

Naveen Nalamothu Data Analyst

naveen@techcareermail.com | (940) 594-8734 | USA | [LinkedIn](#)

Summary

Data Analyst with 2+ years of proven experience in financial services, specializing in AI-powered analytics, fraud detection, and market intelligence. Skilled in Python (Pandas, NumPy), PySpark, SQL, and advanced machine learning models (XGBoost, LSTM, Isolation Forests, Autoencoders). Proficient in NLP (FinBERT, SpaCy, NLTK), predictive modeling, and dashboard development using Power BI and Tableau. Adept at leveraging AWS, Azure, and Agile tools (Jira, Confluence) to deliver actionable insights, enhance compliance, and optimize investment and fraud prevention strategies.

Technical Skills

- Programming & Data Processing:** Python (Pandas, NumPy), R, SQL, PySpark, Excel
- Machine Learning & AI:** Scikit-learn, XGBoost, Random Forest, LSTM, Autoencoders, Isolation Forests
- Natural Language Processing (NLP):** FinBERT, SpaCy, NLTK, Transformers
- Data Visualization:** Power BI, Tableau, AWS QuickSight, Matplotlib, Seaborn
- Cloud & Data Engineering:** AWS (S3, Glue, Redshift), Azure (Data Factory, Machine Learning, Databricks), Snowflake
- Databases & Warehousing:** MySQL, PostgreSQL, Oracle, MongoDB
- Statistics & Analytics:** Hypothesis Testing, Regression, Forecasting, Time-Series, A/B Testing
- Collaboration & Tools:** Agile, Jira, Confluence, Git, GitHub

Professional Experience

- Data Analyst, Edward Jones Investments**10/2024 – Present | Remote, USA
- Initiated the AI-Powered Financial Sentiment & Market Intelligence project by conducting requirement gathering sessions with stakeholders, defining KPIs, and designing a roadmap to integrate multi-source financial data into AWS S3 and SQL databases for analysis.
 - Cleaned, transformed, and normalized unstructured datasets using Python (Pandas, NumPy) and PySpark, removing noise and preparing consistent text corpora that enhanced the accuracy of Natural Language Processing workflows across multiple financial data sources.
 - Applied NLP models including FinBERT, SpaCy, and NLTK to extract sentiments, named entities, and event triggers, enabling the system to identify and categorize market-moving signals affecting equities, bonds, and investment products.
 - Developed predictive analytics models with XGBoost and LSTM networks in Azure Machine Learning, correlating sentiment patterns with short-term stock price movements, improving market trend forecasting accuracy and supporting proactive investment decision-making.
 - Designed and deployed an interactive Power BI dashboard to visualize sentiment scores, event impact heatmaps, and stock correlation insights, delivering real-time intelligence to financial advisors and portfolio managers through automated data refreshes.
 - Partnered with cross-functional stakeholders in an Agile environment using Jira and Confluence, translating analytical outcomes into actionable insights that refined portfolio strategies, improved risk assessment, and enhanced client-facing advisory services.

- Data Analyst, Standard Chartered Bank**01/2022 – 08/2023 | Chennai, India
- Contributed to the Fraud Detection & Financial Crime Prevention with AI project by supporting requirement gathering sessions with compliance teams, documenting fraud detection KPIs, and assisting in designing scalable data pipelines using AWS S3, SQL, and Azure Data Factory.
 - Consolidated global transaction datasets across multiple regions, applying Python (Pandas, NumPy) and PySpark for data cleaning, transformation, and deduplication, ensuring standardized inputs for AI models and compliance with AML and KYC regulations.
 - Implemented anomaly detection using Isolation Forests and Autoencoders in Azure Machine Learning, identifying suspicious transaction behaviors, reducing false positives, and strengthening Anti-Money Laundering (AML) alerting systems across cross-border transactions.
 - Built predictive fraud detection models with XGBoost and Random Forest, incorporating SMOTE and ensemble techniques for imbalanced datasets, improving fraud identification accuracy while minimizing disruptions to legitimate banking activities.
 - Designed and deployed interactive Tableau dashboards to visualize suspicious activity trends, customer risk scores, and geographic fraud heatmaps, integrating automated refresh pipelines with AWS Glue for real-time monitoring of fraud cases.
 - Explored graph-based techniques for transaction network analysis to evaluate hidden fraud rings, collaborating with compliance officers and security teams in an Agile environment (Jira, Confluence), delivering insights that improved FCC reporting and reduced financial crime exposure.

Education

Master of Science in Computer Science	08/2023 – 05/2025
University of North Texas	Denton, Texas, USA
Bachelor of Technology in Computer Science	08/2019 – 05/2023
Vel Tech University	Chennai, India
