Asset Reporting System), Google Analytics, Customer Segmentation, Market Trend Analysis
Documentation & Reporting	Excel, PowerPoint, SharePoint, Confluence, Report Automation

PROFESSIONAL EXPERIENCE:

Client: Equitable, Charlotte, NC

June 2025 – Present

Role: Senior Data Analyst

Roles & Responsibilities:

- Designed scalable data pipelines to ingest and transform policy, premium, and claims datasets from SFTP and JSON sources into enterprise Data Lake and EDW platforms.
- Assisted business teams in gathering requirements, documenting process flows, and translating business needs into functional specifications supporting enterprise data modernization initiatives.
- Collaborated with business stakeholders and actuarial teams to gather requirements and translate business logic into technical data processing workflows.
- Built automated ETL pipelines integrating systems including MDM, PCS, PHI, and commission systems to ensure consistent enterprise data integration.
- Built SQL-based data profiling queries and Python validation scripts to validate data conversions, reconciliation, and accuracy across upstream and downstream enterprise systems.
- Collaborated with business analysts and data engineers to validate data conversion logic, identify requirement gaps, and document remediation steps ensuring successful system migration and data quality validation.
- Optimized PySpark and Hive queries by tuning partitions, restructuring transformations, and improving processing efficiency.
- Partnered with infrastructure teams to validate secure data transfers and maintain reliable ingestion pipelines using SFTP connectivity.
- Conducted detailed data analysis to identify data quality issues and support improvements in enterprise reporting datasets.
- Analyzed customer behavioral datasets to support segmentation analysis and reporting used by marketing and business teams for targeted engagement strategies.
- Developed analytical datasets and dashboards to monitor customer engagement metrics and support data-driven marketing initiatives.
- Supported enterprise data modernization initiatives by designing scalable and cloud-ready architecture aligned with big data platforms.

- Implemented CI/CD pipelines using Azure DevOps and Git to automate deployment and monitoring of ETL workflows.
- Ensured secure handling of sensitive PHI and PII datasets through encryption, masking, and governance compliance frameworks.
- Troubleshoot data ingestion and transformation issues using PySpark logs, Hive queries, and SQL-based reconciliation techniques.
- Performed gap analysis and root cause analysis to identify operational inefficiencies in enterprise data processing workflows.
- Authored detailed documentation including STTM mappings, workflow diagrams, and integration specifications for enterprise data pipelines.
- Maintained modular PySpark code repositories with version control and peer code review processes.
- Evaluated cloud services such as AWS Glue and Lambda to support automation and scalable analytics infrastructure.

Environment: PySpark, Hadoop, Hive, HDFS, Azure Data Lake, Azure DevOps, AWS Glue, AWS S3, AWS Lambda, SQL, HiveQL, ETL Pipelines, JSON, SFTP, EDW, MDM, PCS Systems, Git, CI/CD, Data Validation, Data Governance, Agile

Client: OneData Software Solutions

AUG 2024 – Dec 2024

Role: Senior Data Analyst

Roles & Responsibilities:

- Analyzed Life & Annuity insurance datasets across underwriting, claims, and policy workflows using SQL and Python to generate operational insights.
- Conducted business process analysis to identify operational inefficiencies and recommended improvements through data-driven insights and optimized reporting workflows.
- Collaborated with business stakeholders to gather analytical requirements and translate them into BRDs, FRDs, and STTM documentation.
- Developed Power BI and Tableau dashboards to visualize policy performance metrics, claims trends, and operational KPIs.
- Performed customer segmentation analysis using SQL and Python to identify behavioral patterns and support targeted marketing and customer engagement strategies.
- Built dashboards in Power BI to monitor campaign performance metrics including customer engagement trends and conversion indicators.
- Analyzed customer behavior datasets to support marketing analytics initiatives and improve targeting strategies.
- Designed and automated ETL pipelines using Azure Data Factory and Informatica to streamline enterprise reporting workflows.
- Integrated structured and unstructured datasets into Azure Blob Storage and Azure Synapse analytics platforms.
- Performed data profiling, cleansing, and validation to ensure consistency and accuracy of enterprise datasets.
- Optimized SQL queries and database performance to improve reporting efficiency and reduce processing latency.
- Built predictive analytics models supporting claims forecasting, fraud detection, and customer segmentation initiatives.
- Automated data processing workflows using Azure services to improve operational efficiency and reporting accuracy.
- Executed migration of legacy data systems to Azure Synapse enabling scalable cloud-based analytics.
- Implemented enterprise data governance standards using Collibra and Informatica to manage metadata and lineage.
- Developed technical documentation and trained business users on dashboards and reporting tools.

Environment: SQL, Snowflake, Python, Tableau, Power BI, Azure Data Factory, Azure Synapse, Azure Blob Storage, Azure SQL DB, Azure Databricks, Azure Machine Learning, Informatica, Collibra, ETL Pipelines, Predictive Analytics, SharePoint, Confluence

Client: Cognizant

May 2019 to May 2023

Role: Data analyst

Roles & Responsibilities:

- Developed predictive analytics models using AWS SageMaker to forecast healthcare utilization and patient admission patterns.
- Built Tableau dashboards to visualize patient outcomes and operational healthcare KPIs.
- Managed large healthcare datasets within AWS Redshift supporting scalable analytical workloads.
- Implemented recommendation models using Apache Spark ALS to analyze patient treatment patterns.
- Automated data preparation and reporting workflows using Alteryx improving operational reporting efficiency.
- Implemented HIPAA-compliant data governance policies to ensure secure management of healthcare datasets.
- Migrated legacy healthcare systems and EHR datasets to AWS cloud infrastructure.
- Performed data profiling, cleansing, and ETL optimization using Informatica and SQL
- Implemented Spark-based data processing pipelines to analyze large-scale healthcare datasets.
- Collaborated with clinicians, data scientists, and IT teams to deliver data-driven healthcare analytics solutions.

Environment: AWS SageMaker, AWS Redshift, AWS Cloud, Apache Spark, Spark ALS, Tableau, Alteryx, Informatica, SQL, EHR Systems, HIPAA Compliance, Data Governance, ETL Pipelines, Healthcare Analytics

Client: Wipro

Nov 2017 to Apr 2019

Role: Data analyst

Roles& Responsibilities:

- Extracted and analyzed healthcare operational datasets using complex SQL queries to support reporting and business decision-making.
- Developed ETL workflows using SSIS to integrate and transform data across multiple healthcare systems.
- Built Power BI dashboards to monitor provider performance, claims metrics, and operational KPIs.
- Performed data cleansing and validation to maintain reliable and accurate analytics datasets.
- Developed database views, stored procedures, and optimized SQL queries to improve reporting performance.
- Automated operational reports reducing manual data processing and improving reporting efficiency.
- Managed secure data transfers through FTP ensuring reliable ingestion of healthcare datasets.
- Monitored data integrity and resolved inconsistencies through SQL-based troubleshooting.
- Documented ETL workflows and SQL processes to support collaboration across analytics teams.
- Delivered operational insights and reports supporting healthcare stakeholders and business teams.

Environment: SQL Server, SSIS, SSRS, Power BI, FTP, Data Cleansing, Data Transformation, ETL Workflows, Healthcare Data Analytics

Education:

- Master's in data science from University of Newhaven, 2024.
- Bachelors from Sri Indu college of engineering and technology 2017.
