SUMMARY

Data Analyst with 3+ years of experience building automated SQL and Python ETL pipelines for data consolidation and analysis. Expertise in developing Tableau and Power BI dashboards, and conducting statistical analysis with Pandas and NumPy. Proven ability to optimize workflows, ensure data quality through UAT, and deliver actionable insights supporting business operations.

SKILLS

Methodologies & Frameworks: SDLC, Agile (Scrum, Kanban), Waterfall

Programming Languages: Python, SQL, R

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Databases: MySQL, PostgreSQL, Microsoft SQL Server

Cloud & Data Warehousing: AWS (S3, Redshift), Snowflake, Google BigQuery, Azure

Data Analysis & Statistics: Statistical Analysis, Hypothesis Testing, A/B Testing, Regression Analysis, Predictive Analytics, Cohort Analysis, Funnel Analysis, Customer Segmentation, Exploratory Data Analysis (EDA)

Data Management: ETL/ELT Pipelines, Data Modeling, Data Wrangling, Data Cleaning, Data Quality, Data Governance

Data Visualization & BI: Tableau, Power BI (DAX, Power Query), Looker, Advanced Excel (Pivot Tables, VLOOKUP), KPI Dashboards

Version Control and CI/CD Pipelines: Git, GitHub, Jenkins

EDUCATION

Master of Science in Business Analytics | Kent State University, Kent, OH

May 2025

Bachelor of Science | Prasad V Potluri Siddhartha Institute of Technology, Vijayawada, India

May 2023

PROFESSIONAL EXPERIENCE

Data Analyst | PNC, Ohio

October 2024 - Current

- Built automated **SQL/Python** extraction pipelines consolidating core banking data sources into unified **loan processing databases**, supporting 2,500+ daily transactions with improved processing accuracy and reliability.
- Developed **business intelligence dashboards** in Tableau to visualize loan portfolio **KPIs** and **risk management** metrics, enabling relationship managers to optimize client account coordination and increasing monthly throughput by 12% across 1,200+ accounts.
- Mapped end-to-end loan origination workflows using **SQL**, identifying automation opportunities in credit approval processes and reducing loan processing time by 35%, directly impacting 500+ customer applications daily.
- Partnered with data engineers on **UAT** for financial reporting tools, resolving 15 data quality issues through **quantitative analysis**, eliminating critical defects and saving approximately \$80K in rework costs.
- Redesigned customer eligibility verification for lending products using **SQL gap analysis** and **statistical methods**, reducing manual record reviews by 25% and saving 40 weekly hours across credit operations.

Data Analyst | Vivma Software Inc, India

January 2022 – August 2023

- Built **Python/SQL ETL** pipelines consolidating 12 data sources into a unified investment analytics warehouse, improving data accessibility and supporting portfolio management operations with reliable, structured reporting.
- Developed **scikit-learn** regression models for regulatory forecasting and risk analysis, improving investment recommendation efficiency by 40% and directly influencing key portfolio adjustment decisions presented to senior stakeholders.
- Designed interactive **Power BI** dashboards aligned to **BRD** specifications, enabling cross-functional leadership teams to identify market trends and measurably improving client reporting efficiency across investment operations.
- Conducted **Python Pandas/NumPy** statistical analysis on market trends, applying cost-benefit frameworks to optimize investment recommendations and improve analytical output quality across equity and fixed-income portfolios.
- Implemented automated **Python** data validation protocols for trading data and market prices, ensuring accuracy in portfolio valuations and risk calculations across equity, bond, and derivatives positions.

ACADEMIC PROJECTS

POS(Point-of-Sale) Data Analysis for Kent Natural Food Store: Analyzed POS data for Kent Natural Food Store using Python, SQL, and Tableau, identifying packaged dry goods as top sellers, reducing stockouts by 15%, and increasing revenue by 10%.

Vintage Vehicle Catalog Web Application: Developed a full-stack Flask web application for cataloging classic vehicles, integrating SQLite and MongoDB Atlas, implementing secure authentication with Flask-Login and WTForms, and building a responsive front end with Jinja2.

Image Classification with CNNs and Transfer Learning: Built and evaluated convolutional neural networks in Python using TensorFlow and Keras to classify image data. Compared scratch training with transfer learning, applied augmentation and dropout, and achieved 91.3% validation accuracy, validating the efficiency of pretrained models for limited datasets.

Real Estate Price Estimation via Regression: Developed a data-driven pricing model using R and Excel, applying statistical methods and visual analysis. The model explained 80% of price variance, supporting accurate and interpretable predictions.

CERTIFICATIONS

- Machine Learning Certification Course, Analytics Vidhya
- Introduction to MS Excel, Simplilearn
- Tableau for Beginners, Analytics Vidhya
