EDUCATION

Rutgers University

Master of Science in Computer Engineering

Bachelor of Science in Computer Engineering

New Brunswick, NJ

May 2024

May 2021

WORK EXPERIENCE

Amazon

Fulfillment Center Returns Processor

September 2025 – Present

Avenel, NJ

- Ensured accuracy in data entry and documentation while maintaining productivity in a metrics-driven environment.
- Solved computer hardware and workstation software issues to minimize downtime and keep workflows on track.
- Adapted quickly to new tools and system updates in a fast-paced, high-volume environment.

Outlier (Scale AI)

Freelance Software Developer and AI Data Annotator

September 2024 – Present

Edison, NJ (Remote)

- Revised generated code from Large Language Models (LLMs) for different models with Reinforcement Learning from Human Feedback (RLHF) to align with instructions based on the needs of the client.
- Improved the quality of other contributors' work by modifying prompts, conversations, and metrics to ensure the task aligned with client standards.

Fidelity Investments

Associate Software Engineer

January 2022 – June 2023

Smithfield, RI (Remote)

- Refactored and maintained responsive web applications using modular, reusable components in React to enhance the user experience for more than 850 clients.
- Optimized back-end features for data retrieval and display using Java, Oracle SQL, and RESTful APIs with Spring Boot, improving the speed of data processing in some apps by 20 percent.
- Debugged API endpoint issues using test suites like Postman and Insomnia, collaborating closely with various teams to resolve at least 10 issues and tickets per sprint.
- Monitored API health and application performance using Splunk and Datadog, identifying and reducing the amount of service disruptions by 20 percent.
- Managed continuous deployment processes with Jenkins Pipelines, AWS CodeDeploy and AWS CodeBuild to deploy Maven project builds and Docker files.

PROJECTS

Yosh, A Full Stack Language Learning Web Application

- Designed a responsive user interface using React and TypeScript to help users learn the basics of the Japanese language.
- Managed back-end data using Drizzle ORM and PostgreSQL with NeonDB, enabling tracking of user progress, lesson data, and vocabulary databases.
- Implemented Clerk with OAuth providers such as Google and GitHub for simple and secure authentication.

Stock Price Prediction Simulator via Time Series Analysis

- Developed a full-stack web application using Python and Django that enables users to simulate investment trading in the stock market.
- Obtained predictions for closing prices of stocks from the Yahoo Finance API through time series analysis with machine learning models such as LightGBM and the LSTM.
- Implemented dynamic chart displays for users to visualize stock prices and predicted trends, facilitating informed decision-making in trading activities.

SKILLS

Programming Languages: HTML, CSS, Java, Python, TypeScript, JavaScript, SQL, C++

Frameworks: React, Node, Tailwind CSS, Spring Boot, NextJS, Angular, Django, Flask

DevOps: Git Version Control, Jenkins, Bitbucket, AWS CodeDeploy, AWS CodeBuild

Data Observability and Testing: Splunk, Datadog, Insomnia, Postman

Project Management: Jira, ServiceNow, Artifactory, Maven
