EDUCATION

Mount San Jacinto College

Associate of Science, Computer Science

San Jacinto, CA

May 2025

University of California Riverside

Bachelor of Science, Data Science

Riverside, CA

Expected May 2027

EXPERIENCE

Club Project Lead Backend Developer

Sept 2024 – Dec 2024

Mount San Jacinto College

San Jacinto, CA

- Led a team of 3 to scrape and publish school events to a student-facing android application, and developed a chatbot to assist with event discovery and university transfer guidance.
- Improved Playwright/BeautifulSoup webscraper to collect more relevant data.
- Pushed school events to Firestore database.
- Communicated and assisted the Frontend team with Firebase and how to pull from Firestore.
- Implemented a scheduled firebase web function to web scrape and update the database every 24 hours.
- Utilized Firebase, Firestore, Playwright, and BeautifulSoup to automate event data integration.
- Scraped 75+ events daily, fully replacing manual entry

PROJECTS

AI Story Creator | *Python, AWS Bedrock, AWS Polly, OpenCV*

Aug 2025

- * Created a Python script to create an AI story to be posted on social media.
- * Integrated AWS Bedrock to create stories given a prompt, and AWS Polly for text to speech.
- * Automated video creation from generated storylines using OpenCV, enabling end-to-end story publishing for social media.
- * Added utilities to download and resize YouTube videos for enhanced media customization.

To-do List | *Vue.js, Node.js, MySQL, Axios, Google Calendar API*

June 2025

- * Built a full-stack to-do app using Vue.js (frontend), Node.js (backend), and MySQL for persistent storage.
- Integrated Google Calendar sync via OAuth 2.0.
- * Implemented MySQL integration in Node.js to fetch and persist to-do items, enabling full CRUD functionality.
- * Increased Todo completion rate by 50%.
- * Designed the frontend with Bootstrap 5 using cards and text input fields.
- * Used Google OAuth 2.0 and Calendar API to post todo items on Google Calendar.

Online Play Casino Website | *Python, Flask, React, Javascript, MySQL*

May 2025

- * Developed a full-stack website that uses Python Flask websockets as a backend and React as a frontend to play casino games with friends.
- * Implemented a websocket connection between the server and client to send and receive data.
- * Established a game code system for up to 10 users to play with each other in a single room.
- * Wrote player data to a MySQL database and retrieved it when users reconnected to the site.

YouTube Video/Music Downloader | *C#, .Net*

Apr 2024

- * Created a Windows application to download YouTube videos and audio to support classmates with school media projects.
- * Integrated the "YouTubeExplode" library to pull videos from YouTube.
- * Developed a Python CLI (Command Line Interface) to allow classmates who weren't on Windows to get video and audio clips.
- * Assisted class of 30+ students complete their assignments 25% faster.

TECHNICAL SKILLS

Languages: Python, JavaScript, C#, MySQL, HTML/CSS

Frameworks: React, Node.js, Flask, Vue.js, Bootstrap 5

Developer Tools: Git, Firebase, VS Code, Visual Studio, PyCharm, Websockets, AWS

Libraries: Playwright, BeautifulSoup, Selenium, React-Bootstrap, Axios
