

Professional Summary

DevOps Engineer with 3 years of experience in cloud infrastructure, CI/CD automation, and DevSecOps. Proficient in AWS, Jenkins, GitHub Actions, GitLab CI, Docker, Kubernetes (EKS), Terraform, Ansible, Linux, Bash, and Git. Experienced in Infrastructure as Code (IaC), microservices deployment, release automation, cloud monitoring using Prometheus, Grafana, ELK Stack, and CloudWatch, and integrating SonarQube, Checkmarx, and Trivy into CI/CD workflows. Adept at supporting secure, scalable, and highly available environments while working in Agile/Scrum teams.

Technical Skills

Cloud: AWS (EC2, ECS, EKS, S3, Lambda, IAM, VPC, CloudFormation, CloudWatch, ELB)
CI/CD: Jenkins, GitHub Actions, GitLab CI/CD, Release Management
Containers & IaC: Docker, Kubernetes (EKS), Helm, Terraform, Ansible
Version Control & Build: Git, GitHub, GitLab, Maven, Nexus Repository Manager
Monitoring: Prometheus, Grafana, ELK Stack
DevSecOps: SonarQube, Checkmarx, Trivy, RBAC
OS & Scripting: Linux, Windows Server, Bash, Shell Scripting, Python
Networking & Methodologies: TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, Agile, Scrum, SDLC, Blue-Green & Canary Deployments, Microservices

Experience

Junior DevOps Engineer HCA Healthcare, USA	Feb 2026 - Present
- Developed and maintained CI/CD pipelines using Jenkins, GitHub Actions, Maven, and Git, automating build, testing, and deployment workflows while reducing manual deployment effort by 70%. - Provisioned and managed secure AWS infrastructure using Terraform and AWS CloudFormation, supporting 50+ cloud resources across development, testing, and production environments. - Built, deployed, and managed 20+ containerized microservices using Docker and Amazon EKS, improving application scalability, availability, and deployment consistency. - Integrated SonarQube, Checkmarx, and Trivy into CI/CD pipelines to perform automated code quality checks and security scanning, reducing deployment vulnerabilities by 40%. - Configured monitoring, logging, and alerting using Prometheus, Grafana, CloudWatch, and the ELK Stack, enabling proactive issue detection and reducing production incident resolution time by 35%.	

Cloud Engineer/SRE Persistent Systems, India	May 2022 - Nov 2024
- Orchestrated a zero-trust multi-cloud GitOps framework using ArgoCD and HashiCorp Vault to centralize secrets management, mitigating unauthorized access risks and cutting configuration drift across 45+ EKS clusters by 40%. - Architected automated CI/CD release pipelines using Jenkins and GitHub Actions, reducing production deployment time from 4 hours to 45 minutes for a legacy modernization project. - Engineered modular IaC blueprints with Terraform and Ansible to automatically provision multi-region AWS environments, eliminating manual setup errors and accelerating infrastructure delivery by 55%. - Spearheaded Tier-3 incident response workflows under strict production SLAs using Dynatrace and ELK, reducing Mean Time to Resolution (MTTR) by 25 minutes per critical ticket. - Overhauled containerized microservices architectures using Kubernetes, Helm, and OpenShift, optimizing resource allocation to cut cloud spend by 24% while maintaining 99.99% system uptime. - Embedded automated DevSecOps gates into the delivery pipeline using SonarQube, Snyk, and Open Policy Agent (OPA) to identify and block an average of 15+ high-severity vulnerabilities per release sprint. - Standardized observability infrastructure by building unified Prometheus and Grafana dashboards, enabling teams to detect memory leaks 15 minutes before user-facing downtime occurred.	

Education

Master of Professional Studies (MPS) in Informatics Northeastern University, Boston, USA	Jan 2025 - Jun 2026
---	----------------------------

Projects

AWS SlackOps Link
- Built and maintained CI/CD pipelines for application deployments on AWS by monitoring EC2 state changes using EventBridge and Lambda, enabling automated incident response and faster recovery. - Containerized automation applications using Docker on Linux with Python and Bash scripting, eliminating manual intervention for routine infrastructure operations across AWS accounts. - Configured monitoring and alerting using CloudWatch and Prometheus, implemented IAM security controls, and maintained Git-versioned deployment scripts for secure and consistent infrastructure provisioning.
AWS Multi-Tier Application Link
- Provisioned AWS infrastructure including Lambda, API Gateway, S3, and DynamoDB across development, testing, and production environments using Terraform with Infrastructure as Code. - Built CI/CD pipelines using GitHub Actions and Jenkins by integrating Terraform validation, security scanning, and automated deployment workflows to streamline application releases. - Containerized applications using Docker and Kubernetes while monitoring application health, logs, and performance with CloudWatch and Grafana dashboards.
Lead Scoring ML Model Link
- Developed Python and SQL data pipelines on Linux to clean, transform, and process large datasets, and built a Logistic Regression model using feature engineering, model evaluation, and prediction testing for accurate lead scoring. - Documented the complete workflow through Jupyter Notebooks, technical runbooks, and stakeholder presentations, ensuring reproducibility, knowledge transfer, and operational readiness.

Certifications

AWS Certified Cloud Practitioner - Nov 2025
--
