- Maintained accurate records and supported system-based tracking of orders and operational data across platforms.

ACADEMIC PROJECTS

Event Management System – Final Year Project

March 2025

- Collaboratively developed full-featured event management website with a teammate using HTML,CSS,JS,Bootstrap.
- Created modules for managing two types of events:Weddings(Destination,Beach,Palace), Birthdays .
- Designed a responsive frontend with interactive forms and implemented backend logic for user registration and event handling.
- Built an admin dashboard with full CRUD operations and real-time databse connectivity using phpMyAdmin.
- Used Visual Studio Code as the primary code editor and managed the database using phpMyAdmin.
- Achieved a project score of 194 out of 200, highlighting strong technical execution.

Static Education website(4th semester project)

Dec 2023

- Independently developed a mini website using PHP,HTML,CSS,JS, and SQL.
- Implemented features including login/signup form, user dashboard, about/contact pages,courses section, and course purchase form.
- Used Visual Studio Code as the primary code editor and managed the database using phpMyAdmin.

Classic snake Game – Collaborative Project

August 2022

- Developed a Classic snake game in collaboration with partner using HTML,CSS, and JavaScript.
- Built game logic with keyboard controls, collision detection, and live score tracking.
- Applied core javascript concepts such as loops, arrays, event listners, and timing functions.
- Although simple, the project was well structured and effective in reinforcing frontend programming skills.
