---

**SUMMARY:**

- **10+ years** of extensive experience in design, development, Implementation & maintenance of **Informatica ETL** processes, OLTP & Data Warehouse systems, Business Intelligence and Enterprise Application Integration.
- Around **3 years** into **Snowflake** using **dbt** transformation tools.
- Solid expertise in Data Extraction, Data Migration, Data Transformation and Data Loading using ETL process
- Experience in all the phases of life cycle involving Requirement Analysis, Design, Coding, Testing, and Deployment.
- Experience in **Snowflake** cloud data warehouse and **AWS S3** for integrating data from multiple source systems which include nested **JSON** formatted data into snowflake tables
- Experience using **Qlik** tool to replicate data from different on perm data sources like Oracle/SQL server into **snowflake** schemas.
- Used **Fivetran** to replicate tables in **Snowflake**.
- Experience working on moving on perm data into cloud using various cloud tools like **Qlik** and **dbt**.
- Extensively used **dbt** to transform data by creating different model, seeds, yml files from the stage tables in snowflake and built various other views.
- Used **Airflow** to run and schedule the dbt jobs, have written **Python** scripts in airflow to trigger the dbt jobs.
- Proficient in **data modeling** for OLTP relational databases and Data warehouse applications using Ralph Kimball and Bill Inman design principles including Facts and dimensions tables, **Slowly Changing Dimensions (SCD)** and **Dimensional Modeling** - Star and Snow Flake Schema.
- Proficient in designing and developing **Data Marts** in a data warehouse for business subject areas.
- Experience in integration of various data sources like **Oracle, Teradata, DB2, Sybase, SQL server, MS Access** and non-relational sources like **Flat files** and **XML files** into staging area.
- Experience in identifying bottlenecks in ETL Processes and **Performance tuning** of applications using **Database Tuning, Partitioning, Index Usage, and Aggregate Tables, Session partitioning, Load strategies, commit intervals and transformation tuning**.
- Expertise in implementing Change Data Capture (CDC), Operational Data Store for real-time data (ODS), Incremental extracts and slowly growing target for data warehouses.
- Strong **SQL, PL/SQL, T-SQL** programming skills in **Oracle 12c/11g, SQL Server 2017/2012, Teradata 14** and **DB2** databases. Proficient in writing **Packages, Stored Procedures, Triggers, Views, Indexes** and **query optimization**.
- Expertise in deploying and maintaining Informatica ETL code in Production environment.
- Extensive experience with **Teradata SQL Assistant** and Teradata Load/Unload utilities like **TPUMP, Fast Export, Fast Load, MultiLoad** and **BTEQ**.
- Experience with issue and project management tool **JIRA** to track defects. Solid experience in project documentation including Technical specifications and Technical Design Documents (TDD). Extensively involved in **Quality Assurance**, bug fixing and testing. Prepared user manuals, presentations and trained users and operators.
- Strong trouble-shooting, problem solving, analytical and design skills combined with effective communication, professional attitude, strong work ethic and interpersonal skills.

## TECHNICAL SKILLS:

|                                       |                                                                                                                                                                           |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ETL Tools</b>                      | dbt, Workflow Manager, Workflow Monitor, Designer, Server Manager, Repository Manager.                                                                                    |
| <b>Data Quality Tools</b>             | IDE, Informatica Data Quality IDQ                                                                                                                                         |
| <b>Databases:</b>                     | Oracle 12c/11g/10g, MS-SQL Server 2017/2012, DB2, Teradata 14, Snowflake Cloud                                                                                            |
| <b>Operating Systems:</b>             | Windows Server 2012/2008, Windows 10/7, UNIX                                                                                                                              |
| <b>Languages:</b>                     | C, C++, UNIX Shell Scripts, MYSQL, SQL, T-SQL, PL/SQL, XML, JSON, Java Script, Python                                                                                     |
| <b>Web Tech:</b>                      | HTML/CSS                                                                                                                                                                  |
| <b>GUI and Others:</b>                | Toad 12/10, SQL Developer, SQL Loader, SQL Plus, Erwin, Teradata SQL Assistant, JIRA, Qlik, fivetran                                                                      |
| <b>Reporting Tools</b>                | Tableau 9/8                                                                                                                                                               |
| <b>Development Methodologies</b>      | Agile/Scrum, Waterfall                                                                                                                                                    |

## PROFESSIONAL EXPERIENCE:

**Client:** DirecTV, Los Angeles, CA  
**Sr. Data Engineer (dbt/Snowflake)**

**April 2018 – Present**

### Responsibilities:

- Worked closely with business teams to understand and analyze data integration requirements for 7 source systems in an Agile Sprint development environment.
- Partnered with integration architects to document the detailed technical design and specifications for ETL transformations & mappings
- Extensively used transformations like **Source Qualifier, Joiner, Update Strategy, Rank, Expression, Connected /Un-connected Lookup, Router, Filter, Aggregator and Sequence Generator**.
- Used **FiveTran** and **Qlik** to move data across cloud platforms.
- Extensively worked on Informatica Data Quality (IDQ 9.6.1) for data analysis, data cleansing, data validation, data profiling and matching/removing duplicate data.
- Responsible in migrating on premise data to Snowflake cloud using Qlik replication process.
- Transformed data in **snowflake** using **dbt** transformation tools.
- Developed various model and seeds in **dbt** to transform and add the data quality checks on the staging data in **snowflake**.

- Developed the **AWS Data pipelines** from various data resources in AWS including AWS API Gateway to receive responses from **AWS Lambda** and retrieve data and converted responses into JSON format and stored them in **AWS redshift**.
- Experienced in collecting data from an **AWS S3 bucket** in real time using Spark Streaming, doing the appropriate transformations and aggregations, and persisting the data in HDFS.
- Developed **python** scripts to run the dbt jobs in airflow and to schedule them on weekly basis.
- Developed **SQL, PL/SQL** in **Oracle 12c** database to extract data from multiple source systems.
- Responsible for analyzing bottle necks and performance tuning in ETL mappings.
- Performed thorough data profiling to understand the quality of source data and to find data issues using IDQ.
- Involved in massive data profiling using IDQ prior to data staging.
- Developed detailed Change Implementation documents for Production deployments at the end of each Sprint.
- Extensively used **Jira** for tracking User Stories, Tasks, and Issues. Worked closely with business and QA to resolve issues identified in testing phase.
- Worked on version control of metadata using **GIT (GitHub)**.
- Responsible for Production Support and maintenance of ETL applications.
- Verifying the reports and dashboards to utilize data for interactive dashboards in **Tableau** based on business requirements.

**Environment: Informatica PowerCenter 10.1, IDQ, Oracle 12c, Toad 12, SQL, PL/SQL, Unix, Snowflake, SnowPipe, Snowflake tables, Snowflake schemas, AWS S3, dbt and Qlik**

**Client: Westpac, Hyderabad, India**  
**Senior ETL/DW Consultant**

**Nov 2014 - Feb 2016**

**Responsibilities:**

- Analyzed country specific requirements and performed impact analysis in GRW Oracle data warehouse to identify interfaces and reports that needs to be modified as part of ERP R14/R18 projects.
- Responsible to update/maintain GRW data warehouse in Oracle and integrate new SAP financial system data from PeopleSoft into the data warehouse.
- Worked on **Informatica PowerCenter 9.5.x** designer tools **Source Analyzer, Warehouse Designer, Transformation Developer, Mapplet Designer and Mapping Designer**.
- Designed and developed complex **ETL mappings** making use of transformations like **Source Qualifier, Joiner, Update Strategy, Connected Lookup and unconnected Lookup, Rank, Expression, Router, Filter, Aggregator and Sequence Generator**.
- Used **IDQ** to cleanse and accuracy check the project data, check for duplicate or redundant records.
- Performed thorough data profiling to understand the quality of source data and to find data issues using IDQ.
- Used **Informatica Data Quality (IDQ)** for data quality, integration and profiling.
- Created complex **SCD Type 1, Type 2 and Type 3** mappings using **Dynamic Lookup, Joiner, Router, Union, Expression** transformations.
- Involved in migration of mappings and sessions from development repository to Integration and Production environments.
- Responsible for Unit testing and Integration testing of mappings and workflows. Extensively used

**Informatica PowerCenter Data Validation** tool to unit test the ETL mappings.

- Responsible to cleanse and standardize source data using **Informatica Data Quality** tool.
- Developed Packages, Stored Procedures, and Cursors & Views in **Oracle PL/SQL** to incorporate country specific requirements for SAP downstream applications.

**Environment:** Oracle 11g, Toad, Informatica Power Center 9.5, IDQ, UC4, UNIX, SQL, PL/SQL.

**Client:** Cisco, Hyderabad, India

**Informatica Developer**

**May 2011 – Oct 2014**

**Responsibilities:**

- Translated business requirements into functional specifications. Designed and developed process flows for ETL to load data to the data warehouse.
- Designed and maintained logical and physical enterprise data warehouse schemas using Erwin.
- Worked with Enterprise Architects to do dimensional modeling for the data warehouse. Developed **Fact** and **Dimension** tables implementing **Star Schema** in the data warehouse
- Extracted Erwin physical models into repository manager using **Informatica Power Plug**.
- Integrated different systems using Informatica server configuration. Extracted data from **Flat files, Oracle 10g, SQL Server 2005, MS-Access** and loaded data into Oracle using **Informatica PowerCenter**.
- Created **Source definitions, Target definitions, Mappings, Transformations, Reusable Transformations, Mapplets** using **Informatica Designer** tool.
- Worked with **Source Analyzer, Warehouse Designer, Transformation Developer, Mapping Designer** and **Mapplet Designer**.
- Worked extensively on different types of transformations like **Source Qualifier, Expression, Filter, Aggregator, Rank, Update Strategy, Lookup, Stored procedure, Sequence generator** and **Joiner** transformations.
- Created sessions, database connections and batches. Scheduled and monitored transformation processes using **Informatica Server Manager**.
- Used **Informatica Repository Manager** to backup and migrate metadata in development, test and production systems.
- Developed custom business intelligence reports in Cognos Impromptu.

**Environment:** Informatica Power Center 8.6, Cognos Impromptu 6.0, Impromptu web reports (IWR 6.0), UNIX, IIS 4.0, PL/SQL, Oracle 10g, SQL Server 2005, T-SQL and Win NT.

**EDUCATION**

**BACHELOR OF TECHNOLOGY** – *Computer Science & Engineering* 2011

**Aurora's Technological & Research Institute** – Jawaharlal Nehru Technological University.

Hyderabad, India
