

EXPERIENCE

- **Jack's Holding and Consulting Company, LLC** Seattle, WA, United States
Software and AI Engineer, Consultant *April 2025 – Present*
 - Developed an API to process project-related emails, summarize them using a Dockerized IBM Granite AI instance (via OpenAI API), and file summaries into Jira Service Management. Client productionized the solution in Kubernetes, achieving a 30% reduction in Jira ticket triage time.
 - Built an API-driven tool that automatically generates employment verification letters, reducing manual HR workload for Cayman's electricity provider by improving letter generation time from 10 minutes to a few seconds.
- **Atlassian** Seattle, WA, United States
Software Engineer *Jun 2022 – Sep 2022; Sep 2023 – Apr 2025*
 - Drove implementation of the multi-org domain claim (MODC) feature in Atlassian Guard, contributing to RESTful API design and delivering the feature through hands-on development, cross-team collaboration, and ownership across the full software development life cycle; including unit, integration, and manual tests along with production support. Adopted by 325 organizations including Ford, Disney, and DHL, the feature enabled 157 new multi-org domains and 42,000 additional accounts to be managed within two weeks, generating \$128K in monthly revenue.
 - Led an initiative to automate a time-consuming manual data transfer process required to compile our team's weekly software reliability report. The automation reduced the time to compile this report from 2 hours to a few seconds, freeing up a significant portion of on-call time and inspiring similar projects in our sister teams.
 - Implemented a Redis caching strategy to scale a service for syncing user account permissions across Atlassian products, reducing data retrieval latency by 25%. The cache served 98% of requests, reducing database load.
- **Amazon** Luxembourg City, Luxembourg
Software Engineer, Intern *Jun 2021 – Oct 2021*
 - Developed an application leveraging Amazon SQS, AWS Lambda, and CloudWatch to improve reliability in distributed microservices architecture by automating message redrives between primary queues and dead-letter queues. Implemented service-to-service communication protocols, infrastructure-as-code monitoring, and logging to detect and recover failed events, reducing resolution time for customer data correctness queries.
- **IT Innovation Centre, University of Southampton** Southampton, United Kingdom
Machine Learning Engineer, Research Assistant *Feb 2021 – Jun 2021*
 - Engineered an end-to-end ML pipeline for COPD exacerbation prediction, transitioning a model from proof-of-concept notebooks to a production-ready containerized web application with separate backend and frontend services. Developed API-based communication for real-time inference and an intuitive clinician interface, contributing to a European Commission presentation that secured \$70,000 in research funding.
- **Cayman Islands Monetary Authority** Grand Cayman, Cayman Islands
Analytics Engineer, Intern *Jul 2020 – Sep 2020*
 - Reverse-engineered legacy Excel-SQL Server workflows and built an automated web application replacing manual report compilation with dynamic visualizations and document generation. Presented to senior leadership including division heads, demonstrating automation capabilities that justified organizational investment in 5 additional data science positions.

EDUCATION

- **University of Southampton** Southampton, United Kingdom
MSc Computer Science *Sep 2022 – Sep 2023*
 - Grade: Distinction (3.92/4.00 GPA). Recognized as the top student in the postgraduate computer science cohort.
 - Published research on privacy-preserving artificial intelligence at the ACM World Wide Web Conference 2024.
- *BSc Mathematics with Computer Science* *Sep 2019 – Jun 2022*
 - Grade: First Class Honours (3.70/4.00 GPA)

SKILLS

- **Languages:** Java, C#, Python, SQL, JavaScript, TypeScript
- **Technologies and Methodologies:** Spring Boot, .NET, Flask, NodeJS, Vue.js, PostgreSQL, SQL Server, Amazon Web Services, Microsoft Azure, Docker, Kafka, Git, GitHub, Linux CLI, Jira, Confluence, Agile
