

Name: Nivas Pannala
Email: pannalanivas025@gmail.com
LinkedIn: [Nivas Pannala](#)

Ph No: (347) 951-9221

PROFESSIONAL EXPERIENCE:

- Around 5+ years of professional experience as a Business Data Analyst with good experience and understanding, scale data and analytics solutions on multiple different databases, including data collection, cleaning, visualization, manipulation, and interpretation.
- Expertise in data analysis, including data profiling, data mapping, and data validation, to ensure data integrity and accuracy.
- Experience in data analysis, data visualization using Tableau / Microsoft Power BI, Visio model building with machine learning algorithms for prediction and forecasting using data, using statistical tools like SAS and R, data mining using Python, SQL, Hadoop, Spark, Hive, etc.
- Experience in Data Extraction/Transformation/Loading (ETL), Data Conversion, and Data Migration using Microsoft SQL Server Integration Services (SSIS) and Informatica.
- Experienced in conducting User Acceptance Testing (UAT) and supporting end-users in adopting new systems and processes.
- Developed use cases and user stories that capture functional and non-functional requirements.
- Experience in performing Gap analysis, root cause analysis, risk analysis, and impact analysis to define boundaries, identify issues, minimize costs, and optimize solutions.
- Employed various JAD techniques, such as brainstorming, prototyping, and group discussions, to foster collaboration and promote a shared understanding of business goals and data needs.
- Experienced in conducting sprint planning sessions and backlog grooming activities using Jira.
- Proficient in creating various documentation deliverables such as Business Requirements Documents (BRDs) and Functional Requirements Documents (FRDs).
- Strong knowledge of insurance regulations and compliance requirements specific to the P&C Insurance domain, ensuring adherence to legal and industry standards.
- Skilled in utilizing SDLC, Agile, and Waterfall methodologies, such as Scrum project tasks, to facilitate iterative development and ensure timely delivery.
- Proficient in utilizing Microsoft Visio for creating and modifying diagrams, flowcharts, organizational charts, and other visual representations.
- Worked with Project Managers to prioritize data analysis tasks based on business needs and project timelines, ensuring that critical analyses were completed on time.
- Experience in designing SQL queries using joins, sub-queries, functions, indexes, views, materialized views, set operators, group by, and OLAP functions.
- Extensive experience using EHR, EMR, and HL7, Medicaid/Medicare Claims in the healthcare industry to extract, clean, and analyze data from primary and secondary sources.
- Created databases, schemas, and tables using Snowflake schema and migrated multistate-level data from SQL Server to Snowflake.
- Maintained knowledge in designing star schema and snowflake schema for data modeling and created user stories using the Jira tool.
- Solid experience in creating cloud-based solutions using Amazon Web Services (AWS), Amazon RDS, and Microsoft Azure.
- Worked closely with the Project Manager to identify data-related dependencies and constraints, ensuring seamless integration of data analysis tasks within the Waterfall framework.
- Worked on complex ad-hoc SQL queries using joins, DML, DDL, pivots, views, constraints, and functions using Oracle, MS SQL Server, and MySQL.
- Experienced in working with JIRA software, including creating and managing projects, workflows, custom fields, dashboards, and reports.
- Extensive experience with Informatica PowerCenter and Power Exchange for designing, developing, and maintaining ETL workflows for data integration and migration between various data sources and targets.
- Advanced working knowledge of MS Project, MS Word, MS Excel, MS Visio, and MS PowerPoint to create test plans and timeframes for deliverables.
- Prepared and distributed JAD session agendas, meeting materials, and follow-up documentation to ensure all stakeholders were well-informed and engaged throughout the project lifecycle.

TECHNICAL SKILLS:

Programming Languages, IDE	Python, R, SQL, Snowflake, Visual Studio Code
Data Science	RStudio, Machine Learning, Databricks, Data warehousing, Data modeling, Data mining

Packages	NumPy, Pandas, Matplotlib, SciPy, Seaborn, ggplot2, plotly, Spark, Selenium
Visualization Tools	Tableau, Power BI, Excel, Cognos
Cloud Technology/ Databases	AWS, Azure, Snowflake, GCP, (Azure Data Lake, Amazon Redshift, Amazon S3 Storage)
Database Management	MySQL, Microsoft SQL Server, MS Excel, MS Access
Methodologies	SDLC, Agile, Waterfall, Scrum
Other Skills	A/B Testing, Selenium Automation Testing, Data Cleaning, Data Wrangling, Data Transformation, Trading, Critical Thinking, Communication Skills, Presentation Skills, Jira, AWS, Azure, CRM, ETL, MS PowerPoint

PROFESSIONAL EXPERIENCE:

Client: Board of Public Utilities, Kansas City, KS

Nov 2024 – Till Date

Role: Data Analyst/ Business Analyst

Responsibilities

- Used Agile Methodology and SCRUM Process. Designed high-level and low-level technical design documents for the project. Worked with the Business teams to gather requirements and develop accordingly, to reconcile the transactions. Familiar with JSON-based systems and Amazon Web Services (AWS).
- Tracked and communicated Agile metrics including team velocity, sprint progress, and Program Increment (PI) within Scaled Agile (SAFe) framework.
- Analyzed and reviewed user requirement documents and prepared a test plan.
- Prepared preconditioned data for testing the application, executed test cases, and analyzed the results.
- Provided management with test metrics, reports, and schedules; participated in design walkthroughs and meetings.
- Developed Match Rules to reconcile day-to-day transactions. Migrated data from One Lake to Snowflake. Created metadata, business datasets, and technical datasets in Nebula.
- Created STTM documents for migrating data from Redshift to Snowflake, including data mapping and building a data dictionary.
- Used Clearwater application for daily audit-quality data to fast-track the book process.
- Worked on platforms like Snowflake, accessing data from data repositories. Monitored data transformation and migration applications using real-time tools like PagerDuty and registered AWS SNS notifications.
- Collaborated with Product Owners and end users (Consumers) to deliver solutions in a highly collaborative Agile environment.
- Utilized enterprise data migration tools with technologies such as AWS (EC2, EMR, S3). Collaborated with Software Engineers, Data Scientists, and Machine Learning Engineers using the Scrum process to meet sprint goals and complete Epics.
- Prepared and interpreted financial statements as per business needs.
- Assisted in client meeting presentations and provided insights to senior management on topics like risk mitigation, capital markets, and economic commentary.
- Used SQL to extract data from Oracle ERP databases and perform data analysis.
- Used Pandas API to manipulate time series and tabular data formats for analysis and retrieval.
- Collected data and analyzed detailed financial valuation reports.
- Created financial valuation reports with market price evaluations and resolved pricing discrepancies.
- Built dashboards and monitored data loads in Kibana. Proficient in writing complex SQL queries; worked with Teradata, Oracle, MS Access, and SQL Server.
- Automated deployment to environments such as DEV, QA, and UAT/STAGING. Hands-on experience in AWS cloud administration: EC2, S3, Auto Scaling, and ELB.
- Built business decision-making graphs using Python Matplotlib. Wrote and executed MySQL queries using Python-MySQL Connector.

Environment: Snowflake, Teradata, Teradata SQL Assistant, Python, Databricks, SQL Workbench, JSON, MS Excel Macros, Oracle ERP, Kibana, AWS, AWS EC2, AWS S3, SQL, Tableau, Unix, Teradata, GitHub, Devex, G-Suite, Jira, API, ServiceNow, Nebula, Cerebra, Splunk, One lake control plane.

Client: Arkansas Blue Cross Blue Shield, Little Rock, AR

Oct 2023 – Oct 2024

Role: Data Analyst

Responsibilities:

- Translated and simplified complex technical requirements for better understanding and effective communication using Jira for project tracking.
- Ensured maximum productivity and cost efficiency of production jobs by reviewing output results manually and systematically.
- Formulated and implemented corrective solutions into data control procedures using SQL and Python.

- Reviewed production schedules and incorporated user-required modifications into existing control measures.
- Utilized Agile methodologies for project management and adapted control measures based on Agile principles.
- Developed and maintained documentation procedures for all controls, including pre-auditing invoice data, client submissions, and year-to-date (YTD) recording using MS Excel and SQL Server.
- Collected data from internal systems and supplier sources, validating it using Python (Pandas) and SQL to ensure data integrity.
- Resolved data inconsistencies from internal and external sources using Python and tools like Power BI for data analysis and visualization.
- Assisted in preparing supply market research to identify trends, using Tableau and Alteryx for data analytics.
- Performed market analysis using Python (NumPy, Matplotlib) and R (ggplot2) to visualize data and extract industry insights.
- Analyzed commodity pricing to identify cost-saving opportunities using Python and R.
- Employed SAS for advanced analytics, balancing data analysis with category relevance.
- Used SQL to manipulate and analyze large datasets, supporting data-driven conclusions.
- Collaborated with cross-functional teams for effective project execution, utilizing Jira for tracking and task progress.
- Used Visual Studio Code for development across Windows and Linux environments.
- Performed data analysis and created visualizations with Power BI to support business decision-making.
- Optimized database performance via indexing, partitioning, and query optimization.
- Developed ETL processes using Informatica, Talend, Alteryx, SSIS, Apache NiFi, Airflow, and AWS Glue.
- Integrated data from sources including APIs, web scraping, CRM systems, ERPs, and cloud platforms for industry-specific needs.
- Implemented data security measures and ensured compliance with domain-specific regulations.
- Conducted regular audits and implemented role-based access controls for data protection.
- Participated in Agile and Scrum methodologies for iterative development and continuous improvement.
- Used project management tools such as Jira, Asana, Trello, and Microsoft Project.
- Developed cloud-based data solutions using AWS (Redshift, S3, Athena), Azure (Synapse, Blob Storage), and Google Cloud Platform (BigQuery, Dataflow).
- Implemented big data technologies such as Hadoop, Spark, Kafka, Hive, and HBase for large-scale analytics.

Environment: Jira, SQL, Python (Pandas, NumPy, Matplotlib), SAS, Agile, MS Excel, SQL Server, Power BI, Tableau, Alteryx, R (ggplot2), Visual Studio Code, Windows, Linux.

Client: NebuLogic IT Solutions, Hyderabad, India

Jan 2023 – Aug 2023

Role: Data Analyst/Business Analyst

Responsibilities:

- Leveraged SQL Server, MySQL, and NoSQL databases (MongoDB, Cassandra) to manage and analyze transaction data for identifying fraud patterns.
- Played a key role in enterprise architecture projects, designing scalable solutions to align IT systems with long-term business strategies.
- Engineered and managed data warehouses utilizing Amazon Redshift, Google BigQuery, and Snowflake to facilitate efficient storage and retrieval of extensive datasets.
- Implemented ETL processes with Informatica, Talend, and Apache NiFi to enable seamless data integration from various sources into fraud detection systems.
- Developed real-time data pipelines using Apache Kafka to ensure timely processing of transaction data for immediate fraud detection.
- Utilized Apache Spark and Hadoop (HDFS, Hive) for large-scale data processing and advanced analytics of fraud-related data.
- Constructed interactive dashboards in Tableau, Power BI, and Looker to visualize key fraud detection metrics and provide actionable insights to stakeholders.
- Applied machine learning algorithms with Python libraries (Scikit-learn, TensorFlow, Pandas) to build predictive models for detecting fraudulent behavior.
- Collaborated with cross-functional teams (developers, QA, compliance) to integrate fraud detection solutions and ensure adherence to security protocols.
- Executed A/B testing to evaluate the effectiveness of fraud detection features, iterating on algorithms based on empirical results.
- Ensured compliance with GDPR and HIPAA regulations through effective data governance practices and security measures.
- Engaged in vendor management by articulating technical requirements and coordinating with external teams, ensuring successful project delivery.

- Supported Agile methodologies, facilitating daily stand-ups, sprint planning, and retrospectives to manage timelines and track progress using Jira and MS Project.
- Utilized JIRA and Confluence for Agile project management, tracking project requirements, user stories, and team progress in fraud detection initiatives.
- Managed version control with Git to handle changes in SQL scripts, Python code, and machine learning models for fraud analysis.
- Deployed cloud-based solutions using AWS (S3, EC2) and Azure for scalable fraud detection systems, managing infrastructure for optimal performance.
- Utilized security information and event management (SIEM) tools like Splunk for real-time monitoring of security events related to fraudulent activities.

Environment: Power BI, Pandas, Mock-up screens, Numpy, Python, Machine learning, HTML, XML, Agile-Scrum, AWS Lambda, .Net (VB.NET, ASP.NET), MS Visio, AWS, SQL Server, MS Office suite, CSV, JSON, XML, GIS, MS Project Professional, JIRA.

Client: Manhar Solutions, Hyderabad, India

April 2020 – Dec 2022

Role: Business Analyst

Responsibilities:

- Gathered requirements using elicitation techniques such as Document Analysis, Brainstorming, Interviewing, and conducting JAD sessions with designers, developers, business users, and SMEs.
- Conducted meetings and brainstorming sessions with end users and SMEs and documented them using Requisite Pro (Rational's documentation tool).
- Performed data mapping, logical data modeling, created class diagrams and ER diagrams, and used SQL queries to filter data in the Oracle database.
- Demonstrated expertise in writing complex SQL queries and stored procedures to manipulate relational databases and support data analysis.
- Applied statistical analysis techniques to evaluate data trends and improve model accuracy, enhancing operational performance.
- Used SSIS to facilitate data movement between platforms, ensuring data integration and consistency.
- Established quality control measures and documented processes to maintain data accuracy and reporting consistency.
- Designed and implemented Health Data Analytics Dashboards using Tableau, Power BI, and QlikView, visualizing patient outcomes and healthcare trends.
- Developed complex SQL queries in MySQL, PostgreSQL, and SQL Server to extract and analyze healthcare data for reporting.
- Integrated multi-source health data using ETL tools like Informatica, Talend, and SSIS, ensuring smooth flow into data warehouses.
- Leveraged cloud platforms such as AWS (Redshift, S3) and Google Cloud (BigQuery) for scalable data storage and healthcare data analysis.
- Performed advanced data analysis and predictive modeling using Python (Pandas, NumPy), R, SAS, and SPSS, identifying trends and forecasting patient demand.
- Implemented big data solutions using Hadoop (HDFS, Hive) and Apache Spark for efficient processing of large-scale healthcare data.
- Ensured data quality and HIPAA compliance using tools like Talend Data Quality and Alation, maintaining data integrity.
- Monitored real-time healthcare data streams using Apache Kafka for continuous integration from medical devices and health systems.
- Collaborated with cross-functional teams and facilitated Agile project management using JIRA and Confluence, delivering analytics solutions aligned with clinical needs.
- Developed custom visualizations and dashboards using D3.js and Google Analytics, tracking patient behavior and optimizing healthcare services.

Environment: Waterfall Methodology - (HTML/CSS, Java, Oracle), Gap Analysis, MS Project, MS Visio, MS Office Suite, Requisite Pro, SharePoint, Tableau, Web Services, API, Microservices, AJAX, SOAP API, RESTful Services.

EDUCATION:

Masters in Computer Science at Montclair state university

BTech in Computer Science and Engineering, at JNTUH, India.
