

Pavan
Sr. Java Full Stack Developer
pavanakpy@gmail.com | +1 (302) 408 3939

PROFESSIONAL SUMMARY:

- Senior Java Full Stack Developer with 10+ years of experience designing, developing, and deploying scalable, high-performance enterprise applications.
- Expert in building modular microservices using Spring Boot and Node.js, with robust RESTful and GraphQL APIs for seamless integration across distributed systems.
- Skilled in cloud-native application development on AWS and Azure, leveraging EC2, Lambda, S3, RDS, DynamoDB, EKS, and App Services for high availability and fault tolerance.
- Proficient in containerization and orchestration using Docker and Kubernetes, implementing rolling updates, blue-green deployments, and zero-downtime releases.
- Strong front-end development experience using React, Redux, Angular, Material UI, HTML5, CSS3, SASS, and JSP/JSTL, delivering responsive, interactive, and user-friendly interfaces.
- Experienced in database design and management, including PostgreSQL, MySQL, DynamoDB, Amazon Document DB, and ETL workflows for relational and NoSQL systems.
- Adept in CI/CD pipeline implementation and build automation with Jenkins, Gradle, Maven, Apache ANT, and Azure DevOps, reducing deployment cycles and enhancing release reliability.
- Skilled in event-driven architectures and messaging systems using Kafka, RabbitMQ, and JMS, improving real-time processing and system responsiveness.
- Strong focus on security and API authorization, implementing JWT and OAuth 2.0 authentication to safeguard enterprise applications.
- Hands-on experience with monitoring, logging, and performance optimization, leveraging ELK Stack, CloudWatch, and Log4j for proactive issue detection and resolution.
- Committed to Agile Scrum methodologies, contributing to sprint planning, backlog grooming, retrospectives, and collaborative problem-solving.
- Mentored and guided junior developers, conducted code reviews, and promoted best practices, enhancing overall team productivity and code quality.
- Excellent communication and collaboration skills, adept at translating complex technical requirements into scalable solutions aligned with business goals.
- Strong problem-solving and analytical mindset, consistently delivering innovative solutions to optimize performance, reduce costs, and improve system reliability.

TECHNICAL SKILLS:

Programming Languages & Core Technologies:	Java, J2EE, Spring Framework, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Batch, Hibernate ORM, JDBC, Struts, Enterprise JavaBeans (EJB), Node.js, TypeScript, JavaScript
Frontend Frameworks & Libraries:	React, Redux, Angular, Material UI, JSP/JSTL, jQuery, HTML5, CSS3, SASS, AJAX
Web Services & APIs:	RESTful APIs, SOAP Web Services, GraphQL APIs, JSON, Swagger (OpenAPI), JWT Authentication, OAuth 2.0
Cloud Platforms & Services:	AWS EC2, Lambda, S3, RDS/PostgreSQL, DynamoDB, Elastic Beanstalk, EKS, ELB, API Gateway, CloudFormation, CloudWatch, SQS, Azure App Services, Azure Storage, Azure Data Factory
Containerization & Orchestration:	Docker, Kubernetes (EKS), Blue-Green Deployment, Rolling Updates, Containerized Microservices
CI/CD & Build Tools:	Jenkins, Gradle, Maven, Apache ANT, Azure DevOps, CI/CD Pipeline Automation
Databases & Data Management:	MySQL, Amazon DocumentDB (MongoDB-compatible), SQL, Stored Procedures, ETL Workflows
Messaging & Event-Driven Systems:	Kafka, RabbitMQ, Java Message Service (JMS)
Testing & QA:	JUnit, Cucumber, Selenium, Jest, Mockito, Test-Driven Development (TDD), Unit & Integration Testing
Monitoring, Logging & Performance Tools:	ELK Stack (Elasticsearch, Logstash, Kibana), Log4j, Structured Logging, Application Performance Monitoring
DevOps & Infrastructure Automation:	Ansible, Infrastructure-as-Code (IaC), Hybrid Cloud/On-Premises Automation

Version Control & Collaboration:	Git, GitHub, Bitbucket, Branching Strategies, Pull Requests, Peer Code Reviews
Software Development Practices:	Agile Scrum, Sprint Planning, Retrospectives, Backlog Grooming, Dependency Injection (DI), Inversion of Control (IoC), Aspect-Oriented Programming (AOP), Modular Architecture, Microservices

EXPERIENCE:

Capital One, Bethesda, MD

March 2023 – Present

Senior Java Full Stack Developer

Responsibilities:

- Built modular Spring Boot microservices integrated with Kafka-based event-driven pipelines, improving real-time workflows and system scalability.
- Developed and deployed RESTful APIs with Spring Boot to enable seamless communication between React front-end applications and backend services.
- Deployed and managed cloud-native applications on AWS EC2, leveraging Auto Scaling and Elastic Load Balancing to ensure high availability, scalability, and system resilience.
- Applied programmatic and declarative transaction management in Spring to ensure data consistency across distributed applications.
- Implemented Hibernate ORM for complex entity mapping and reliable CRUD operations in transactional systems.
- Developed AWS Lambda functions processing ~10K records per hour, reduced compute costs by ~95% compared to EC2-based jobs.
- Automated provisioning of AWS resources with CloudFormation, ensuring repeatable deployments and minimizing manual errors.
- Managed PostgreSQL and DynamoDB databases, balancing scalability, performance, and cost efficiency.
- Leveraged Spring Batch for asynchronous processing, job scheduling, and handling high-volume batch workloads.
- Built responsive and dynamic front-end applications using React, Redux, HTML5, and CSS3 to enhance user experience.
- Applied Redux for efficient state management, reducing unnecessary API calls, and improving UI responsiveness.
- Ensured API interoperability with standardized JSON-based REST integrations.
- Automated hybrid cloud and on-premises server setups with Ansible, maintaining consistent infrastructure configurations.
- Monitored and analyzed system performance with the ELK stack (Elasticsearch, Logstash, Kibana) for real-time insights and troubleshooting.
- Deployed containerized services on Kubernetes (AWS EKS) for horizontal scaling and reduced downtime by 60% during peak traffic.
- Strengthened application security using Spring Security with RBAC (role-based access control) for API authorization.
- Authored and maintained Swagger-based API documentation, accelerating onboarding and third-party integrations.
- Designed and executed CI/CD pipelines in Jenkins, achieving a 40% reduction in release cycles and a 99% deployment success rate.
- Built Gradle-based build automation processes, streamlining packaging and deployment workflows.
- Integrated automated testing into CI/CD pipelines to ensure quality checkpoints before production releases.
- Performed comprehensive unit and integration testing with JUnit and Cucumber, and achieved high test coverage, minimizing regression risks.
- Leveraged Agile methodologies, actively participating in sprint planning, retrospectives, and daily stand-ups.
- Tracked development progress and sprint commitments using JIRA, and ensured timely delivery of tasks.
- Established structured logging and monitoring practices to detect and address production issues proactively.
- Managed Git repositories, including branching strategies, pull requests, and peer reviews, ensuring code quality.
- Provided technical guidance, mentoring, and code reviews for junior developers, improving team engineering practices.
- Partnered with product owners and business analysts to translate requirements into scalable, high-performing technical solutions.
- Delivered secure, scalable, and customer-focused full-stack applications supporting enterprise business operations.

Environment: Java, Spring Boot, Spring Batch, Spring Security, Hibernate ORM, REST, Kafka, React, Redux, HTML5, CSS3, AWS (EC2, Lambda, S3, EKS, ELB, CloudFormation, DynamoDB, RDS/PostgreSQL), Kubernetes, Jenkins, Gradle, Ansible, ELK Stack, Swagger, JUnit, Cucumber, Git, JIRA.

Kroger Technology & Digital, Cincinnati, OH

October 2021 – February 2023

Java Full Stack Developer

Responsibilities:

- Built and optimized RESTful APIs with Spring Boot, enabling seamless integration between front-end, back-end, and third-party systems.
- Managed AWS infrastructure — including EC2, RDS/PostgreSQL, Lambda, S3, ELB, and API Gateway — to ensure high availability and fault tolerance.
- Automated CI/CD pipelines using Jenkins and Gradle, enabling repeatable builds, automated testing, and fast deployments.
- Designed, developed, and deployed microservices using Spring Boot and Node.js, improving modularity, scalability, and maintainability across distributed systems.
- Developed reusable Spring Boot components using Dependency Injection (DI), increasing testability and reducing QA defects by ~25%.
- Connected applications to GraphQL APIs, reducing over-fetching, optimizing payloads, and improving client-server performance.
- Applied Aspect-Oriented Programming (AOP) for centralized logging, exception handling, and access control across services.
- Implemented caching strategies to reduce database queries and enhance application performance under high load.
- Orchestrated deployments with Kubernetes, implementing rolling updates, blue-green releases, and zero-downtime deployments.
- Monitored and optimized application performance with AWS CloudWatch, setting up proactive alerts to detect issues early.
- Developed multi-threaded Java applications to improve concurrency, throughput, and system responsiveness during peak usage.
- Automated data workflows and ETL processes using Spring Batch, and handled large-scale data efficiently in production.
- Developed responsive front-end interfaces using React, HTML5, CSS3, and SASS, ensuring cross-browser compatibility and enhanced usability.
- Integrated Web Sockets to support real-time features such as notifications, live chat, and data streaming.
- Created Docker containers for backend and front-end components, standardizing environments across development, QA, and production.
- Implemented JWT-based authentication and configured API Gateway security policies to secure microservices.
- Provided production support for enterprise applications hosted on WebLogic Server, maintaining stability and reliable deployments.
- Used Git and Bitbucket for version control, managing branching, pull requests, and conflict resolution.
- Participated in Agile Scrum ceremonies, including sprint planning, daily stand-ups, retrospectives, and sprint reviews.
- Contributed to backlog grooming and sprint estimation, ensuring accurate delivery timelines and equitable workload distribution.
- Worked closely with QA, DevOps, and product teams to deliver high-quality releases in a fast-paced Agile environment.
- Built automated front-end test suites using Jest and Selenium, increasing test coverage and minimizing regression issues.
- Wrote JUnit-based unit and integration tests, following TDD practices to maintain robust regression coverage.
- Conducted peer code reviews to enforce coding standards, maintain maintainable code, and share knowledge across teams.

Environment: Java, Spring Boot, Node.js, REST, GraphQL, AWS, Kubernetes, Docker, Jenkins, Gradle, Spring Batch, AOP, React, HTML5, CSS3, SASS, Web Sockets, JWT, WebLogic, Git, Bitbucket, JUnit, Jest, Selenium

CVS, Minneapolis, MN

April 2019 – September 2021

J2EE Developer

Responsibilities:

- Designed and developed RESTful APIs using Spring Boot, Spring Data JPA, and JDBC, optimizing queries and caching to boost response time by 35%.

- Built and deployed microservices-based applications supporting modular development, independent scaling, and high fault tolerance.
- Utilized Spring AOP for centralized exception handling, access control, and logging across distributed services.
- Implemented resilient design patterns such as circuit breakers, retries, and load balancing to improve uptime and stability.
- Deployed and managed applications on AWS Elastic Beanstalk, Amazon EKS (Elastic Kubernetes Service), and Amazon S3, ensuring scalability, availability, and secure data storage.
- Automated CI/CD pipelines using Jenkins, Maven, and Git, improving deployment consistency and reducing release cycle time.
- Administered Amazon RDS (MySQL/PostgreSQL) and Amazon Document DB (MongoDB-compatible) to handle both relational and NoSQL data requirements.
- Integrated Amazon SQS and RabbitMQ to implement asynchronous, event-driven message processing and improve system responsiveness.
- Secured REST APIs with OAuth 2.0 and JWT-based authentication, maintaining compliance with enterprise security standards.
- Developed responsive front-end interfaces with Angular, TypeScript, Material UI, HTML5, and CSS3 for consistent multi-device usability.
- Enhanced asynchronous front-end processing using RxJS, and improved user interactivity and real-time data updates.
- Conducted unit testing with JUnit under Test-Driven Development (TDD) to maintain robust and testable codebases.
- Tuned WebLogic Server configurations, optimizing clustering, connection pooling, and thread management for better runtime efficiency.
- Collaborated with QA, DevOps, and Business Analysts to deliver high-quality features on schedule and within defined scope.
- Participated in Agile Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives to align development with business objectives.
- Performed peer code reviews to maintain coding standards, enforce best practices, and encourage team knowledge sharing.
- Applied AWS CloudWatch and Elastic Load Balancing (ELB) for proactive monitoring, performance tracking, and incident resolution.
- Created and maintained technical documentation, including API specifications, design blueprints, and deployment procedures.
- Investigated and resolved production issues through detailed root cause analysis, and minimized downtime and prevented recurrence.

Environment: Java, Spring Boot, Spring Data JPA, JDBC, REST, Microservices, AWS, Jenkins, Maven, Git, Angular, TypeScript, Material UI, HTML5, CSS3, Rx JS, JUnit, RabbitMQ, OAuth 2.0, JWT, WebLogic.

Express Scripts, New Jersey

May 2018 – March 2019

Java Developer

Responsibilities:

- Developed the front-end screens using Angular which is a java script framework.
- Developed user Interfaces using Angular to provide unique personalized look-and-feel for end users of the system using HTML, CSS, and Type script.
- Wrote reusable components for presentation end to use across all the other modules in the applications such as pagination, dynamic rendering of table data with customized view etc.
- Designed new models with an Object-Oriented approach using JS and jQuery components for CRM application for customer service.
- Developed web presentation layer using HTML and CSS according to internal standards and guidelines.
- Experience in using Angular for the Webpage's.
- Used JS for custom client-side validation and DOM manipulations.
- Involved in OOA/Design, UML Modelling and in developing Use Case Diagrams, Class diagrams, Behavioural Diagrams (Activity Diagrams, and Sequence Diagrams).
- Developed design Patterns like Factory and Singleton and used extensively.
- Developed configuration classes for accessing configuration and database information.
- Primitive client-side validations are handled using JavaScript.
- Used JDBC to connect to back-end database Oracle.
- Used MySQL extensively by developing different tables and run SQL queries on them.

- Performed analysis of defects associated with Application-to-Application interfaces, helping to identify the root cause and the team that needs to fix the problem.
 - Developed project by using Maven build tool to build and deployed application on Apache Tomcat server.
 - Conducted unit and integration testing using JUnit. Involved in project enhancements and maintenance.
- Environment:** Java, HTML, CSS, Micro Services, REST API, Angular 8, Spring Boot, Oracle 10g, Sonar, Git, Jira, Apache Tomcat, JSON, JUnit, Agile, Apache.

Symbiosis Technologies India

April 2014 – November 2017

Jr. Java Developer

Responsibilities:

- Developed and enhanced Java-based web applications using Struts MVC, JSP, and Servlets, ensuring scalability, maintainability, and modular design.
- Built and integrated SOAP and RESTful APIs to enable smooth communication between internal systems and external platforms.
- Implemented Enterprise JavaBeans (EJB) for business logic and user session management, streamlining data processing across distributed systems.
- Managed application deployment and scaling using AWS EC2, and enhanced system reliability and availability during peak workloads.
- Leveraged AWS S3 for secure file storage, retrieval, and lifecycle management, ensuring cost-efficient data operations.
- Developed AWS Lambda functions to support asynchronous workflows, optimizing compute resources and reducing manual intervention.
- Optimized SQL queries and stored procedures, improved database response time, and configured AWS RDS with automated backups for fault tolerance.
- Created custom JSP tag libraries to simplify UI development, enforce consistency, and accelerate front-end delivery.
- Collaborated with QA engineers and UX designers to deliver user-focused features that met design and functionality requirements.
- Used Git for version control and participated in peer code reviews, maintaining clean, high-quality, and maintainable code.
- Integrated Log4j for structured application logging, improving real-time monitoring, and expediting issue resolution.

Environment: Java, Struts MVC, JSP, Servlets, SOAP, RESTful APIs, Enterprise JavaBeans (EJB), AWS EC2, AWS S3, AWS Lambda, SQL, AWS RDS, JSP Tag Libraries, Git, Log4j

Education:

- Bachelors in computer science, JNTUH, May 2013
