

Jossell Araiza

Software Engineer / IT Engineer

jossellaraiza@gmail.com · +1-480-205-2200 · <https://linkedin.com/in/jossell-araiza/> · <https://github.com/Jossell-Araiza> · Phoenix, Arizona

Level 2 IT engineer and self-taught full-stack software engineer with hands-on experience across enterprise IT support, vulnerability/patch management, AI-assisted application development, agentic AI systems, and blockchain/Web3. Bilingual (English/Spanish). Track record of >95% organization-wide metric success at MFS Investment Management; a flagship local-first agentic OS that orchestrates multiple LLMs across modular skills, plus six additional production-grade full-stack projects shipped via AI-assisted workflows. Strong in Python, Java, TypeScript, C#, SQL, plus modern data, DevOps, and LLM-orchestration tooling.

EXPERIENCE

Level 2 IT Technical Engineer — MFS Investment Management

2025-09 – Present

Phoenix, AZ

- Owned Tier-3 escalations for complex hardware and network issues across desktops, laptops, servers, physical firewalls, routers, internet circuits, fiber cabling, monitors, printers, mobile devices, docks, headsets, webcams, and Ethernet — supporting end-to-end patch management and vulnerability remediation in financial operations.
- Conducted in-depth software troubleshooting and root cause analysis using Event Viewer, SCCM/MECM, Command Prompt, PuTTY, and Windows utilities; replicated issues on personal equipment and collaborated with teams to implement preventive fixes.
- Provided remote and on-site end-user support for VPN (Global Protect), Wi-Fi/Ethernet, server-side issues, certificate assignments, guest Wi-Fi, VDI configurations, and coordination with building management, ISPs, and networking teams.
- Installed, configured, and updated Windows 10/11, iOS/Android, software, and security patches via SCCM/MECM, Software Center, Group Policy, Intune, and PatchMyPC; managed accounts, permissions, and access in Active Directory, Citrix, and Trellix.
- Handled 50–100 escalated tickets monthly across BMC Helix and ServiceNow; documented resolutions for SLA compliance; contributed to OneNote knowledge base; tracked KRI and SLA metrics for patch and vulnerability management.
- Implemented and monitored CrowdStrike, Wolf Security, Global Protect, HP Sure Click, Trellix encryption, MFA, PIN/card scanners, Windows Firewall, routing protocols, and Nessus Agents; maintained >95% success rate across all organization-wide metrics.
- Led network infrastructure upgrades (server-rack work, fiber cabling with ISP coordination), office-wide hardware rollouts, system migrations, and software implementations.
- Managed office IT inventory, shipping, disposal/recycling, and laptop wiping; provided on-call after-hours support for critical tasks including building power shutdowns and server-room configurations.
- Leveraged PowerShell scripting for patch automation, system diagnostics, patch reporting, and bulk remediation; built and maintained dashboards tracking patch compliance, vulnerability metrics, KRIs, and SLA performance (Data Analytics Honors).

Independent Full-Stack Software Engineer — Self-Taught Personal Projects

2025-01 – Present

Phoenix, AZ

- Built and optimized six production-grade full-stack applications using AI-assisted workflows, advanced prompt engineering, AI-powered refactoring, automated testing, and proactive troubleshooting — 2–3× faster iteration while maintaining human oversight for reliability.
- Continuously expanding GitHub portfolio focused on emerging technologies including advanced AI/ML applications and generative AI solutions.

Entrepreneur — Independent E-commerce & In-Person Reseller — Self-Employed

2024-01 – 2025-01

Phoenix, AZ

- Founded and operated a full-cycle reselling business sourcing, pricing, and selling consumer products (coffee, candies, pool supplies, school/kitchen supplies) across e-commerce and in-person channels.
- Managed product sourcing, supplier negotiations, inventory tracking, pricing strategy, marketing, customer service, order fulfillment, and shipping end-to-end.

- Performed daily profit/loss analysis, financial forecasting, and inventory management to maximize margins and minimize losses.
- Resolved customer inquiries, returns, and disputes while maintaining high satisfaction across online and in-person channels.
- Built hands-on experience in small-business operations, supply-chain logistics, and rapid market adaptation.

Translator / Technical Writer / Localization Specialist & Sole IT Administrator — Arizona Translators 2022-05 – 2025-09

Arizona (Remote)

- Provided accurate and culturally sensitive translation, technical writing, and localization for the State of Arizona, ensuring effective communication across English and non-English-speaking stakeholders.
- Translated, edited, and localized technical manuals, legal contracts, educational guides, and administrative materials with strict adherence to terminology, tone, and cultural relevance.
- Collaborated with school districts to localize educational content, adapting idiomatic expressions, cultural references, and regional dialects.
- Developed user guides, process workflows, and training materials for state-affiliated departments.
- Edited and proofread translated materials using Trados and Grammarly; streamlined multilingual workflows, reducing revision cycles by 20%.
- Conducted localization testing for digital platforms, aligning UI/UX, date/time formats, and measurement units with regional preferences.
- Authored PowerShell automation as sole IT engineer for the company's onboarding pipeline — read new-hire data from CSV and automatically created Active Directory user accounts, assigned department-based security-group and distribution-list memberships, set home-folder permissions, and installed the standard software stack; additional scripts handled automated provisioning, system imaging, and remediation of recurring issues as the company scaled from a small team to multiple offices.
- Owned Tier-3 escalations as the company's only IT contact — performed root-cause analysis on recurring network, VPN, and endpoint issues and turned each repeating failure into a scripted PowerShell remediation so the same tickets stopped recurring; established the IT operating baseline that supported headcount and office expansion across a 3-year tenure.
- Administered Microsoft 365 admin center, Active Directory, and the company's ServiceNow / BMC Helix ticketing platform end-to-end — including user-account lifecycle, license assignments, security groups, distribution lists, and access permissions in M365/AD; built the ticketing system from the ground up in ServiceNow/Helix (initial structure, categories, workflows, knowledge base) to standardize IT support as the company grew.
- Managed endpoints, network connectivity, and IT projects across Windows and macOS — installed and maintained desktops, laptops, printers, VoIP phones, mobile devices, and AV equipment; resolved VPN, wired, and Wi-Fi connectivity issues; led IT infrastructure upgrade and deployment projects across multiple offices.

Business Operations Associate — Aston Carter

2022-07 – 2022-09

Arizona

- Managed contractor payroll, accounts receivable, and collections for multiple clients.
- Delivered high-level customer service to external customers, corporate staff, and field office employees.
- Built and maintained customer relationships through conflict resolution, professionalism, and consistent follow-up.
- Multi-tasked independently across workflows; quickly adapted to workplace changes.
- Used Excel (macros, pivot tables, VLOOKUP, financial forecasting, graphs), PowerPoint, and Word daily.
- Performed QA, data analysis, and reporting using PeopleSoft and proprietary applications.

Inbound / Outbound / ICQA Problem Solver & Training Ambassador / Warehouse Specialist — Amazon Warehouse 2017-11 – 2022-05

Arizona

- Provided IT support in high-volume warehouse settings, ensuring uptime of critical operational systems.
- Maintained rugged devices including barcode scanners, RF units, and label printers.
- Troubleshoot issues affecting inventory tracking, scanning workflows, and warehouse management systems.
- Performed hardware setups and preventative maintenance in industrial environments.
- Assisted in deploying IT infrastructure for new warehouse zones and supported 24/7 operations.
- Handled associate issues across Inbound, Outbound, and ICQA departments to ensure service and efficiency.

- Served as assistant to Area Managers; trained groups of 5–15 new associates in three department functions.
- Consistently recognized as a top performer in each department.
- Used Excel daily (XLOOKUP, VLOOKUP, COUNTIFS, pivot tables, data cleaning) for cross-department data work.

Outbound Specialist — Marshalls

2017-09 – 2017-10

Arizona

- Processed outbound shipments and managed inventory in a fast-paced retail environment.
- Ensured accurate order fulfillment and quality control for outgoing merchandise.
- Provided customer service at the point of sale and during returns.

Assistant Manager / Delivery Driver / Customer Service — Hungry Howie's

2017-05 – 2017-09

Arizona

- Managed daily store operations including staff scheduling, inventory, and customer service.
- Handled delivery routes, order accuracy, and direct customer interactions.
- Resolved customer complaints in a fast-paced food service environment.

Delivery Driver / Customer Service — Pizza Hut

2016-09 – 2017-03

Arizona

- Delivered orders accurately and on time while maintaining excellent customer service.
- Handled cash and card transactions, order taking, and customer inquiries.
- Assisted with store operations and maintained cleanliness standards.

Electrician — Austin Electric

2015-05 – 2015-09

Arizona

- Performed electrical installations, repairs, and maintenance on residential and commercial projects.
- Troubleshoot wiring and circuitry issues using standard electrical tools and safety protocols.
- Collaborated with construction teams to ensure code compliance and project completion.

Landscapist / Customer Service — Landscaping Company

2015-05 – 2015-09

Arizona

- Executed landscaping projects including planting, irrigation installation, and lawn maintenance.
- Provided client consultations and customer service for residential and commercial properties.
- Operated heavy equipment and maintained tools and vehicles.

Accountant / Customer Service — Romeo's Discothèque

2012-08 – 2012-10

Texas

- Managed daily accounting tasks including cash reconciliation and financial records.
- Provided front-desk customer service and handled reservations and inquiries.
- Assisted with inventory tracking and basic administrative duties in a hospitality setting.

Plumber / Customer Service — No Worries Rooter

2010-05 – 2014-11

Arizona

- Performed plumbing installations, repairs, and emergency service calls for residential and commercial clients.
- Diagnosed and resolved drain, pipe, and fixture issues using professional tools and techniques.
- Delivered customer service and explained repair processes clearly to homeowners and businesses.

Production Line / Warehouse Specialist — Product Manufacturer

2010-05 – 2015-05

Arizona

- Operated production line machinery and assembled products to quality standards.
- Managed warehouse inventory, shipping, and receiving operations.
- Performed quality control checks and maintained safe work environments.

Recovery Agent / Administrative / Customer Service / IT Infrastructure & System Administrator —
Servicios AutoMex

2010-05 – 2015-05

- Handled debt recovery processes, client communications, and payment negotiations.
- Performed administrative tasks including data entry, filing, and customer support.
- Managed IT infrastructure, system administration, and basic network troubleshooting for the office.

PROJECTS

AI-OS — Local-First Agentic Operating System

A local-first, autonomous agentic operating system (~20,000 lines of async Python, built solo via AI-assisted development) that orchestrates multiple LLMs across a pluggable skill registry to run an end-to-end job-application pipeline — ingest, relevance-score, analyze, tailor, render, and submit — with human-in-the-loop approval gates. Runs as a FastAPI daemon over PostgreSQL with a config-driven model router (DeepSeek V4 primary; local Ollama for embeddings and bulk classification), a deterministic Playwright submitter plus a vision-based fallback filler, and a Discord control surface. Includes a self-healing loop that diagnoses, writes, test-gates, and merges its own source-code fixes in production behind guardrails it cannot self-edit.

- Completed the first end-to-end autonomous job applications across Greenhouse, Lever, Ashby, Workday, and Dice (each confirmed by ATS email + database state).
- Built a self-modifying loop that writes, test-gates in an isolated git worktree, and merges its own code fixes (180+ merged) behind guardrails it cannot self-edit.
- Migrated the live production database SQLite to PostgreSQL with a FK-safe ~1-minute cutover and a dialect-aware SQLAlchemy layer.
- Re-platformed the model layer onto DeepSeek V4 via a provider-abstracted LiteLLM router (~27x cheaper per application; no hardcoded model references).
- Cleared modern ATS anti-bot defenses: 2Captcha solving, EEO/custom-question automation, résumé-grounded free-text answers, and IMAP security-code entry.
- Designed a four-agent self-optimizing layer on an append-only blackboard that clusters failures, diagnoses root causes, and files test-gated code fixes.

Stack: FastAPI, Async Python, SQLAlchemy 2.x, PostgreSQL, LiteLLM, DeepSeek V4, Multi-agent systems, LLM orchestration, Playwright, Prompt engineering, Function calling, Structured outputs, 2Captcha, APScheduler, Typst, Docker, Local model serving (Ollama), Self-modifying code

RealWorld 'Conduit' App — Full-Stack Assessment (Angular + NestJS)

Full-stack RealWorld ('Conduit') implementation built as an engineering assessment — an Angular 16 + NgRx frontend and a NestJS 10 (TypeScript) backend in an Nx monorepo, with Dev Containers and docker-compose for the development environment. **Stack:** Angular, NgRx, TypeScript, NestJS, Nx monorepo, RxJS, Docker

Java Task Management App · <https://github.com/Jossell-Araiza/Java-TaskManagement-App>

Spring Boot 3.3 (Java 17) REST backend for a task manager: register/login with BCrypt password hashing, full CRUD task endpoints via Spring Data JPA, and a User ↔ Task @ManyToOne model persisted to PostgreSQL. Spring Security with HTTP Basic auth and a @ControllerAdvice global exception handler. (React frontend lives in a separate repo.) **Stack:** Spring Boot, Spring Security, Spring Data JPA, BCrypt, PostgreSQL, Maven, React

C# Task Manager Web App · <https://github.com/Jossell-Araiza/C-TaskManager-WebApp>

ASP.NET Core 8 / C# Web API for a task manager: full CRUD over a TaskItem entity persisted to SQLite via Entity Framework Core (code-first migration). Task creation accepts a multipart file attachment behind a pluggable IStorageService interface with local-filesystem and AWS S3 implementations (S3-ready). Swagger/OpenAPI docs and CORS. **Stack:** .NET Core 8, Entity Framework Core, SQLite, AWS S3 (storage abstraction), Swagger/OpenAPI, CRUD APIs, React

SQL Expense Tracking Dashboard · <https://github.com/Jossell-Araiza/SQL-Expense-Tracker>

Full-stack Flask + PostgreSQL expense tracker, deployed live on Render via Gunicorn. Bcrypt-hashed authentication with Flask-Login sessions; each of the 6 REST endpoints enforces per-user authorization (403 on mismatch). Parameterized SQL throughout (psycopg2) to prevent injection, including a monthly-spending-by-category aggregation using JOIN / GROUP BY / EXTRACT over a normalized 3-table schema (users / categories / expenses) with foreign keys, ON DELETE CASCADE / RESTRICT, and a CHECK(amount > 0) constraint. Bootstrap + Chart.js dashboard. **Stack:** PostgreSQL, Flask, Flask-Login, Bcrypt, Python, psycopg2, Bootstrap, Chart.js, Gunicorn, Render, Parameterized SQL

Python Book Recommendation API · <https://github.com/Jossell-Araiza/Python-BookRecommendation-API>

FastAPI book-recommendation REST API using user-based collaborative filtering — scikit-learn cosine similarity over a SciPy CSR sparse user-item matrix on the Goodbooks-10k dataset. An offline precompute step serializes the sparse matrix, index maps, and similarity matrix to disk so the API loads them at startup instead of recomputing per request; SQLite persists ratings and books. Two endpoints (POST /add_rating, GET /recommend/{user_id}?top_n=N) with Pydantic validation, cold-start fallback

to top-rated books, on-the-fly similarity for unseen users, and popular-book padding for sparse matches. Includes a minimal vanilla-JS frontend.**Stack:** FastAPI, SQLite, scikit-learn, SciPy sparse matrices, Collaborative filtering, Recommender systems, Pydantic, Uvicorn

Autsai — Real-Time Messaging Backend · <https://github.com/Jossell-Araiza/Autsai-Backend-Project>

Firebase-backed messaging REST API in Node.js / Express 5. ~11 endpoints covering email/password auth (register/login/profile/delete via the Firebase Admin SDK), one-on-one and group chat persisted to Firestore subcollections (1-1 keyed by a sorted UID pair; groups with a members array + messages subcollection), group member management via arrayUnion/arrayRemove, and reply-to-message threading. Lightweight HTML/CSS/JS frontend. Built as a backend take-home assessment.**Stack:** Node.js, Express 5, Firebase, Firebase Admin SDK, Cloud Firestore, REST API, Authentication

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, C#, SQL, C++, Rust, HTML, CSS, PowerShell, Solidity

Frameworks & Libraries: Spring Boot, .NET Core, React, Angular, Flask, FastAPI, Django, JPA, SQLAlchemy, scikit-learn

AI-Powered Development & Prompt Engineering: Prompt engineering, AI coding assistants, Grok, GitHub Copilot, Claude, AI-assisted debugging, Code testing, Human-in-the-loop review

Agentic Systems & LLM Orchestration: Multi-agent systems, LangGraph, LiteLLM, Provider abstraction (Anthropic, Moonshot, Google, local Ollama), Function calling / tool use, Structured LLM outputs (JSON schemas), Skill registry pattern, Model Registry (capability scoring, cost/latency tracking), Prompt templating, Reflection / critic agents, Meta-optimization, Agent telemetry (Langfuse), Async orchestration (asyncio, FastAPI lifespans), MCP-style tool integration

AI Application Engineering: LLM-driven scoring and classification, Retrieval / RAG patterns, Embeddings (nomic-embed), Local model serving (Ollama), Vector stores (Qdrant, Chroma), Cost/latency budgeting, Rate-limit-aware concurrency, Browser automation agents (Playwright, Skyvern, Computer Use), Self-hosted observability

Web & API Development: RESTful APIs, WebSocket, OOP, TDD, GraphQL

Database & Data Management: PostgreSQL, MongoDB, SQLite, SQL optimization, Data warehousing, Query design

Data Science & Analytics: Pandas, NumPy, SciPy, scikit-learn, Tableau, Excel (pivot tables, macros, advanced formulas), Regression analysis, A/B testing

Cloud & DevOps: AWS (S3, Elastic Beanstalk), Docker, Kubernetes, Jenkins, Git, GitHub, Postman, Jira, VS Code

IT Infrastructure & Support: SCCM, MECM, Active Directory, Citrix, Group Policy, Intune, PatchMyPC, VMware, ServiceNow, Helix, PowerShell scripting, TCP/IP, DNS, Firewalls, Windows Server, VPN (Global Protect), Wi-Fi, Ethernet, Fiber cabling

Security: CrowdStrike, Wolf Security, HP Sure Click, Trellix encryption, MFA, Nessus Agents, Vulnerability remediation, Patch management, KRI/SLA tracking

Blockchain & Web3: Solidity, Rust (Solana), Hardhat, Smart contracts, Smart contract audits, Uniswap, Aave, Curve, DeFi

Business & Finance: QuickBooks, Budgeting, Financial forecasting, Agile, Workflow automation scripting

Creative & Multimedia: Adobe Premiere Pro, Photoshop, Canva, UI/UX design, Storyboarding

E-commerce & Supply Chain: Product sourcing, Supplier negotiation, Inventory management, Profit/loss analysis, Order fulfillment, Shipping, Customer dispute resolution

Microsoft Office Suite: Excel (macros, pivot tables, VLOOKUP/XLOOKUP), PowerPoint, Word, OneNote

Translation & Technical Writing: Trados, Grammarly, Localization, Legal translation, Educational content localization
