

# Manish Reddy Andapally | Full Stack Java Developer

IL, USA | +1 (314)-575-7285 | [manishreddyandapally2000@gmail.com](mailto:manishreddyandapally2000@gmail.com) | [LinkedIn](#)

## Summary

Full Stack Java Developer with 3+ years of experience building scalable, secure, and high-performance web applications. Proficient in Java, Spring Boot, Hibernate, React.js, Angular, Node.js, and modern frontend-backend frameworks. Experienced in REST APIs, Microservices, GraphQL, cloud platforms (AWS/Azure), CI/CD, DevOps, databases, and application security. Skilled in Agile methodologies, problem-solving, system optimization, and delivering robust, maintainable solutions that meet business requirements and enhance user experience.

## Skills

- Programming Languages & Frameworks:** Java, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, React.js, Redux, Angular, TypeScript, JavaScript, Node.js, Express.js, JSP/Servlets, HTML5, CSS3, Bootstrap, Material-UI
- Backend Development & APIs:** RESTful APIs, GraphQL, Microservices Architecture, Event-Driven Architecture, Apache Kafka, RabbitMQ, Asynchronous Messaging, Serverless Services, Query Optimization, Performance Tuning
- Frontend Development & UI/UX:** React.js, Redux, React Hooks, Angular, Responsive Design, Single Page Applications (SPA), Lazy Loading, Cross-Browser Compatibility, UI Performance Optimization, Dashboard Design
- Databases & Data Management:** MySQL, PostgreSQL, Oracle, MongoDB, Redis, PL/SQL, Database Design & Normalization, Indexing & Query Optimization, Data Modeling, Caching Strategies
- Cloud & DevOps:** AWS (EC2, S3, EKS, RDS, Lambda, API Gateway, Elastic Beanstalk, CloudWatch), Azure, Terraform, Docker, Kubernetes (EKS/AKS), Jenkins, GitHub Actions, CI/CD Pipelines, Infrastructure as Code (IaC), Cloud Security Best Practices
- Testing & Quality Assurance:** JUnit, Selenium, Mockito, Jest, Enzyme, Postman, API Testing, Integration Testing, Unit Testing, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Performance Testing, Code Coverage & Quality Metrics
- Security & Compliance:** Spring Security, OAuth 2.0, JWT Authentication, SAML, AWS KMS, Identity & Access Management (IAM), HIPAA, GDPR, PCI-DSS Compliance, Application Security Best Practices
- Architecture & Design Patterns:** Domain-Driven Design (DDD), Clean Architecture, SOLID Principles, API Gateway Patterns, Layered Architecture, Serverless Architecture, Scalability & High Availability Design
- Collaboration & Productivity Tools:** Git, GitHub, Jira, Confluence, Maven, Gradle, Agile (Scrum/Kanban), Code Reviews, Pair Programming, Collaboration & Documentation Best Practices
- Additional Professional Skills:** Problem-Solving, Analytical Thinking, System Optimization, Performance Monitoring, Incident Debugging, Cross-Functional Team Collaboration, Agile Delivery, Mentorship & Knowledge Sharing

## Professional Experience

| Full Stack Java Developer   UnitedHealth Group   IL, USA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Dec 2024 – Present |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <ul style="list-style-type: none"><li>Developed the Claims Adjudication Optimization System using Spring Boot microservices and React.js, streamlining claims processing. Reduced claim latency by 28% for over 50k transactions, improving operational efficiency, scalability, and overall system performance.</li><li>Built dynamic React components with Redux and Hooks, creating interactive dashboards for members. Improved navigation, reduced front-end rendering time by 23%, and enhanced responsiveness for portal users, increasing user engagement and satisfaction.</li><li>Used CI/CD pipelines using Jenkins and GitHub Actions, automating build, test, and deployment workflows. Reduced manual deployment effort by 72%, ensured steady production releases, and maintained HIPAA-compliant security standards across multiple environments.</li><li>Created comprehensive JUnit and Postman integration test suites for REST APIs, increasing code coverage from 62% to 88%. Reduced recurring production defects, ensured stable claims workflows, and strengthened reliability and maintainability of backend services.</li><li>Integrated OAuth 2.0 and JWT-based authentication in patient and provider portals, securing sensitive healthcare data for 12,000+ users. Maintained HIPAA compliance, aligned with enterprise IAM standards, and provided secure, seamless access across applications.</li><li>Collaborated with QA, DevOps, and business teams to optimize backend algorithms and API performance. Led code reviews, enhanced system scalability, and contributed to faster claims adjudication while maintaining a robust, high-performance healthcare application.</li><li>Analyzed system logs and user feedback to identify performance bottlenecks and implement improvements. Optimized database queries and caching strategies, improving response times by 18% and increasing overall user satisfaction across the claims management platform.</li></ul> |                    |
