Technical Skills

Languages: Python, Java, C, JavaScript, TypeScript, HTML5/CSS, SQL.
Frameworks and Libraries: VAngular, React.js, Flask, Bootstrap, Pandas, NumPy, Matplotlib, BeautifulSoup.
Databases: MongoDB, Oracle SQL
Tools and Platforms: GitHub, VS Code, Jupyter Notebook, IntelliJ, Linux.

Experience

IQVIA (Software Engineer | Bangalore, India)

Jul 2022 – Dec 2023

- Engineered automation scripts using Python and SQL, streamlining Argus safety database monitoring and reducing manual workload by 40%.
- Partnered with cross-functional teams to gather system enhancement requirements and implemented custom configurations, boosting performance and usability.
- Architected and deployed robust upgrade testing frameworks for Argus applications, ensuring smooth version transitions with zero critical failures.
- Diagnosed and resolved over 25 complex support tickets, improving system uptime and user experience through efficient backend debugging.

Capgemini (Sr. Analyst Intern | Mumbai, India)

Feb 2022 – Jun 2022

- Developed tailored configuration and customization solutions for Oracle E-Business Suite modules, aligning with evolving business needs.
- Coordinated with engineering teams to design and document scalable backend workflows for enterprise automation.
- Optimized data retrieval by crafting high-efficiency SQL queries and PL/SQL procedures, improving performance by up to 35% in high-load systems.

Blackbuck (Data Science Intern | Bangalore, India)

May 2021 – Sep 2021

- Constructed and deployed scalable data preprocessing pipelines in Python for over 100,000 records, improving training data quality and reducing noise by 20%.
- Authored Python scripts for data extraction, transformation, and analysis using Pandas and NumPy to derive actionable insights.
- Collaborated with ML engineers to integrate cleaned datasets into predictive models, enhancing delivery time prediction accuracy.

Education

Arizona State University

Jan 2024 – Dec 2025

Major: Master of Science in Computer Software Engineering

Arizona, USA

Shiv Nadar University

Jul 2018 – May 2022

Major: Bachelor of Technology in Computer Science Engineering

Greater Noida, India

Minor: Economics

Projects

Fake Content Detection System | React, Flask, MongoDB, REST

Jan 2025 – Apr 2025

- Developed a multi-modal fake content detection web application that analyzes both text and image inputs using deep learning models to identify misinformation in social media content.
- Integrated a BERT-based NLP pipeline for textual analysis and integrated a Vision Transformer (ViT) model for image-based classification. Achieved high accuracy in distinguishing misleading content.
- Designed a user-friendly React frontend with visual feedback and integrated Google Fact Check API for real-time fact verification.
- Built a feedback loop storing user reports in MongoDB to support adaptive retraining and continual system improvement.

Food Recommender System | Python, MongoDB, Angular, HTML, SCSS, Typescript

Jan 2021 – May 2021

- Developed a personalized food recommender system using Angular and TypeScript, featuring a dynamic UI and navigation across welcome, order, and footer modules.
- Integrated advanced data analysis, machine learning, and collaborative filtering algorithms using Python, to deliver tailor-made recommendations based on users' unique calorie intake and preferred cuisines, significantly enhancing user satisfaction and engagement by 25%.
