

Manoj Tumkur Shivashankar

Java Full Stack Developer | Spring Boot | React.js | Microservices | Kafka | AWS

+1-762-772-3993 | tsmanoj605@gmail.com | LinkedIn | Atlanta, GA - 30067

Professional Summary

Java Full Stack Developer with **6 years of experience** designing, developing, and supporting scalable enterprise applications using **Java, Spring Boot, Microservices, React.js, REST APIs, Apache Kafka, AWS, and SQL/NoSQL databases**. Strong experience building cloud-native and event-driven systems using Spring Boot, Spring Security, Spring Data JPA, Hibernate, Redis, and Kafka-based asynchronous processing. Experienced in developing responsive React Single Page Applications, reusable UI components, secure REST API integrations, and end-to-end business workflows. Skilled in SQL optimization, distributed systems, application performance, CI/CD, Docker, Kubernetes, Jenkins, Terraform, AWS deployments, production support, code reviews, and automated testing.

Professional Experience

Pursuit-Tech Inc.

Software Engineer / Java Full Stack Developer

Jan 2026 – Present

Atlanta, GA – Remote

- Refactored a large bid processing module into dedicated **Bid Service, Capacity Validation Service, and Bid Evaluation Service**, improving maintainability, scalability, and independent deployment.
- Collaborated with senior engineers to identify service boundaries and decompose business functionality into loosely coupled **Spring Boot microservices** following domain-driven design principles.
- Designed and implemented RESTful APIs between Bid, Truck Schedule, Customer, Pricing, and Capacity services to enable secure and efficient inter-service communication.
- Developed Bid Evaluation Service logic to validate route compatibility, shipment constraints, available trailer capacity, and bid pricing before selecting winning bids.
- Implemented asynchronous event-driven communication using **Apache Kafka** to publish and consume bid submission and bid award events, reducing synchronous dependencies between services.
- Developed capacity validation functionality to verify shipment weight and volume against available trailer space before customer bids were accepted.
- Implemented **Redis caching** for frequently accessed truck schedules and route information, reducing database load and improving API response times.
- Developed secure REST APIs using **Spring Security, JWT, role-based access control, DTO validation, and centralized exception handling**.
- Integrated **React.js applications with Spring Boot microservices** using REST APIs to support bid submission, bid tracking, customer workflows, and transportation schedules.
- Developed reusable React functional components and used **React Hooks** to manage component state, side effects, API communication, and user interactions.

Vectr Solutions Inc.

Software Engineer / Java Full Stack Developer

Dec 2024 – Dec 2025

Atlanta, GA – Remote

- Developed scalable **Java Spring Boot microservices** for a logistics bid management platform supporting bid processing, route matching, shipment validation, trailer capacity management, and bid status tracking.
- Designed secure RESTful APIs using Spring Boot, DTO validation, centralized exception handling, standardized JSON responses, pagination, filtering, and asynchronous processing.
- Implemented event-driven microservices using **Apache Kafka and Spring Kafka** for asynchronous processing, real-time data exchange, retry handling, dead-letter queues, and reliable message delivery.
- Built Kafka producers and consumers using fault-tolerant messaging patterns to support high-throughput event processing across distributed logistics workflows.
- Implemented authentication and authorization using **Spring Security, JWT, OAuth integrations, RBAC, and request-level validation**.
- Improved application performance using **Redis caching, multithreading, asynchronous processing, database indexing, and JPA/Hibernate query optimization**.
- Designed relational database schemas and optimized complex SQL queries using **MySQL, Spring Data JPA, and Hibernate** for high-volume transactional applications.
- Developed end-to-end business functionality using **React.js and Spring Boot**, integrating reusable frontend components with RESTful backend microservices.
- Built responsive React Single Page Application features using functional components, React Hooks, client-side routing, form validation, HTML5, CSS3, and Bootstrap.
- Integrated React applications with Spring Boot APIs to support logistics workflows including bid creation, shipment validation, route searches, pricing, and bid status tracking.
- Handled asynchronous API calls, backend validation responses, application errors, loading states, and dynamic UI updates within React applications.
- Integrated Salesforce Connected Apps with Spring Boot microservices using OAuth-secured REST APIs to automate CRM workflows and synchronize enterprise business data.

- Owned production support activities including log analysis, REST API debugging, Kafka consumer lag monitoring, database issue resolution, and root cause analysis.
- Developed automated unit and integration tests using **JUnit and Mockito**, improving regression coverage and deployment confidence.
- Collaborated with product owners, QA engineers, frontend developers, and business stakeholders in Agile Scrum environments while applying SOLID principles and design patterns.

CRST The Transportation Solution, Inc.

Software Engineer / Java Full Stack Developer

Jun 2023 – Dec 2024

Atlanta, GA

- Developed transportation rate estimation and logistics management platforms using **Java, Spring Boot, React.js, AWS, Kafka, and microservices architecture**.
- Designed scalable microservice architectures by defining service boundaries, REST API contracts, shared DTOs, and inter-service communication patterns.
- Engineered a high-throughput bulk estimation engine that processed customer-uploaded Excel manifests and generated freight estimates using Kafka-based asynchronous workflows.
- Eliminated API timeouts and improved scalability by implementing **event-driven Kafka processing** for file ingestion, validation, and large-scale data processing.
- Built and maintained RESTful APIs with pagination, filtering, validation, API versioning, centralized exception handling, and standardized error responses.
- Integrated **React.js applications with Spring Boot microservices** through REST APIs to support transportation and logistics business workflows.
- Developed reusable React functional components using React Hooks for component state, API interactions, side effects, and user-driven workflows.
- Built responsive Single Page Application functionality using **React.js, JavaScript, HTML5, CSS3, Bootstrap, and component-based architecture**.
- Implemented frontend forms and validations for transportation workflows including freight estimation, shipment information, customer details, and route searches.
- Integrated React components with REST APIs for retrieving and displaying transportation rates, shipment information, customer data, and estimation results.
- Optimized more than **20 complex SQL queries and database schemas** using Spring Data JPA, Hibernate, MySQL, and Elasticsearch.
- Architected relational database models for transportation domains including bids, shipments, routes, carriers, customers, pricing, and capacity management.
- Built and deployed cloud-native Spring Boot microservices on **AWS using EC2, S3, Lambda, RDS, Docker, Kubernetes, Jenkins, and Terraform**.
- Automated deployments using Docker, Kubernetes, Jenkins, Terraform, Git, and AWS services to support reliable production releases.
- Improved application reliability through JUnit, Mockito, retry mechanisms, fallback strategies, resilient microservice design, and production troubleshooting.

Versa Networks

Software Developer / Java Developer

Aug 2020 – Jun 2022

Bengaluru, India

- Developed backend Java features for a secure VPN/SASE client, enabling application launch from the system tray and secure pre-login connectivity before Windows user sign-in.
- Built Java backend components using **object-oriented programming, multithreading, exception handling, collections, and modular programming**.
- Implemented system tray execution logic to allow the VPN client to run continuously in the background, improving user accessibility and reducing manual connection steps.
- Contributed to pre-login connectivity capabilities that enabled secure network access before Windows login for enterprise authentication and remote access requirements.
- Designed and implemented backend diagnostics and structured logging capabilities to collect SASE client system logs and accelerate production troubleshooting.
- Collaborated within a four-member Agile engineering team using Git and JIRA across requirements analysis, development, code reviews, defect fixing, testing, and sprint delivery.

Netcracker Technologies

Software Developer Intern

Jan 2020 – Jul 2020

Bengaluru, India

- Trained in **Java and Spring Boot** and developed dynamic web applications using Spring MVC, REST APIs, and backend service development concepts.
- Contributed to developing and maintaining RESTful APIs using Java and Spring Boot under senior developer guidance.
- Participated in code reviews, debugging sessions, defect resolution, and application support activities to understand enterprise application architecture.
- Developed unit tests using **JUnit** and resolved defects identified during QA and application testing.

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, Apex, C#, PHP

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, SOAP Services, Microservices, JUnit, Mockito

Frontend: React.js, JavaScript, TypeScript, React Hooks, Functional Components, Component-Based Architecture, REST API Integration, HTML5, CSS3, Bootstrap, Single Page Applications

Microservices: Spring Boot Microservices, REST Communication, Event-Driven Architecture, Service Decomposition, API Gateway, Distributed Systems, Resilience Patterns

Messaging & Caching: Apache Kafka, Spring Kafka, Kafka Producers, Kafka Consumers, Retry Handling, Dead-Letter Queue, Redis

Databases: MySQL, PostgreSQL, Oracle, MongoDB, Elasticsearch, SQL, Spring Data JPA, Hibernate, SQL Query Optimization

Cloud & DevOps: AWS EC2, S3, Lambda, RDS, API Gateway, CloudWatch, CloudFormation, Docker, Kubernetes, Jenkins, Terraform, Git, CI/CD

Security & Integrations: Spring Security, JWT, OAuth, Role-Based Access Control, Salesforce Connected Apps, REST Integrations

Tools & Practices: Agile Scrum, JIRA, GitHub, GitHub Copilot, Generative AI Tools, Code Reviews, Production Support, SOLID Principles, Design Patterns

Education

The University of Georgia	Aug 2022 – May 2024
<i>Master of Science in Computer Science</i>	<i>GPA: 3.90 / 4.0</i>
Siddaganga Institute of Technology (SIT), Tumkur	Aug 2016 – Jun 2020
<i>Bachelor of Engineering in Computer Science and Engineering</i>	<i>GPA: 8.75 / 10.0</i>
