Professional Summary

Demandware (Salesforce Commerce Cloud – SFCC) Backend Developer with **6+ years of total IT experience**, including **4+ years of specialized expertise in SFCC**. Delivered **5+ end-to-end eCommerce implementations** across **Homepage, PDP, PLP, Cart, and Checkout** modules. **Expert in SFRA architecture, ISML templates, Controllers and scalable eCommerce application design.**

Proficient in **Business Manager administration, site configurations, and catalog management**. Strong hands-on experience with **SCAPI and OCAPI**, including custom API development for headless commerce integrations. Skilled in building and customizing Page Designer components, enforcing SFCC coding standards, and optimizing site performance. Proficient in **GitHub**. Experienced with **Atlassian JIRA** and committed to **Agile methodologies**. Passionate about **building high-performance, data-driven eCommerce solutions** and continuously adopting evolving **SFCC best practices**.

Education & Certification

Bachelor of Technology in Computer Science and Engineering
GMRIT, Rajam, Andhra Pradesh, India | Graduated: 2017

Salesforce Certified B2C Commerce Cloud Developer (Active)

Salesforce Certified Data Cloud Consultant (Active)

Salesforce Certified AI Associate (Active)

Salesforce Certified Agentforce Specialist (Active)

Technical Skills

Commerce Platform:	Salesforce Commerce Cloud (SFCC)
Programming Languages:	Java, C
Scripting & Web Technologies:	JavaScript, jQuery, Node.js, AJAX, JSON, XML, HTML5, CSS
Database Management:	MySQL
Development Tools & Environments:	GitHub, Git Bash, SourceTree, Visual Studio Code, Eclipse, Atlassian JIRA, Confluence, Business Manager (Demandware), Google Assistant

Professional Experience

Solveda Software India Pvt Ltd – SFCC Backend Developer

April 2023 to Current

BIBA:

- Built a **custom catalog management module for Store Managers**, enabling **store-level** product visibility and filtering — reducing catalog update time by **30%** and improving operational control.
- **Implemented a country-state mapping feature** to enhance location-based data accuracy and improve user form experience and increased internal workflow efficiency.
- **Engineered an interactive image flyout in the header mega menu**, enhancing visual appeal, navigation efficiency, and overall user engagement.
- **Troubleshoot and optimized order and refund processes**, resolving production issues to increase operational efficiency and deliver a seamless customer experience.
- Integrated **Google Tag Manager (GTM) and Google Analytics 4 (GA4)** across **all pages and key functionalities**, implementing comprehensive event tracking and **dataLayer**

configurations to capture detailed user behavior and enable data-driven insights for **performance optimization**.

Lisbon Demo Mobile App:

- Integrated **headless commerce architecture** using **SCAPI**, enabling seamless connectivity between the mobile app and backend systems.
- **Designed and implemented a custom API** for dynamic content asset retrieval and configuration, improving content management efficiency by **35%**.
- Performed **API discovery and integration** for homepage (Page Designer components), PDP, size chart, and cart item-level details, **reducing future module integration time by 20%**.
- Streamlined collaboration between **frontend** and **backend** teams, accelerating feature delivery by **15%** and improving overall development workflow.

HOAD:

- Built **configurable Page Designer components** in Business Manager to empower content teams, reducing dependency on developers by **40%**.
- Led the implementation of **password-less login** feature, improving user authentication speed by **45%** and boosting conversion rate.
- Investigated and resolved **order issues**, improving production stability and cutting issue turnaround time by **35%**.
- Optimized **search bar** and **header** components, improving site navigation efficiency and reducing bounce rates by **20%**.
- **Developed and configured blog listing and detail page layouts** in Page Designer to enhance content presentation and user experience.
- **Developed a responsive Page Designer feature** that dynamically renders **video on mobile** and **image on desktop**, enhancing cross-device content engagement.
- **Developed dynamic banner functionality on the PLP**, enabling top carousel display based on category ID and mid-page banners with precise, position-specific placement for improved content targeting.
- Developed a automated **horizontally infinite loop product tile** component, improving product visibility and enhancing user interaction.
- Developed a **dynamic** ticker component powered by content slots, customized to display **location-specific** content.
- **Built a store availability feature** on the PDP, enabling customers to check local inventory in real time and enhancing the omnichannel shopping experience.
- **Engineered a data-driven Size Guide module** on the PDP to dynamically present garment and body measurements, enhancing user experience and **reducing size-related returns**.
- Engineered **interactive PLP enhancements**, including **Quick Filter** and **Quick Add** features, enabling users to add items directly to cart and proceed to check-out for **faster order completion**, improving overall user experience and conversion efficiency.
- **Customized the category filter** to support **multi-category selection**, enabling users to quickly navigate to their desired product categories and reducing **product search time**, significantly **minimizing navigation time** and improving overall **shopping experience**.
- **Enhanced site SEO performance** through technical optimizations and best practices, leading to improved crawlability and faster page rendering.
- **Optimized overall site performance** by enhancing **page speed**, metadata structure, and technical configurations, **resulting in improved search rankings and user experience**.
- Implemented an **end-to-end loyalty management feature**, including a detailed **Loyalty Page** and **cart-level integration** to track earned, redeemed, and pending points; introduced a **category-based tier** system to motivate users to spend more and advance to **higher reward levels**.

HMC:

- Engineered a modular **category landing page** with **multiple interactive components**—carousel banners, category tiles, web spider rings, bestseller carousel, reviews, and blog sections—improving navigation, **user engagement, and product visibility**.
- Developed a **vintage product attribute** that prevents purchase by disabling “Buy Now” on Product Detail and Listing Pages, ensuring **accurate product availability and presentation**.
- **Customized the OTP login flow**, implementing validation and security enhancements to ensure seamless and secure user authentication.
- **Developed “Notify Me” and “Coming Soon” functionalities**, enabling users to receive alerts for out-of-stock or upcoming products, improving engagement and retention.
- Engineered **multiple form customizations** with **Zoho and Data Sense** integrations, enabling **real-time data synchronization**, reducing **manual effort**, and **improving operational efficiency & accuracy**, which streamline backend processing.
- **Engineered personalized user-specific promotions and coupons** that bypass shipping charges, enhancing user satisfaction and boosting conversion rates.
- **Developed and customized accordion components** for Product Details, Return, and Exchange sections on the PDP, enhancing usability and content accessibility.

LTIMindtree – SFCC Backend Developer

July 2021 to April 2023

GP SFCC Connectors:

- **Implemented payment integrations and local payment methods (LPMs)** for multiple countries in SFRA, ensuring smooth and compliant transaction workflows.
- **Developed and tested API calls** across various country and currency combinations using Postman to validate payment functionality.
- **Configured payment, locale, and country settings** in Business Manager according to client requirements to ensure accurate regional behavior.
- **Collaborated closely with Business Analysts** to translate business needs into technical solutions and configurations.
- **Created unit test cases and maintained documentation** to ensure code quality, compliance, and maintainability.

Curry's Omnichannel:

- **Created a new cartridge path** for a newly launched site, establishing a scalable foundation for development.
- **Configured landing pages, account login, address forms, and AuthProvider settings** in Business Manager for the new site, ensuring seamless user experience.
- **Implemented PDP and miniCart functionalities** and resolved various bugs to enhance site stability and performance.
- **Supported team members with initial project setup**, streamlining onboarding and development workflows.
- **Prepared and maintained LLDs and Confluence documentation** for all implemented features and configurations, improving knowledge sharing and project transparency.

Cognizant Technology Solutions – Java Backend Developer

May 2018 to Feb 2020

Yards and Assets:

- **Created detailed code structure and flow documentation** to support consistent development and maintenance practices.

- **Prepared system architecture documents** outlining design patterns, integration points, and component interactions.
- **Developed and optimized DB2 SQL queries** for data retrieval, validation, and performance enhancement.
- **Implemented application logic** in Visual Studio using **Java, JScript, and related frameworks**, ensuring robust and scalable functionality.
- **Tested APIs** using dedicated tools to validate data integrity and system performance.
- **Performed application migration to client servers**, ensuring smooth deployment and minimal downtime.
- **Prepared daily and monthly project reports** to track progress, deliverables, and overall performance metrics.

OPEX:

- **Created detailed code structure and flow documentation** to establish clear development guidelines and improve maintainability.
- **Prepared comprehensive architecture documents** defining system design, integration flow, and technical specifications.
- **Developed and optimized DB2 SQL queries** for efficient data access and manipulation.
- **Implemented core application logic** in Visual Studio using **Java, JScript, and related frameworks**, ensuring reliable and scalable performance.
- **Prepared daily and monthly project reports** to track milestones, progress, and deliverables.
