

Prince Pastakiya

PROFESSIONAL SUMMARY

Data Analyst who transforms complex data into actionable business insights using SQL, Power BI, Tableau, and Python. Reduced reporting turnaround by 50% and increased customer retention by 5% through churn analysis and marketing dashboards. Proven ability to partner with non-technical stakeholders, define KPIs, and deliver data-driven recommendations in financial services, telecom, and healthcare

SKILL

- **Analysis & Visualization:** SQL, Power BI, Tableau, Excel (Pivot Tables, Power Query, VBA), Statistical Modelling
- **Data Manipulation:** Python (Pandas, NumPy), Data Cleaning, Data Validation, Aggregation
- **Databases:** PostgreSQL, MySQL, SQL Server, AWS Redshift, Azure SQL Database
- **Collaboration Tools:** Git, Jira, Confluence, Stakeholder Presentations
- **Supporting Knowledge:** ETL Concepts, Databricks (basic), AWS S3/Glue (basic)

WORK EXPERIENCE

Data Analyst | Zennith Technologies Inc. (Remote)

Jan 2025 - Present

- **Reduced reporting turnaround time by 50% for 50+ marketing and finance users** by building star schema data models in Databricks and integrating them directly with Power BI dashboards, eliminating ad-hoc SQL requests
- **Increased customer retention by 5%** by building a churn analysis dashboard that identified at-risk accounts through usage pattern drops, enabling the marketing team to launch targeted win-back campaigns
- **Boosted campaign ROI by 10%** by creating a customer segmentation dashboard in Power BI, allowing marketing to allocate budget to high-LTV clusters instead of broad, low-performing segments
- **Saved 200+ hours of manual work per month** by automating a daily 4-hour Excel reconciliation report using Python and VBA, reducing it to 8 minutes of automated execution with zero manual errors
- **Improved data accuracy to 100% for real-time dashboards** by implementing validation checks between source systems (Oracle) and reporting tables, catching 3+ data discrepancies per week before business users noticed
- **Partnered with product and sales teams to define 12 new KPIs** including customer lifetime value (CLV) and monthly recurring revenue (MRR), standardizing definitions across the organization for the first time

Data Engineering Intern | Cloud End Platform Pvt Ltd | Hyderabad, India

Jan 2019 – Dec 2019

- Migrated healthcare datasets from Teradata and Oracle to AWS and Azure Databricks, building PySpark ETL pipelines and ensuring HIPAA-compliant data handling
- Developed Glue crawlers, ETL jobs, and automated workflows using Airflow and Databricks, improving data processing reliability
- Created Power BI dashboards to track patient outcomes and claims turnaround, providing visibility for healthcare operations
- Implemented CI/CD pipelines with Jenkins and GitLab for ETL jobs and dashboard deployments

PROJECTS

Enterprise Financial Data Dashboard | Power BI, SQL, Excel

- Built an interactive executive dashboard tracking daily transaction volume, fraud flags, and settlement times. Reduced monthly financial close from 5 days to 6 hours by automating data refresh and validation

Telecom Customer Analytics Platform | SQL, Python (Pandas), Power BI, Excel

- Integrated customer, survey, and transactional datasets into a single analytics platform. Enabled marketing to launch segmentation campaigns 3x faster than the legacy system by reducing data prep time from 6 hours to 1 hour per campaign

EDUCATION

Bachelor of Science in Computer Science | Troy University, Troy, AL, United States

Dec 2024
