

Karadi Deveswar Venkata Satya Varma

Senior Business Analyst

(864) 319-6441 | Deveswarvarma@gmail.com | www.linkedin.com/in/deveswark

Professional Summary

- Senior Business Analyst with 9+ years of experience across financial, healthcare, and insurance domains, partnering with business and IT stakeholders to translate complex business needs into actionable requirements, scalable solutions, and measurable outcomes.
- Skilled in eliciting requirements through stakeholder interviews, JAD sessions, and workshops, and converting them into clear BRDs, FRDs, functional specifications, user stories, and process flow diagrams.
- Hands-on experience working in Agile and Scrum delivery models, including backlog grooming, sprint planning, story refinement, retrospectives, and UAT coordination using JIRA, Confluence, and Azure DevOps.
- Proven ability to facilitate UAT cycles end-to-end by writing test scenarios, coordinating with QA and business users, tracking defects, and obtaining business sign-off prior to production releases.
- Strong experience working closely with risk, compliance, and audit teams on GDPR, HIPAA, SOX, and AML-related initiatives to ensure data accuracy, traceability, and regulatory readiness.
- Expertise in source-to-target mapping (STTM), data lineage documentation, gap analysis, and as-is/to-be process modeling to drive system migrations and modernization programs.
- Hands-on SQL skills across SQL Server, Oracle, DB2, and Azure SQL for data validation, reconciliation, ad-hoc analysis, and writing queries that support reporting and audit needs.
- Designed executive dashboards and operational reports in Power BI and Tableau to present KPIs, trends, and exceptions to leadership in a clear and decision-ready format.
- Solid understanding of cloud data platforms including Azure Data Factory, Azure Data Lake, Azure Synapse, and AWS S3, supporting requirement definition and validation for cloud-based reporting and analytics solutions.
- Worked with Microsoft Fabric, Power BI Service, and modern BI architecture to support end-to-end reporting, semantic modeling, and self-service analytics adoption.
- Hands-on experience supporting AI and machine learning initiatives by gathering business requirements, defining use cases, validating training data, and partnering with data science teams on feature engineering and model evaluation.
- Familiar with Generative AI and Large Language Model (LLM) concepts including prompt engineering, retrieval-augmented generation (RAG), Azure OpenAI Service, and integrating AI capabilities into business workflows.
- Experience supporting AI-driven analytics and automation use cases such as fraud detection, anomaly detection, customer segmentation, document intelligence, and intelligent letter generation.
- Comfortable working with Azure Machine Learning, Azure Cognitive Services, Databricks AutoML, and MLflow to support requirement definition, UAT, and operational rollout of ML-powered solutions.
- Skilled at translating data science and AI model outputs into business-friendly insights, dashboards, and decision-support tools for executive and operational stakeholders.
- Strong exposure to AML and financial crime workflows, including SAR generation, transaction monitoring, alert investigation, and case management process improvements.
- Skilled at facilitating cross-functional meetings between business, technology, DevOps, data science, and vendor teams to align on scope, timelines, dependencies, and release strategies.
- Comfortable supporting CI/CD release coordination, environment promotions (DEV/TEST/PROD), and post-deployment hyper-care for analytics, BI, AI, and application releases.
- Strong communication and documentation skills with the ability to translate technical and AI/ML concepts for business audiences and clarify business priorities for development teams.

Technical skills

Business Analysis

Requirement Gathering, BRD, FRD, FSD, User Stories, Use Cases, Gap Analysis, Process Flow Diagrams, JAD Sessions, Stakeholder Management, UAT Coordination

Methodologies	Agile, Scrum, Kanban, Waterfall, SDLC, Hybrid Delivery
PM & Collaboration	JIRA, Confluence, SharePoint, Azure DevOps, Microsoft Teams, Visio, Lucidchart, MS Project
Reporting & BI	Power BI, Tableau, Microsoft Fabric, SSRS, Excel (Pivot, VLOOKUP, Power Query), DAX, KPI Dashboards
Databases & Querying	MS SQL Server, Oracle, IBM DB2, Azure SQL, MySQL, Stored Procedures, Joins, Indexing
Cloud Platforms	Azure (Data Factory, Data Lake, Synapse, Purview, OpenAI, ML), AWS (S3, Glue, Lambda)
AI / ML Awareness	Azure OpenAI, Azure Cognitive Services, Azure Machine Learning, Databricks AutoML, MLflow, Prompt Engineering, RAG, GenAI Use Cases, Document Intelligence
Domain Knowledge	Banking, AML/Fraud, Regulatory Reporting, Healthcare Claims & Utilization, HIPAA, GDPR, SOX, Insurance
DevOps Awareness	CI/CD Pipelines, Git, Azure DevOps Boards, Release Management, Environment Promotion (DEV/TEST/PROD)
Other Tools	OpenText, Alteryx, Collibra, ServiceNow, Postman, MS Office Suite

PROFESSIONAL EXPERIENCE:

Role: Senior Business Analyst

Client: Fifth Third Bank, Cincinnati, OH

Jan 2024 to Present

Key Achievements & Responsibilities:

- Worked as the lead Business Analyst on a regulatory and risk reporting program at Fifth Third Bank, partnering with Finance, Treasury, Risk, and Compliance teams to gather requirements for liquidity, credit risk, and asset performance reporting on the Azure data platform.
- Conducted requirement-gathering workshops and one-on-one stakeholder interviews to capture business rules around KPI definitions, regulatory thresholds, and reporting frequencies, and documented them in detailed BRDs and FRDs reviewed and signed off by business owners.
- Authored end-to-end source-to-target mapping (STTM) documents covering source systems, transformation logic, business rules, and target Power BI datasets, and walked through the mappings with engineering teams during design reviews.
- Led UAT planning and execution by writing test cases tied to acceptance criteria, coordinating UAT participants across business units, tracking defects in JIRA, and obtaining formal sign-off from business stakeholders before production releases.
- Performed hands-on data validation using SQL on SQL Server and Azure SQL to reconcile source-to-report numbers, validate KPI calculations, and investigate variances raised during SIT and UAT cycles.
- Gathered business requirements for AI-driven fraud detection and anomaly detection use cases, partnering with data science teams to define alert thresholds, validate model outputs, and translate ML insights into business-ready dashboards for the BSA/AML investigation team.
- Supported Generative AI initiatives for regulatory letter generation by gathering requirements for Azure OpenAI integration with OpenText workflows, defining prompt patterns with Compliance reviewers, and validating AI-generated outputs against regulatory templates.
- Worked with Azure Machine Learning and Databricks AutoML teams on customer segmentation and credit risk scoring use cases, helping define features, validate training data, and document model behavior for audit and model risk management reviews.
- Coordinated DEV → TEST → PROD deployment cycles for Power BI workspaces and reports by working with Azure DevOps and the release management team, ensuring proper approvals, change tickets, and rollback plans.
- Supported data governance initiatives by working with the Collibra and Azure Purview teams to capture data lineage, define business glossary terms, and ensure RBAC and access controls were aligned with audit, AI model risk, and regulatory requirements.

Environment: Azure Data Factory, Azure Data Lake, Azure Synapse, Azure Purview, Azure DevOps, Azure OpenAI Service, Azure Machine Learning, Azure Cognitive Services, MS SQL Server, Power BI, Microsoft Fabric, OpenText, Alteryx, Collibra, JIRA, Confluence, MS Excel, RBAC, TDE

Client: BCBS, Chicago, IL

Nov 2022 to July 2023

Role: Senior Business Analyst

Key Achievements & Responsibilities:

- Worked as a Senior Business Analyst on healthcare reporting and analytics initiatives at Blue Cross Blue Shield, partnering with Claims, Actuarial, Provider Operations, and Compliance teams to define reporting requirements aligned with HIPAA and enterprise data policies.
- Conducted detailed requirement-gathering sessions with business stakeholders to define KPIs around medical loss ratio, utilization trends, cost drivers, and provider performance, and translated them into BRDs, FRDs, and acceptance criteria.
- Documented end-to-end data flow and STTM artifacts covering claims, membership, eligibility, and utilization data sources, and reviewed transformation logic with the data engineering team to ensure business rules were correctly implemented.
- Drove UAT cycles by writing detailed test cases mapped to business requirements, coordinating end-user testing across operations and actuarial teams, logging and triaging defects in JIRA, and securing formal business sign-off before production release.
- Performed in-depth data validation using SQL queries against the Azure Data Lake and SQL Server to reconcile dashboard numbers with source-of-truth claims and membership data, and identified data quality issues for remediation.
- Designed and validated executive Power BI dashboards covering claims utilization, cost-per-member, top procedures, and provider scorecards, and conducted demo sessions with business leadership to gather feedback and refine visuals.
- Acted as the bridge between business teams and the data engineering team during ETL/ELT pipeline development, clarifying business rules, reviewing pipeline logic in Azure Data Factory, and tracking defects through resolution.
- Worked closely with the data governance team to maintain data lineage in Collibra and Azure Purview, document metadata, and ensure RBAC and Active Directory access controls were in line with HIPAA and internal compliance standards.
- Coordinated CI/CD release activities with Azure DevOps engineers to manage Power BI and pipeline promotions across DEV, TEST, and PROD environments, including change approvals, release notes, and post-deployment validation.
- Contributed to operational improvements by analyzing manual reporting pain points, recommending automation opportunities, and supporting initiatives that improved dashboard refresh stability and reduced turnaround time for compliance reports.

Environment: Azure Synapse Analytics, Azure Data Factory, Azure Data Lake, Azure Purview, Azure DevOps, Azure Active Directory, Power BI, SQL Server, Collibra, RBAC, MS Excel, JIRA, Confluence, Git, HIPAA, GDPR

Client: LUMERIS, Charlotte, NC

Dec 2019 to July 2022

Role: Business Analyst (Healthcare Analytics)

Key Achievements & Responsibilities:

- Served as a Business Analyst on healthcare analytics initiatives at Lumeris, partnering with care management, clinical operations, and product teams to translate population health and value-based care requirements into clear specifications.
- Gathered and documented requirements for membership, claims, and utilization reporting through stakeholder interviews and working sessions, and authored BRDs, FRDs, and user stories aligned with Agile delivery cycles.
- Analyzed large healthcare datasets across members, providers, claims, and utilization records using SQL on AWS S3-backed data sources to identify cost drivers, utilization patterns, and care gap opportunities for the care management team.
- Coordinated UAT cycles for new dashboards and reports by writing test scenarios, walking business users through the validation process, capturing defects, and confirming readiness for production release.
- Validated end-to-end data movement across analytics and care management platforms by running reconciliation queries, comparing source vs. target counts, and ensuring transformation accuracy across AWS Glue jobs.
- Supported HIPAA-aligned data security initiatives by partnering with security teams to review audit logging, access reviews, and data masking requirements for sensitive PHI datasets.
- Documented data lineage and metadata in Collibra to improve governance visibility, support audit readiness, and provide clarity on how source data flowed into downstream care management dashboards.
- Partnered with Tableau developers to build analytical dashboards combining clinical, financial, and operational data, and ran review sessions with leadership to gather feedback and finalize KPIs.
- Helped plan and coordinate controlled healthcare data migration activities by aligning with technical teams on cutover plans, validation checkpoints, and continuity-of-operations safeguards.

- Maintained product backlogs and JIRA boards on behalf of the analytics squad, ran daily stand-ups when needed, and partnered with the product owner to prioritize stories based on business value.

Environment: AWS S3, AWS Glue, AWS Lambda, SQL, Tableau, Collibra, MS Excel, PowerPoint, Confluence, JIRA, Agile / Scrum, HIPAA

Client: CSS Corp Pvt Ltd, India

Jun 2018 – Sept 2019

Role: Data Analyst / Data Modeler

Key Achievements & Responsibilities:

- Participated in Joint Application Design (JAD) sessions with business and technology stakeholders to gather requirements, define project scope, and translate business needs into data and reporting solutions.
- Contributed to Enterprise Data Warehouse (EDW) and Master Data Management (MDM) initiatives by working with data architects on star and snowflake schemas to support enterprise reporting needs.
- Built conceptual, logical, and physical data models using ERWIN and ER Studio to support data integration, reporting, and cross-functional analytics initiatives.
- Developed and optimized SQL queries and partnered with ETL teams using SSIS and Informatica to support data migration and transformation across Oracle, Netezza, DB2, and SQL Server environments.
- Performed data profiling, validation, and cleansing activities to ensure data accuracy, quality, and consistency across OLTP and OLAP systems.
- Created analytical and operational reports using SAS and SSRS to support finance, operations, and business teams with actionable insights for monthly and ad-hoc reviews.
- Documented data mappings, transformation logic, data lineage, and metadata to support audit readiness, governance compliance, and enterprise data quality standards.

Environment: SQL Server, Oracle, Netezza, DB2, Informatica, SSIS, SSRS, SAS, ERWIN, ER Studio, Teradata, Windows, Agile Methodology.

Client: InfraSoftTech, India

Jan 2016 to May 2018

Role: Python Developer

Key Achievements & Responsibilities:

- Designed, developed, and maintained enterprise-grade web applications using Python (Flask, Django) supporting business workflows and back-office operations.
- Built and integrated RESTful APIs and worked with relational and NoSQL databases (MySQL, Cassandra) to support transactional workloads and reporting needs.
- Automated data ingestion, transformation, and validation processes using Python scripts to support reporting, analytics, and operational dashboards.
- Worked with distributed data processing frameworks such as Hadoop and Apache Spark to support large-scale data transformations and analytics use cases.
- Deployed applications on AWS and contributed to infrastructure and configuration automation using Ansible and Chef to enable reliable, repeatable deployments.
- Collaborated with product owners, QA teams, and business stakeholders in Agile sprints, performed peer code reviews, and maintained technical documentation.

Environment: Python, Flask, Django, Java, Spring, Hibernate, MySQL, Cassandra, Hadoop, Apache Spark, Ansible, Chef, AngularJS, AWS, Informatica, Windows, Agile

Education: Computer science engineering from Andhra University, Visakhapatnam, Andhra Pradesh, India - 2016

CERTIFICATIONS: Microsoft Certified: Fabric Analytics Engineer Associate (DP-600) | Microsoft
