

Ramesh kethavath
Production Support Engineer/Java Developer
316-247-4509|ramdeveloper84@gmail.com

PROFESSIONAL SUMMARY:

- Results-driven Full Stack Java Developer with 3 years of experience delivering scalable web applications and secure APIs using Spring Boot and React.js. Proven ability to improve application performance, streamline deployments with Docker and Jenkins, and build cloud-native solutions on AWS. Strong background in microservices architecture, API security (JWT/OAuth2), and database optimization, with a focus on delivering reliable, user-centric solutions in Agile environments.
- Strong background in **incident management, root cause analysis (RCA), performance monitoring, and release coordination** for mission-critical applications.
- I am skilled in using monitoring tools such as **Splunk, New Relic, Dynatrace, Kibana, and AWS CloudWatch** to analyze system behavior and resolve production issues.
- Hands-on experience with **REST APIs, microservices architecture, CI/CD pipelines, containerization technologies (Docker/Kubernetes), and AWS cloud services.**
- Adept at collaborating with cross-functional teams including development, DevOps, QA, and business stakeholders to ensure application stability and continuous system improvements.
- Committed to maintaining **system reliability, performance optimization, and proactive monitoring** while continuously improving operational processes and application quality.
- Experienced in analyzing production incidents, reviewing application logs, and performing root cause analysis (RCA) to identify underlying system issues and implement preventive solutions that improve application stability and reliability.
- Strong understanding of **microservices-based architecture and distributed systems**, supporting service integration, API monitoring, and system performance optimization in cloud-based environments.
- Skilled in collaborating with **cross-functional teams including developers, DevOps engineers, QA teams, and business stakeholders** to resolve production issues, support deployments, and ensure smooth delivery of enterprise applications.

TECHNICAL SKILLS

Languages	C, JavaScript, Java, SQL, PL/SQL
Mark-up/XML Technologies	HTML5, CSS3, JSP, JSTL, JavaScript, Bootstrap, JQuery, Ajax, Angular, JSON, XML.
Tools & Framework	Spring Boot, Spring MVC, Spring JDBC, Spring IOC, Spring AOP, Spring Security, Hibernate, JPA
Web services	SOAP, RESTful Services, JAX-RS, JAX-WS, Microservices
Cloud & DevOps	AWS (EC2, S3, CloudWatch, IAM, ECR), Jenkins, GitLab, Docker, Kubernetes, Maven.
Database	Oracle, My SQL, DB2, MongoDB
IDEs	Eclipse, IntelliJ, and Spring Tool Suite (STS).
Testing Tools/ Others	JUnit, Mockito, Soap UI, Putty, Cucumber.
Messaging Tools	Kafka, RabbitMQ, JMS
Version Control	Tortoise SVN, CVS, Git.
Tools	Flink, Splunk, New Relic, Kibana, JvisualVM, Log4j and Dynatrace.
OS & Environment	Windows, MacOS, Unix, Linux
Design Patterns	MVC, Front Controller, Singleton and DAO patterns

PROFESSIONAL EXPERIENCE:

Sabnext LLC – Wichita, KS

Oct 2024 - Present

Java Developer/Production Support/Deployment Engineer

Responsibilities:

- Participated in Agile SCRUM development processes, collaborating with cross-functional teams to review sprint progress, address technical challenges, and ensure smooth delivery of application features and production support activities.
- Provided **L2/L3 production support for Java and Spring Boot microservices-based mortgage applications**, troubleshooting incidents, analyzing logs, and resolving application failures to maintain high system availability for financial service operations.
- Monitored application performance using **New Relic, Splunk, and AWS CloudWatch**, identifying performance bottlenecks, JVM memory issues, API latency, and infrastructure anomalies impacting backend services.
- Investigated and resolved **production defects and service failures** by analyzing application logs, database queries, and microservice behavior, performing root cause analysis (RCA) to prevent recurring incidents.

- Coordinated **application deployment and release management activities**, supporting stable releases across development, staging, and production environments while preparing deployment documentation and rollback strategies.
- Improved **REST API performance and system reliability** by optimizing backend Java logic, tuning database queries, and implementing performance improvements within Spring-based services.
- Supported **cloud-native application environments using AWS services (EC2, S3, CloudWatch, IAM) and container platforms such as Docker and Kubernetes**, ensuring stable microservice deployments and high system availability.
- Monitored and maintained containerized services using **Docker, Kubernetes, and AWS monitoring tools** to ensure high system availability.

Environment: Java, Shell Scripting, Unix, JSP, J-Query, JSON, Spring Boot, Spring Batch, Spring JDBC, Spring IOC, Spring MVC, Spring AOP, Spring ORM, Angular JS, Angular 13, Microservices, Oracle, PostgreSQL, XML, Rest Web Services, Agile, AWS, Kafka, Elastic Search, Maven, Docker, Kubernetes, Fortify, 42Crunch, Ngrx, Jasmine, Protractor, Blackduck, Swagger, Open API, Gitlab, Couch, Jetty, Tomcat, JIRA, Windows.

Vassarlabs IT Solutions, India
Software Development (Intern)

Sep2020-Mar 2022

Project Description: The project focused on developing and supporting a healthcare management platform designed to streamline patient data processing, clinical workflows, and healthcare service delivery. The system integrated multiple healthcare modules to manage patient records, appointment scheduling, and medical data securely while ensuring regulatory compliance.

Responsibilities:

- Participated in multiple phases of the Software Development Life Cycle (SDLC) including requirements analysis, design, development, testing, and deployment of Java-based healthcare applications, while collaborating with business users to prioritize tickets, enhancements, and release deliverables.
- Coordinated with stakeholders and development teams to **analyze change requests, manage quarterly releases, and support User Acceptance Testing (UAT)**, while preparing weekly and monthly incident trend reports for management and development teams.
- Worked on **Spring Framework technologies including Spring MVC, Spring Boot, Spring Batch, and Spring Security**, integrating existing applications into a **microservices architecture** to improve scalability and modularity.
- Implemented **secure authentication and authorization mechanisms using Spring Security and OAuth 2.0**, ensuring secure API communication and protection of healthcare data.
- Monitored applications using **Kibana, Splunk, and Dynatrace**, performing log analysis, investigating incidents, and identifying root causes to improve application performance and reliability.
- Utilized **Java 8 features such as Lambda Expressions, Parallel Streams, and Functional Interfaces** to enhance code efficiency, while implementing unit testing using **Mockito and logging using Log4J**.
- Supported **CI/CD implementation using Maven and Jenkins**, automating build and deployment processes while managing incidents and service requests using **ServiceNow and Remedy ticketing systems**.
- for issue tracking and **IntelliJ** as **IDE**.
- Deployed and tested the application on **Web Sphere Application Server**.

Environment: Agile (SCRUM), Java 8, Ajax, Bootstrap, AngularJS, AWS, Micro Services, Hibernate, Spring, MongoDB, Spring Batch, Spring Boot, Spring Security, XML, GIT, JSP, Spring MVC, Spring JDBC, Mockito, JUnit, Kafka, Maven, IBM WebSphere, Selenium ,Restful, Log4J, SOA, JIRA, Spring Security, Jenkins and STS.

EDUCATION:

- Master of Science in Computer Science Wichita State University – Wichita, KS | 2022 – 2024
- Bachelor of Technology in Computer Science & Engineering- Hyderabad, India

CERTIFICATIONS:

- AWS Certified Solutions Architect – Associate
- AWS Certified DevOps Engineer
- AWS Certified Machine Learning – Specialty
- Microsoft AI Fundamentals
- Secure Linux System Programming
- Advanced Software Architecture
- Cloud Architecture Design Patterns
- Getting Started with AWS DevOps
- Introduction to AWS Identity and Access Management
