SUMMARY

BI Engineer/Analyst with 3+ years of experience designing data models, building ETL pipelines, and delivering analytics solutions in workforce and logistics domains. Skilled in Power BI, SQL, Python, Tableau and Azure with expertise in processing large datasets, designing intuitive dashboards and optimizing reporting workflows. Strong communicator with a track record of aligning technical solutions to business needs and enabling data-driven decision-making.

SKILLS

Analytics & Visualization: Power BI (DAX, Power Query, RLS, Apps, REST API), Tableau (dashboards, data blending, calculations), Excel (Pivot Tables, Power Query)

Data Engineering & Warehousing: SQL Server (T-SQL, joins, CTEs, stored procedures), PostgreSQL, star schema, fact/dimension modeling

Programming & Statistical Analysis: Python (pandas, NumPy, scikit-learn), Regression modelling, Forecasting, Data Profiling

ETL & Automation: Azure Data Factory, Azure SQL, Databricks, automated pipelines, REST API, Power Automate

Collaboration: GitHub, MS Visual Studio, Jira, Agile/Scrum collaboration, BRD/DFD

WORK EXPERIENCE

Business Intelligence Engineer | Polarpro Personnel Solutions Ltd. | Aug 2022 – Present

- Led end-to-end BI initiatives across workforce, logistics, and warehouse operations, building scalable ETL pipelines in Azure Data Factory and SQL to process 200M+ rows monthly from HR, finance, and logistics systems.
- Built Python scripts for data processing, forecasting budget, and statistical analysis of staffing and operational trends.
- Designed and delivered interactive dashboards in Power BI and Tableau to track workforce KPIs, logistics performance, finance and budget and warehouse operations improving client retention by 15% while contributing to revenue growth.
- Implemented Row-Level Security (RLS) roles and managed access policies to ensure data confidentiality for regional managers and operations teams.
- Automated dataset refreshes and report deployments via REST API, reducing manual intervention by 50% and ensuring consistent, timely delivery of analytics to end users.
- Supported migration of legacy CRM data to Azure SQL, ensuring data integrity.
- Architected and maintained data warehouses using star schema and fact/dimension modeling, enabling scalable analytics across workforce, logistics, and finance domains.
- Developed partitioning and indexing policies in SQL to optimize query performance for high-volume operational datasets.

- Extracted and standardized metadata from Power BI reports and datasets using REST API, enabling data lineage tracking and improved compliance across workforce and logistics reporting.
- Built a proof-of-concept Tableau dashboard for logistics demand forecasting, visualizing 1M+ records with advanced filters and drilldowns; findings later integrated into Power BI production dashboards.
- Bridged the gap between technical solutions and business needs by conducting BI training sessions and authoring BRDs/DFDs, ensuring clarity on data definitions and dashboard usage.
- Collaborated with cross-functional teams in Agile environments to gather requirements and deliver tailored BI solutions.

EDUCATION

Master of Science, Data Science

Tampere University, Finland | 2025

Core coursework: Knowledge Mining and Big Data, Statistical Inference, Pattern Recognition and Machine Learning, Statistical Modelling, Advanced Database Systems, Time Series Analysis, Spatial Data Analysis

Bachelor of Engineering in Computer Science

PSNA College of Engineering and Technology, India | 2015 - 2019

Core coursework: Database Management Systems, Object Oriented Programming, Artificial Intelligence, Data Mining, Algorithms and Data Structures, Cloud Computing
