

PRIYA VERMA

Business Analyst | Data Analyst | Business Intelligence

Dallas, TX | (945) 308-4807 | priyavermaa119@gmail.com | linkedin.com/in/priya-vermaa

SUMMARY

Business and Data Analyst with 4 years of experience across healthcare, consulting, public sector, and nonprofit environments, using **SQL, Python, Power BI, and Tableau** to deliver actionable insights and support data-driven decisions. Proven success improving **data quality, KPI reporting, dashboard development, process automation, and stakeholder reporting** across complex, multi-stakeholder programs. Hands-on experience applying **Generative AI, LangChain, RAG, and prompt engineering** to automate analytical workflows and enhance reporting and decision support.

SKILLS

Analytics & BI: SQL, Python, Power BI, DAX, Tableau, Excel, KPI Reporting, Data Visualization, Statistical Analysis, A/B Testing, Hypothesis Testing, Root Cause Analysis, Ad Hoc Reporting

Data & Engineering: Snowflake, DBT, ETL, Data Modeling, Data Quality, Data Validation, MS SQL Server, REST APIs

Business Analysis: Requirements Gathering, Requirements Analysis, Stakeholder Management, Process Analysis, Process Improvement, Process Documentation, Data Mapping, Business Process Automation, Agile

Automation & Microsoft Power Platform: Power BI, Power Automate, Power Apps, Copilot, Workflow Automation

AI & Generative AI: Generative AI, Prompt Engineering, LangChain, LangGraph, RAG, Anthropic Claude API, AI Workflow Automation

EXPERIENCE

BuzzClan, Dallas, TX

July 2025 - Present

Business Analyst

- Spearheaded **Generative AI-driven requirements gathering** across 15+ stakeholders, using Claude and ChatGPT with targeted prompt engineering to synthesize meeting notes and accelerate content mapping across a 100-report migration program.
- Turned **ambiguous business requirements into phased migration roadmaps** for 50+ SharePoint sites, defining execution dependencies, milestones, and go-live readiness for development teams.
- Through Power Automate, automated **10 SharePoint workflows** for trigger-based alerts, status notifications, and information routing, cutting manual follow-up and improving coordination across migration phases.
- **Power BI dashboards and DAX-based KPI reporting** gave program managers migration performance insights through Copilot-enabled narrative generation, reducing ad hoc status requests by **60%**.

Lantern, Dallas, TX

May 2024 - March 2025

Data Operations Analyst

- Diagnosed data-quality issues with a **SQL-based root cause framework** using CTEs, window functions, and complex joins; resolution time fell by 75% across 500K+ healthcare claims, enabling same-day identification of schema versus upstream feed failures.
- Across 80 use cases, **optimized DBT and Snowflake data models** to shorten client implementation from 6 to 4 weeks across 40+ onboardings and save an estimated \$50K in operational costs.
- For 3 clients, **validated 102K+ healthcare claims per weekly reporting cycle** under HIPAA constraints, performing audit-trail, cross-client data-isolation, and deductible checks while supporting encryption and decryption workflows.
- Integrated **ChatGPT and REST APIs** into daily workflows for **SQL development and data pipeline documentation**, improving resolution time for complex data tasks and delivery consistency across client engagements.
- Presented **business insights and actionable benefit plan summaries** to 7 client managers, translating technical pipeline outputs into findings that nontechnical stakeholders could interpret and act on.

Tenet Healthcare, Dallas, TX

May 2023 - August 2023

Data Analyst Intern

- Created **SQL ETL pipelines and validation checks** that achieved 99% validation accuracy across 20+ business rules, with 0 audit findings during the engagement.
- Eliminated manual steps by redesigning the **data reconciliation and QA workflow**, cutting processing time by 75% and shifting analysts from routine checks to exception-based review.
- Partnered with **5 business stakeholders** across internal and external teams to capture reporting requirements and align pipeline outputs with downstream decision-making needs.

Wipro Consulting, India

June 2020 - July 2022

Business Analyst

- Quantified **\$2.5M in financial variance exposure at 84% accuracy** through Python and SQL regression models using Pandas and Scikit-learn, supporting model-based quarterly executive budget decisions.
- Before deployment, ran **A/B and hypothesis tests** for KPI logic changes, preventing 3 reporting errors from reaching leadership and lowering monthly financial reporting inaccuracies by **35%**.
- Advised teams across **12 client and internal engagements** by tailoring analytical outputs, reports, and recommendations for both technical and business audiences.

PROJECTS

- **KPI Reporting Accelerator** / Python, SQL, Excel, openpyxl

Cut monthly KPI reporting turnaround from 4 hours to under 10 minutes by automating a Python, SQL, and Excel data-validation workflow; anomaly detection flagged data irregularities before reports reached leadership.

- **AI Data Quality & Root Cause Analyst** / *Python, SQL, LangGraph, RAG, Snowflake, FastAPI, Power BI*
Engineered a robust AI bot using Claude API and Python, which processed over 500 stakeholder inputs monthly, streamlining requirement gathering and enhancing team productivity by automating repetitive tasks previously performed manually.
- **AI Requirements & Reporting Analyst** / *Python, LangChain, RAG, Claude API, Prompt Engineering, REST APIs*
An LLM-powered workflow converts meeting notes and stakeholder inputs into structured requirements, KPI definitions, report mappings, user stories, and acceptance criteria; RAG over reporting documentation surfaces gaps, dependencies, and duplicate requirements.
- **Healthcare Claims Analytics Copilot** / *Python, SQL, LangChain, RAG, Snowflake, Claude API, Power BI*
A conversational healthcare claims copilot combines natural-language questions with governed SQL analysis and business-rule retrieval to explain claim volume, denials, deductible trends, and data-quality issues with supporting metrics and context.

EDUCATION

Master of Science, Information Technology Management, University of Texas at Dallas, TX	May 2024
Relevant Coursework: Business Analysis with R, Advanced Statistics, Data Visualization, Python for Data Science	
Bachelor of Technology, Computer Science and Engineering, Chitkara University, India	May 2021
