SUMMARY

Data Analyst with 3 years of experience in data extraction, transformation, and analysis using tools such as SQL, Python, Excel, and R. Proficient in building interactive dashboards with Tableau and Power BI, creating ETL workflows, and performing advanced statistical analysis. Skilled in delivering data-driven insights through predictive modeling, big data processing, and cloud technologies that support decision-making. Strong collaboration skills with expertise in optimizing data pipelines and database management.

WORK EXPERIENCE

Humana

Jan 2024 - Present

Data Analyst

USA

- Utilized SQL to extract and transform large datasets, improving query efficiency by 25% for critical business reports by optimizing database queries in Microsoft SQL Server.
- Designed and automated ETL workflows using Informatica to streamline data ingestion from multiple cloud and on-premise sources, reducing data processing time by 40%.
- Built Tableau dashboards to visualize financial performance data and track KPIs, reducing manual reporting efforts by 50% and increasing data-driven decision-making.
- Performed data cleaning and transformation with Python (Pandas, NumPy) to prepare data for analysis, improving overall data quality and reducing inconsistencies by 35%.
- Applied time series forecasting models using Python's statsmodels and Scikit-learn, enhancing financial forecasting accuracy by 15%.
- Conducted statistical analysis using ANOVA and linear regression to evaluate the impact of new marketing strategies on customer acquisition.
- Developed and implemented a data warehouse strategy on AWS Redshift, improving data accessibility for the entire business unit and reducing downtime by 20%.
- Automated report generation and data extraction using Python scripts, integrating with APIs for real-time data feeds, reducing manual workload by 30%.
- Collaborated with business teams through Microsoft Teams and Confluence, ensuring alignment on data-driven projects and improving communication and workflows.

CitiusTech

Jan 2020 - Jan 2022

Data Analyst

India

- Created Power BI dashboards for real-time analytics on healthcare provider performance, enabling executive teams to make data-driven decisions and optimize operational processes.
- Designed and managed end-to-end ETL pipelines using Talend and SSIS to integrate healthcare data from on-premise servers and cloud storage into a centralized PostgreSQL database, improving data accuracy by 30%.
- Conducted customer segmentation analysis using clustering techniques (K-Means, DBSCAN), resulting in a 15% reduction in healthcare operational costs through optimized resource allocation.
- Built predictive models using Scikit-learn and Python's XGBoost, forecasting patient admission trends, which improved resource planning accuracy by 18%.
- Leveraged R programming for advanced statistical analysis (Chi-square tests, t-tests) on clinical trials data, leading to the optimization of healthcare practices and a 10% improvement in patient outcomes.
- Implemented data quality checks using SQL and Python to validate the integrity of healthcare data pipelines, improving data accuracy by 40%.
- Utilized Snowflake as the primary data warehouse for big data storage, enabling efficient large-scale data analysis and reporting, which improved reporting speed and accuracy.
- Led A/B testing for marketing campaigns, using statistical techniques to determine the most effective strategies for increasing customer engagement.
- Applied data wrangling techniques in Python to prepare unstructured data for analysis, reducing manual data preparation time by 25%.
- Ensured compliance with healthcare data governance policies using Reltio for master data management, improving data security and privacy.

SKILLS

- **Methodologies:** SDLC, Agile/Scream, Waterfall
- **Data Analysis Tools:** SQL, Python (Pandas, NumPy, Matplotlib), R, Excel
- **Database Management:** MySQL, Microsoft SQL Server, PostgreSQL, Oracle, Snowflake, AWS Redshift
- **Data Visualization:** Tableau, Power BI, Google Data Studio, Matplotlib, Seaborn
- **ETL & Workflow Automation:** Informatica, Talend, SSIS, Alteryx
- **Cloud Platforms:** AWS, Google Cloud Platform, Microsoft Azure
- **Statistical Analysis:** Regression, ANOVA, Chi-square tests, t-tests, Time Series Analysis
- **Big Data Processing:** Hadoop, Spark, Snowflake
- **Predictive Modeling:** Scikit-learn, XGBoost, TensorFlow, Time Series Forecasting
- **A/B Testing:** Statistical Hypothesis Testing, t-tests, Chi-square tests
- **Collaboration Tools:** Microsoft Teams, Confluence, Slack

EDUCATION

University of Houston - Clear Lake, TX, USA

Master of Science, Data Science

Jan 2022 - Dec 2023

Clear Lake, TX, USA

K L University, India

Bachelor, Electronics and Communication Engineering

Jun 2017 - May 2021

India

CERTIFICATIONS

- **Microsoft Power BI Desktop:** from Udemy in 2024
- **Java certification:** successfully through Wipro Talent Next

PROJECTS

Big Data Quality Scoring for Structured Data Using MapReduce (Hadoop MapReduce, Binomial testing)

- Developed a pioneering Data Quality Score Model that intricately addresses key dimensions such as accuracy, completeness, consistency, correlation, and timeliness through the implementation of the Hadoop MapReduce framework.
- Successfully executed and concluded the project, showcasing a keen focus on precision and efficiency in managing large-scale datasets. OS - Ubuntu 20.04.

Fuel Consumption (R programming)

- Analyzing features of the vehicle contribute most to CO2 emission and fuel consumption.
- Finding out which vehicle class have more fuel consumption.
- Performed Data cleaning, Data Transformation, Data reduction, Variable selection for model building. Tool - R Studio.

Covid Data Analysis using Covid Dataset (MySQL, Hive, Hadoop)

- Based on the raw data of covid collected from different parts of India, which is provided by an organization, designed queries to obtain the status of total population tested, recovered, and deceased.
- Ran multiple Hive queries to do analysis over the dataset like: Number of people deceased in a particular region, count of the deceased on a specific date, etc. Platform - Cloudera.
