PROFILE

Experienced PhD Chemical Engineer with drug Delivery research experience in a lab setting and 8+ years of expertise in designing and optimizing drilling and workover programs for onshore and offshore operations. Skilled in collaborating with cross-functional teams to improve operational efficiency, reduce costs, and optimize well performance. Proven track record of successfully planning and executing complex drilling projects, coupled with a strong ability to negotiate contracts and manage vendor relationships. Proficient in conducting technical analyses, providing engineering support, and ensuring compliance with regulatory standards. Adept at utilizing strong communication and project management skills to drive successful project outcomes, with a solid foundation in chemical engineering practices and techniques for the oil and gas industry.

EMPLOYMENT HISTORY

Lead Drilling Engineer, Simples Oil International, LLC

Nov 2017 — Jul 2021

- Designed and implemented workover programs and monitored the performance of the programs to identify potential areas for improvements
- Responsible to report Drilling and workover operations to Railroad Commission of Texas
- Planned and designed workover procedures for East Texas Operations, simultaneously responsible to coordinate with field personnel
- Collaborated with drilling team to improve drilling operations' efficiency and reduce expenses
- Optimized best practices for old oil and gas wells
- Coordinated drilling and workover operations for East TX onshore
- Produced detailed operations cost estimates and conducted field tests
- Negotiated contracts and services with Oil and Gas service providers
- Collaborates during Service Party Tendering Process
- Supported daily engineering ongoing operations through communication with onsite supervisor and superintends
- Monitored KPIs and provided meaningful input in quarterly, contractor business reviews
- Established and ensured meaningful working relationships with contractors and regulatory personnel
- Contributed to technical QC and HSSE process throughout the drilling/workover phase
- Analyzed technical data for projects and provided input on improvement
- Assisted with studies aimed at determining feasibility of future long-term projects

Lead Drilling Engineer, EXXONMOBIL

Jan 2013 — Aug 2015

- Designed, executed and optimized horizontal wells
- Responsible for planning and writing Drilling Programs for deepwater High complex wells, ERD wells, and wells that require MPD for a successful Drilling
- Provided direction to major engineering projects and technical services that require unusual analysis and solution

Writing Skills

LANGUAGES

English

Portuguese

Spanish

- Responsible for monitoring/analyzing the equipment readiness and support offshore personnel to make sure successful operations are achieved
- Ran technical meetings and project reviews for engineering team
- Monitored daily drilling operations and provided technical support and engineering support to Drilling operations
- Maintained detailed drilling procedures in conjunction with field personnel to enhance performance
- Analyzed and optimized ways reduce cost and increase drilling efficiency
- Worked closely with service providers companies making sure equipment, personnel and procedures were in place

Drilling Engineer, EXXONMOBIL

Jun 2011 — Jan 2013

- Rig Engineer (Surveillance Engineer)
- Rotated offshore
- Completed all routine daily Drilling and Cost Reports using WellView
- Monitored drilling plans, programs, and work progress
- Participated, contributed to risk identifications and mitigations efforts
- Monitored drilling parameters and responsible for reporting in WellView
- Evaluated Fast Drill Process where applicable
- Provide technical reports/presentations for upper management
- Prepared site plans, casing tallies, and Cement calculations
- Inventory control for all equipment/materials supplies to ensure smooth ongoing operations
- Captured and share learnings on an ongoing basis
- Assisted office engineers and other personnel to make sure operations were conducted according to the plan

EDUCATION

Doctor of Philosophy, Missouri University of Science and Technology

Dec 2023

Doctoral Dissertation: Design and Development of Biocompatible MOFS and Silica Based Nanocarriers with Controlled Pharmacokinetics for Drug Delivery Application

Published Papers

- Drug Delivery on Mg-MOF-74: The Effect of Drug Solubility on Pharmacokinetics
- Performance of MIL-101(Cr) and MIL-101(Cr)-Pore Expanded as Drug Carriers for Ibuprofen and 5-Fluorouracil Delivery

Characterization

XRD, SEM, BET, FTIR

Drug Delivery - Drug Release Kinetics - HPLC

Master of Science in Chemical Engineering, Missouri University of Science and Technology

Dec 2017

Bachelor of Engineering in Chemical Engineering, Tshwane University of technology

May 2011

Process Engineer - intern, Total - Luanda Refinery

Jan 2010 — May 2010

- Monitored and optimized the performance of various process equipment and systems, such as distillation columns, heat exchangers, reactors, and control systems, to ensure efficient and safe operation.
- Maintaining detailed process documentation, including standard operating procedures, process flow diagrams, and process safety information.
- Providing technical support to plant operators and maintenance personnel to ensure the smooth and safe operation of the facility.
- Participated in plant safety initiatives, such as risk assessments, hazard and operability studies (HAZOP), and incident investigations.
- Design small cap projects up to \$500K involving fluid systems & heat exchange and PSM.
- Assist maintenance in resolving equipment malfunctions, troubleshoot process problems, organize and implement preventative maintenance procedures.
- Work closely with operation personnel in the safe operation of the oil refinery.
- Determine most effective arrangement of operations such as mixing, crushing, heat transfer, distillation, and drying.
- Conducted root cause analysis to identify and resolve process-related issues, resulting in improved process efficiency and cost savings
- Developed process models and simulations to predict process performance and identify potential bottlenecks
- Staying up-to-date with industry best practices, regulations, and technological advancements in the oil and gas sector.
