EXPERIENCE

Supplemental Instructor

Fullerton, CA

California State University of Fullerton

Aug. 2023 – Dec. 2024

- Provide support for undergraduate students that are struggling in Cal State Fullerton's historically difficult Computer Science courses by forming study sessions that are held twice a week and are an hour and fifteen minutes long.
- Organize and guide supplemental study sessions based on class lectures by attending class as the model student, allowing me to get a better understanding of how I can create study material that will allow students to cooperate with one another in order to build a better understanding.
- Created group activities and coding exercises in order to simplify advanced C++ topics into digestible content to prepare students for upcoming difficult concepts.

Lab Assistant

Fullerton, CA

California State University of Fullerton

Aug. 2024 – Dec. 2024

- Provided technical assistance to students in an Object-Oriented Programming C++ laboratory, collaborating with a Lab Instructor.
- Assessed and reviewed laboratory materials and projects to identify students who were experiencing difficulties.
- Communicated and elucidated object-oriented concepts to students, ensuring they acquired the requisite information to complete the weekly laboratory assignments.

PROJECTS

Artist Recommendation App | *Python, Flask, Tensorflow, Keras, Spotify API, Docker* Oct. 2024 – Dec. 2024

- Simple API endpoint that takes in an artist name and returns a list of similar artists that can be used for web development.
- Developed a dual-approach music recommendation system that leverages data from the Spotify API. This system employs both K-means clustering and neural networks to generate artist and song recommendations, taking into account various similarity metrics.

Dual Task Facial Analyzer | *Python, Flask, Tensorflow, Keras, Tailwind CSS* Mar. 2024 – May. 2024

- Developed and optimized a deep learning CNN model using TensorFlow/Keras to perform dual-task prediction, specifically age and gender classification, from facial images. The model incorporated batch normalization and dropout layers to enhance its accuracy.
- Webpage was built using Flask and is styled with the Tailwindcss framework.

Pac-Man | *Python* Feb. 2023 – Apr. 2023

- Usage of object-oriented programming to recreate the classic Pac-man game.
- As Pac-man clears the levels the difficulty of the game increases. The Ghost AI gets more aggressive as Pac-man gets closer to finishing the level.
- In this version Pac-man is able to create portals that teleport him from one side of the map to the other.

Personal Website | *JavaScript, NextJS, Chakra-UI, ThreeJS, Vercel* Oct. 2023 – Feb. 2024

- Personal website used to display personal projects and a blogging section.
- Responsive website allows visitors to toggle between light and dark mode, and that changes layout according to the user's device's screen size.
- Uses libraries such as ThreeJS to add 3D objects, and ChakraUI for smooth website animations.
- Refactored pages that allow for easy publishing and removal of projects and blogs.

EDUCATION

California State University of Fullerton

Fullerton, CA

Bachelor of Science in Computer Science

SKILLS

Languages: Python, JavaScript, React, HTML, CSS, C++, Python, x86 Assembly Language

Frameworks: React, NextJS, Flask, Tailwind CSS

Developer Tools: GitHub, Unreal Engine, Zed, Docker, Postman, Google Colab, Blender
