

KAVYA GANDU

Buffalo, NY — +1 (716) 520-2854 — kavyag.py@gmail.com — LinkedIn — GitHub

EDUCATION

University at Buffalo, SUNY, Buffalo, NY

M.S. in Data Sciences and Applications

Aug 2023 – Jan 2025

GPA: 3.73/4.00

Jawaharlal Nehru Technological University, Hyderabad, India

B.Tech in Electronics and Communication Engineering

Jul 2017 – Jul 2021

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions

Programmer Analyst – Cloud & Data Engineering (SAP Basis)

Hyderabad, India

Dec 2021 – Jun 2023

- Supported migration and provisioning of SAP environments onto Azure cloud, including configuring Virtual Machines for compute workloads and managing Blob Storage for data storage.
- Developed automation scripts using PowerShell and Bash to manage routine administrative tasks, including Azure resource monitoring, user provisioning, and system health checks.
- Managed and monitored enterprise batch jobs and data workflows running on Azure infrastructure, optimizing performance and resolving pipeline issues proactively.
- Maintained secure and consistent deployments across SAP landscapes using automated change management practices and version-controlled configuration scripts.
- Collaborated with DevOps teams to apply infrastructure patches, perform upgrades, and optimize database performance of SAP HANA and MaxDB environments deployed on Azure.
- Utilized Azure Monitor and Log Analytics for monitoring system performance, generating logs, and supporting internal compliance audits with detailed usage and access reporting.
- Conducted sandbox projects to explore advanced Azure services, enhancing skills in resource provisioning, security best practices, and infrastructure automation.

University at Buffalo

Research Assistant – NLP and Data Engineering

Buffalo, NY

Feb 2025 – Present

- Designed data preprocessing and transformation workflows for social media datasets using Python and Pandas; executed and versioned experiments on Azure Databricks and Azure ML environments.
- Built NLP pipelines for misinformation detection using Hugging Face Transformers, incorporating tokenization, text vectorization, and GPU-accelerated model training on Azure ML.
- Managed large unstructured datasets using Azure Blob Storage for centralized storage and collaborative access, and validated model outputs with automated reporting scripts using Azure Functions and Python.
- Collaborated with cross-functional teams to deploy NLP models into production using Azure ML pipelines, ensuring scalability and automated retraining based on new data inputs.

TECHNICAL SKILLS

Languages Python, SQL, Bash

Cloud Platforms Azure (ADF, Synapse, Blob Storage, Azure Functions, Azure ML, Azure DevOps)

Data Engineering Tools Azure Data Factory, Apache Airflow, PySpark, Kafka, Kafka Connect, Docker, REST APIs

Databases & Warehousing Azure Synapse Analytics, Azure SQL Database, PostgreSQL, SAP HANA, MongoDB

Streaming & Batch Processing Kafka, Spark Structured Streaming, Pandas, Scheduling & Triggers

Visualization & Reporting Power BI, Tableau (basic), Matplotlib, Seaborn, Excel

DevOps & Tools Git, Jenkins, VS Code, Shell, Postman, JIRA, Docker Compose, Azure DevOps Pipelines

PROJECTS

Tokyo Olympic Data Engineering Project

Azure, ADF, Databricks, Synapse, Power BI

- Architected and built an ELT pipeline using Azure Data Factory and Databricks to ingest, cleanse, and transform large-scale Olympic datasets, enabling efficient data analytics in Synapse.
- Created dynamic Power BI dashboards visualizing key performance metrics such as medal counts and athlete statistics, empowering data-driven insights for stakeholders.

Stock Market Data Pipeline with Apache Kafka

Azure, Kafka, Event Hubs, Databricks, Cosmos DB

- Developed a real-time streaming pipeline integrating Apache Kafka with Azure Event Hubs and Databricks to ingest, process, and enrich live stock market data from APIs.
- Stored processed data in Azure Cosmos DB for rapid querying and built monitoring solutions to ensure pipeline reliability and data integrity.
