PROFESSIONAL SUMMARY

Detail-oriented and highly analytical scientist with 4+ years of a strong background in medical devices and pharmaceuticals in laboratory research, data analysis, and regulatory compliance. I am seeking to ultimately pursue a career Clinical Research Associate role and open to entry-level roles. Experienced in GMP/GLP environments, with hands-on involvement in experimental design, sample management, data integrity, and quality documentation. I also bring a solid understanding of clinical trial protocols, patient safety, and GCP standards, coupled with excellent communication and organizational skills. I am eager to learn new therapeutic areas and support clinical research operations.

EDUCATION:

NORTH CAROLINA STATE UNIVERSITY

Bachelor of Science (B.S.): Textile Technology: Medical Textiles

Cum Laude | MAY 2022

Relevant courses and skills: HIPAA Regulations, ICH-GCP, Medical Terminology, cGMP/GLP/GDP, Data Management, Molecular Chemistry, Physics, Cellular/Molecular Biology, Calculus I / II / III, Biotextile Product Development, Biotextile Evaluation, Bio-Medical Ethics, Design & Technology Textiles, Medical Textile Regulatory Environment, Performance Evaluation of Textile Materials, Polymer Science and Engineering, Quality Management and Control in Textile Manufacturing

Certifications/Licenses:

- Pharmacy Technician License # 71672
- Certificate: IRB Basics Part 1: An Introduction to the IRB process at NC State
- Certificate: IRB Topical Workshop: Medical Devices and the IRB

SYSTEMS/SOFTWARE:

- Microsoft Office Suite
- Laboratory Information Management System (LIMS)
- Viscoelastic hemostatic assays: Quantra, TEG (Thromboelastography), and ROTEM (Rotational Thromboelastometry)
- Data Analysis & Visualization: MATLAB, Access, CypherOne
- AutoCAD
- CVS Pharmacy Systems: RxConnect, ScriptSync, LearningHUB (LMS)
- (Cell-based assays: Quant Studio, BioTek Gen5 (software 1.11), Invitrogen Live/Dead Cell Imaging Kit)
- Medrio EDC

EXPERIENCE:

HemoSonics – Durham, NC

Contract Associate Scientist-Assay Development

Mar 2024 - Mar 2025

- Assisted Validation & Verification phase for In-Vitro Diagnostic testing in reagent & product formulations experimental designs, and data analysis, for reports on an FDA-approved Point-of-Care

Medical Device

- Led Intern *"Time to Results"* project to propose quicker clot results, for clinician treatment by reprocessing 2000+ subjects' data, across Precision, Concordance and Reference Range clinical studies
- Demonstrated interpersonal skills and fostered relationships with Clinical Team to learn and support
- Assisted CRAs on Site Initiation Visits by:
 - Attended site Initiation visit to United Women's Healthcare to job shadow and assist in the installment of the Quantra Analyzer.
 - ensuring good documentation practices when collecting and filing personnel forms from sponsor/CRO into data capture systems

CVS Pharmacy - Durham, NC

Pharmacy Technician

Dec 2021 – Feb 2024

- Provided exceptional customer service through assistance in a challenging, fast-paced environment
- Improved efficiency of pharmacy operations through patient record/inventory management, prescription processing and insurance/billing verification
- Ensured compliance with pharmacy regulations and safety protocols

Q2 Solutions/IQVIA - Durham, NC

Associate Scientist

Sept 2022- Oct 2023

- Validated two hemagglutination (HAI) assays, & qualified within 6 months, to support Phase III Vaccine Clinical trials of over 1500+ samples
- Identified potential performance errors through data analysis using CypherOne and verified if results met acceptable tolerances, to record in Laboratory Information Management System (LIMS)
- Created a support training assay document to aid new trainees in assay qualification
- Cross-trained and supported Cell Team in cell culture development & characterization/PCR
- Supported Quality Assurance & company standardizations by organizing & filing documentation into company databases

Dr. Jessica Gluck's Lab-NC State - Raleigh, NC

Research Assistant

Jan 2022 – May 2022

- Supported a PhD project for publication with cell line development (NIH 3T3 & HiPSCs) for cardiomyocyte maturation (via in-vitro) and tested biocompatibility with implantable textiles
- Performed qualitative and quantitative sample analysis including Live/Dead and Alamar Blue Assays, and cell imaging with Light Microscopy, Fluorescence Microscopy, and a Scanning Electron Microscope
- Wrote scientific literature review on *"iPSCs and External Stimulation (Pneumatic Actuation) on Cardiomyocyte Maturation"* and presented the *"Pneumatic-driven fiber shaped robot as Active Scaffolds for Cell Culture"* project for course grade

Stryker Medical - NC State College Wilson of Textiles

Senior Design Project: Visual Brand Language (VBL) for Fluid Proof Mattresses

Aug 2021- May 2022

- Investigated and proposed a commercially viable method for communicating Stryker's VBL on their hospital mattresses' that doesn't damage the cover or degrade over time and use
- Created GANTT Chart and implemented an agile team approach to manage and ensure completion of timelines and tasks
- Met and fostered relationships with Stryker and NCSU personnel for the duration of prototype designs, AATCC testing, and measurables, that met customer requirements

Cortland Biomedical - Cortland, NY

Product Development Engineer Intern

May 2021 – Aug 2021

- Implemented a standardized interface, through Excel, which improved the streamline of clients orders, communication, and company work methodologies
- Assisted R&D team in developing high-performance, custom-built biomedical textiles for (implantable) medical devices/structures used in cardiovascular, robotic surgery, neurovascular, etc
- Demonstrated interpersonal skills by collecting and analyzing cross-functional information from engineers, operators, and manufacturers
- Participated in R&D product development, fabrication, detailed documentation, technical discussions, and risk-factor assessments throughout all phases of research development.
