SUMMARY

Software engineer with experience building AI-powered developer tools, real-time web applications, and games. Proven ability to lead teams, architect end-to-end features in React/TypeScript and Java, and deliver user-focused solutions.

EDUCATION

California State University, Sacramento

Bachelor of Science in Computer Science

Sacramento, CA

January 2023 - May 2025

EXPERIENCE

Software Engineer Intern

Hewlett Packard Enterprise

June 2024 – Aug. 2024

San Jose, CA

- Architected AI assistant feature in HPE developer portal using **React** and **TypeScript**, integrating **OpenAI Assistant API** with **TanStack Query** for data fetching.
- Designed conversational prompt flows and front-end interactions, enabling developers to query logs on-demand and reducing manual debugging effort.
- Implemented unit tests with **Jest** and end-to-end tests with **Cypress**, increasing feature reliability.

PROJECTS

MigrateEasy | *Next.js 15, TypeScript, Supabase, PDF-lib*

June 2025 – Present

- Developed comprehensive N-400 naturalization platform with guided 16-section form wizard, real-time validation, and auto-save functionality.
- Architected dynamic form system with progressive disclosure, implementing custom components for complex data entry with add/remove functionality.
- Built secure authentication using **Supabase** with Row Level Security, implementing protected routes and encrypted data handling.
- Engineered multi-method PDF export using **pdf-lib**, supporting direct form filling and USCIS-compliant N-400 submission.

ServiceSync | *React, TypeScript, Firebase, React Native*

August 2024 – May 2025

- Led team of 8 building real-time job-scheduling app for 10-employee plumbing company using **Firebase** for live data synchronization.
- Implemented user authorization, permissions, and real-time database using Firebase.
- Created administration features for adding employees, assigning jobs, and exporting job data in spreadsheet form.

Gordon's Pizza | *Java, TAGE, GitHub*

March 2025 – May 2025

- Developed pizza restaurant simulator in Java using **TAGE** engine with customer and thief AI using finite state machines.
- Engineered collision detection via invisible physics shells, integrating seamlessly with player and AI movement.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C/C++, HTML, CSS

Frameworks & Libraries: React, React Native, Node.js, Next.js, TanStack Query

APIs & Services: OpenAI Assistant API, Firebase, Supabase, QuickBooks API

Testing & Tools: Jest, Cypress, Git, Docker, CI/CD
