WORK EXPERIENCE

Hobo Bags

Dec. 2023 – Present

Senior Integration/Python Engineer

Baltimore, MD

- Provided technical expertise and support to resolve complex integration challenges and ensure seamless data flow between Azure, Intune, Microsoft Entra and Python.
- Documented integration processes and configurations, and provided training to end users on using integrated software applications on Azure, GCP and Python.
- Designed and deployed AI-powered assistants using large language models (LLMs) to automate knowledge retrieval, decision support, and workflow execution across business domains.
- Integrated conversational AI into enterprise systems using APIs and secure authentication patterns.

New York Life Insurance

Jun. 2022 – Nov. 2023

Senior Python Engineer

Baltimore, MD

- Implemented and produced custom software and AI solutions for 20+ clients using Python, GCP, and JavaScript.
- Developed and maintained GitHub code bases and SQL databases, optimizing performance and scalability.
 - Reduced average query response time by 50% and increased system uptime to 99.9% through proactive monitoring and optimization strategies.
- Collaborated with governance and security teams to enforce access controls, data privacy, and responsible AI usage
- Implemented RESTful APIs and microservices using FastAPI/Flask with authentication, validation, and error handling

PDE Health

Jun. 2021 – May 2022

Python Engineer

Baltimore, MD

- Developed healthcare applications in Python for clinical and insurance use, improving medical billing efficiency and claims automation.
- Developed and implemented HL7 and FHIR-based solutions to enable seamless healthcare data exchange between EHRs, insurance providers, and third-party systems.
- Designed and optimized FHIR APIs for real-time data retrieval and interoperability across multiple healthcare platforms.
- Developed scalable backend services and data pipelines in Python using modular, testable, and production-ready architectures
- Developed and maintained EDI X12 transactions (e.g., 837, 835, 270/271, 276/277, 278) for claims, payments, eligibility, and authorizations.

Harrisburg University of Science and Technology

Sep. 2017 – May 2021

Software Engineer

Harrisburg, PA

- Conducted an AI research project which trained and tested an Artificial Neural Network and the accuracy of detecting spam in Online websites.
- At the end of the project, the Artificial Neural Network was able to detect spam with 90% accuracy.
- Implemented Python, PyTorch, TensorFlow, and Django for a comprehensive testing framework; reduced software bugs by 40% and improved overall product quality.

EDUCATION

Harrisburg University of Science and Technology

Harrisburg, PA

B.S, Computer and Information Sciences

- *Cum Laude, 3.7 GPA*

LANGUAGES & TECHNOLOGIES

- **Languages:** Python, Java, JavaScript, SQL, MongoDB, MySQL, HTML, CSS, PHP, .NET, C++, C#, Go, R, R Shiny, OnBase
- **Technologies:** Salesforce, Microsoft SQL Server, NetSuite, Oracle, Postman, Jira, Confluence, AWS, Azure, GCP
