SUMMARY

Data Analyst with 5+ years of experience delivering business intelligence, operational reporting, and data analytics solutions across banking, healthcare, and insurance. Experienced in **SQL Server, T SQL, Azure SQL Database, Power BI, DAX, Python (Pandas, NumPy, Scikit learn), Azure Data Factory (ADF), SSIS, and Excel**. Strong background in SQL development, dashboard creation, ETL validation, data reconciliation, reporting automation, UAT, and production support. Experienced in using Python for trend analysis, forecasting, and anomaly detection while working closely with business and technical teams to deliver accurate reporting and practical insights that support day to day business decisions. Proven track record of automating operational reporting, optimizing data quality across Azure cloud environments, and reducing manual prep time by over 30%. Adept at bridging technical data engineering with executive-level business strategy in Agile/Scrum environments.

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit learn, PySpark), SQL, T SQL

Databases: Databases & Warehouses: SQL Server, Azure SQL Database, Snowflake, PostgreSQL, Redshift, BigQuery

Business Intelligence: Business Intelligence: Power BI (DAX, Power Query), Tableau, Looker

Cloud & Data Integration: Azure Data Factory (ADF), SSIS, dbt, AWS S3, Apache Airflow

Data Analytics: Data Analysis, Profiling, Validation, Reconciliation, Root Cause Analysis, A/B Testing, Hypothesis Testing, Statistical Analysis, Anomaly Detection, KPI Reporting

Machine Learning: Scikit-learn, Predictive Modeling, Time Series Forecasting, Azure AI Studio

SQL Development: Complex Joins, CTEs, Window Functions, Stored Procedures, Views, Aggregations, Query Optimization, Indexing

Microsoft Excel: Advanced Excel, Pivot Tables, Power Query, XLOOKUP, VLOOKUP, VBA/Macros

Version Control & Collaboration: Git, Azure DevOps

Methodologies: Agile, Scrum, SDLC, UAT, Production Support, Data Governance, HIPAA Compliance

EXPERIENCE

Data Analyst | Jack Henry | Springfield, MO | Feb 2025 – Present

Project: Digital Banking & Payment Operations Analytics Platform

- Worked with Digital Banking, Payment Operations, Finance, Fraud, and Product teams to translate reporting requirements into SQL-based analytical solutions supporting payment operations and executive reporting.
- Designed and maintained **Power BI** dashboards to monitor payment volumes, transaction success rates, settlement performance, customer adoption, operational KPIs, and exception trends, giving business teams near real-time visibility into platform performance.
- Developed and optimized complex **T-SQL** queries, stored procedures, CTEs, and window functions across **SQL Server** and **Azure SQL Database** to prepare reporting datasets and improve query performance for large payment data volumes.
- Validated data pipelines built with **Azure Data Factory (ADF)** and **SSIS**, performed reconciliation between source and target systems, and resolved data quality issues before production reporting cycles.
- Automated payment trend analysis and recurring reporting using **Python (Pandas, NumPy)**, reducing manual data preparation and accelerating ad hoc business analysis.
- Built forecasting and anomaly detection models using **Scikit-learn** in **Azure AI Studio** to predict transaction volumes and identify unusual payment behavior, helping operations teams proactively manage workload and investigate exceptions.
- Supported UAT, production releases, and reporting enhancements by partnering with business users, documenting technical changes, maintaining version-controlled SQL scripts in **Git**, and resolving production reporting issues.

Key Contributions

- Reduced manual reporting effort by **35%** across 4 functional teams by standardizing snowreusable **Power BI** dashboards and SQL reporting datasets.
- Improved reporting accuracy through automated reconciliation and data quality validation across payment reporting processes.
- Enabled faster operational decisions by providing near real-time visibility into payment settlement and transaction performance.
- Improved workload planning through AI-assisted transaction forecasting and anomaly detection.

Data Analyst | Zing Health | Chicago, IL | Aug 2023 – Jan 2025

Project: Medicare Advantage Quality & Population Health Analytics

- Partnered with Quality, Care Management, Provider Operations, and Business teams to analyze member enrollment, claims, provider, and HEDIS data supporting operational reporting and quality improvement initiatives.
- Developed interactive **Power BI** dashboards that tracked member growth, provider performance, care management activities, quality scores, and operational KPIs used by leadership for performance reviews.
- Built and optimized **T-SQL** queries using joins, CTEs, window functions, and aggregations to prepare recurring reporting datasets for operational analysis, regulatory reporting, and ad hoc requests.
- Performed data profiling, reconciliation, and quality validation on claims and enrollment datasets, investigated reporting discrepancies, and verified **SSIS** ETL loads before scheduled reporting cycles.
- Used **Python (Pandas, NumPy)** and **Excel (Power Query, Pivot Tables, XLOOKUP)** to analyze utilization patterns, provider performance, and healthcare quality trends, supporting data-driven operational decisions.
- Participated in Agile ceremonies, supported UAT for reporting enhancements, managed work items in **Azure DevOps**, and resolved production reporting issues to ensure reliable delivery of business reports.

Key Contributions

- Standardized reporting datasets that reduced manual report preparation across multiple business teams.
- Improved reporting accuracy through consistent validation and reconciliation of healthcare data.
- Delivered timely operational insights into member enrollment, provider performance, and HEDIS quality metrics.

Data Analyst | The Plexus Groupe | Dallas, TX | Jul 2022 – Apr 2023

Project: Commercial Insurance Portfolio & Client Performance Analytics

- Supported underwriting, account management, and claims teams by analyzing policy, premium, renewal, and claims data to monitor portfolio performance and client profitability.
- Developed reusable **T-SQL** reporting solutions across **SQL Server** and **Azure SQL Database** to support renewal forecasting, premium analysis, claims reporting, and broker performance reviews.
- Created **Power BI** dashboards that provided visibility into policy renewals, premium growth, claims ratios, client retention, and operational KPIs for business leadership.
- Performed reconciliation and data quality validation on policy and claims datasets, verified **SSIS** data loads, and resolved reporting discrepancies before monthly reporting cycles.
- Used **Python (Pandas)** and **Excel (Power Query, Pivot Tables, XLOOKUP)** to analyze renewal trends, claims activity, and client performance while supporting ad hoc reporting requests.
- Worked closely with business users during UAT, documented reporting enhancements in **Azure DevOps**, maintained SQL code in **Git**, and provided production reporting support.

Key Contributions

- Reduced manual effort in monthly portfolio reporting through standardized SQL reporting solutions.
- Improved business reporting accuracy by identifying and resolving data discrepancies before production reporting.
- Delivered portfolio performance insights that supported underwriting decisions and client retention strategies.

Data Analyst | NextGen Healthcare India Pvt. Ltd. | Bengaluru, India | Jan 2020 – Jul 2021

Project: Clinical Operations & Practice Performance Analytics

- Analyzed appointment scheduling, provider utilization, billing, referral, and clinical operations data using **SQL Server**, **SQL**, and **Excel** to support daily operational reporting across healthcare practices.
- Developed **Power BI** dashboards that tracked appointment volumes, provider utilization, cancellation rates, referral activity, and operational KPIs, reducing weekly report preparation by 2–3 hours.
- Conducted data validation, reconciliation, and quality checks on reporting datasets, investigated reporting inconsistencies, and verified **SSIS** data loads to improve reporting reliability.
- Used **Python (Pandas, NumPy)** and **Excel (Power Query, Pivot Tables, XLOOKUP)** to automate routine data preparation and operational reporting, reducing turnaround time for ad hoc requests.
- Supported UAT by validating report outputs against business requirements, documenting issues, verifying fixes, and maintaining SQL scripts and reporting documentation in **Git**.
- Worked with business analysts, clinical operations teams, and developers to deliver reporting enhancements and resolve production reporting issues affecting business users.

Key Contributions

- Reduced weekly reporting effort through reusable SQL reporting solutions and **Power BI** dashboards.
- Improved report accuracy by identifying and resolving data quality issues before production reporting.
- Accelerated ad hoc reporting through automated data preparation using **Python** and **Excel**.
- Delivered standardized operational dashboards that improved visibility into clinic performance and provider utilization.

EDUCATION

- Master of Science in Information Systems | TX, USA | University of Texas at Arlington (AUG 2021- MAY2023)
- Bachelor of Technology in Instrumentation and Control | Karnataka, India | Manipal Institute of Technology, Manipal (JUNE 2017 – JULY 2021)
