

RANJITH N

DATA ENGINEER • CLOUD DATA ENGINEER • ANALYTICS

Dallas, TX | +1 469 759 0557 | ranjith@uscareermail.com | linkedin.com/in/ranjithnathi/

▪ PROFESSIONAL SUMMARY

Data Engineer with 5+ years building and maintaining data pipelines and reporting platforms across healthcare, retail, and financial services. Strong in SQL and Python, with hands-on experience in ETL/ELT development, big-data processing using Apache Spark and Kafka, and workflow orchestration with Apache Airflow and Azure Data Factory. Comfortable owning the full flow of data — pulling from many source systems, modeling it for a warehouse, and turning it into Power BI and Tableau dashboards that teams actually use day to day. Known for clean, well-documented pipelines and for getting reporting to run on its own instead of by hand. Looking to take on enterprise-scale data engineering and cloud data work.

▪ TECHNICAL SKILLS

Languages & Querying: SQL (T-SQL, MySQL, SQL Server, Azure SQL, query tuning), Python (Pandas, NumPy, PySpark), Java, Scala, R

Big Data & Processing: Apache Spark, PySpark, Apache Kafka, Hadoop (HDFS, Hive), Databricks, Delta Lake, batch and streaming processing

Pipelines & Orchestration: ETL / ELT development, Apache Airflow, Azure Data Factory, dbt, data integration, incremental and full loads, REST API ingestion

Cloud & Warehousing: Microsoft Azure (Data Factory, Azure SQL, Synapse, Databricks), AWS (S3, Glue, Redshift), Snowflake, data modeling (star / snowflake schema), enterprise data warehousing

BI & Visualization: Power BI (Desktop & Service), Tableau, Excel (Power Query, VBA), KPI dashboards, executive and operational reporting

Data Quality & Governance: Data validation, cleansing, quality checks, data governance, HIPAA compliance

Practices & Tools: Git, CI/CD, Docker, Agile / Scrum, requirements gathering, technical documentation

▪ CORE COMPETENCIES

Data Pipeline Development • Distributed Data Processing • Real-Time & Batch Ingestion • Dimensional Data Modeling • Data Warehouse Design • Pipeline Orchestration • Data Quality & Validation • Cloud Data Platforms • Self-Service BI • Process Automation • Requirements Gathering • Cross-Functional Collaboration • Reporting Optimization

▪ PROFESSIONAL EXPERIENCE

Los Angeles County – Department of Health Services

Jun 2025 – Present

Assistant Staff Analyst — Data Engineering | Los Angeles, CA

- Build and maintain ETL/ELT pipelines that pull clinical, housing, and operational data from multiple source systems into a central Azure SQL warehouse, so program teams work from one consistent set of numbers instead of separate spreadsheets.
- Write reusable SQL transformations and dimensional data models that feed Housing for Health reporting, KPI tracking, and Continuous Quality Improvement (CQI) work.
- Schedule and monitor recurring data loads with Apache Airflow and Azure Data Factory, replacing manual refreshes that used to take up a chunk of every week.
- Design and maintain Power BI dashboards used by more than 200 staff across programs, and keep them refreshing automatically without hands-on effort.
- Add data validation and cleansing checks that catch bad records before they reach reports, which keeps analysts from chasing mismatched numbers.
- Work directly with analysts, program managers, and cross-functional teams to turn reporting requests into pipelines and dashboards they can rely on.
- Optimize Azure SQL queries, stored procedures, and ETL workflows for performance and scalability, while implementing automated logging, error handling, and alerting to improve pipeline reliability.

Walgreens

Mar 2023 – May 2025

Data Engineer | Deerfield, IL

- Built and maintained ETL/ELT pipelines in SQL and Python that ingested millions of pharmacy and retail transaction records daily from multiple source systems into a central Azure SQL warehouse.
- Developed distributed processing jobs with Apache Spark and PySpark for datasets too large for plain SQL, tuning partitioning and joins so heavy transformations finished within their processing windows.
- Designed and maintained dimensional data models (star schema, fact and dimension tables) that gave downstream reporting and forecasting teams a clean, consistent structure to build on.
- Orchestrated and scheduled recurring extracts and transformations with Azure Data Factory and Airflow, replacing manual pulls with pipelines that refreshed on their own overnight.
- Implemented data validation, profiling, and quality checks across the pipeline to catch bad or missing records before they reached warehouse tables, supporting enterprise data governance.
- Optimized SQL transformations and warehouse queries through indexing, incremental loads, and CDC, cutting the time it took to prepare data each cycle.
- Partnered with pharmacy, operations, and engineering teams to translate reporting requirements into reliable data models and pipelines, and documented sources, logic, and definitions so work stayed consistent as datasets grew.

Wipro

Jun 2020 – Dec 2022

Data Analyst | Hyderabad, India

- Built SQL and Python reporting over large operational and digital-workplace datasets across the account, feeding strategic business decisions.
- Built automated SQL reporting workflows and reusable datasets that removed repetitive manual data prep and got operational metrics to stakeholders faster.
- Set up Kafka-based ingestion to stream and stage high-volume operational data feeding downstream reporting, so information landed close to real time.
- Created executive dashboards, scorecards, and KPI reports in Power BI that gave leaders a clear, current view of operations.
- Worked with engineering, operations, and business teams to define reporting requirements, validate data integrity, and standardize how metrics were calculated across the account.
- Documented data sources, definitions, and pipeline logic so reporting stayed consistent as the team and datasets grew.

▪ KEY PROJECTS

- ▶ **Housing for Health Reporting Platform** — Consolidated several clinical and housing source systems into one Azure SQL warehouse with Airflow-scheduled loads and reusable SQL models, powering CQI metrics and KPI dashboards for 200+ county staff.
- ▶ **Pharmacy Inventory & Demand Analytics** — Built a Spark and SQL pipeline over millions of pharmacy transactions feeding Power BI and Tableau dashboards that store and operations teams used to guide stocking and forecasting.
- ▶ **Real-Time Operations Reporting** — Set up Kafka-based ingestion and automated SQL workflows that fed executive Power BI scorecards, giving leaders a near real-time view of operational metrics without manual data preparation.

▪ EDUCATION

Master of Science, Health Informatics
Bachelor of Science (B.Sc.)

Governors State University, IL, USA
Osmania University, Hyderabad, India

▪ CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (2025)
- Certified Health Data Analyst (CHDA)
- HIPAA Compliance Certification (2025)
