

ANIRUDH MEESALA

Email: anirudh0192@gmail.com

Address: Atlanta, GA

Mobile: +1(945) 244-2990

PROFESSIONAL SUMMARY

- **4 years of professional experience** as a **full stack developer** in designing, developing, deploying, and maintaining web-based, user-centric, client/server applications along with Enterprise and Distributed applications.
- Skilled in Python programming and have good understanding on **OOPs, Collections, Exception Handling, Input/output (I/O) System, Annotations, Concurrency, Multi-Threading, Lambda and Generics**.
- Designed, developed, and maintained Python-based applications and scripts. Leveraged Python frameworks such as Django and Flask to build web apps and APIs.
- Proficient in developing front-end systems with **JavaScript, jQuery, Ajax, Bootstrap, HTML5, CSS3** and framework such as **AngularJS**.
- Competency in working with relational databases like **MySQL, Oracle DB** and NoSQL databases like **Cassandra, MongoDB**.
- Expertise in implementing Service Oriented Architecture by using **RESTful** web services as well as in Amazon Web Services (AWS), services like **EC2, S3, IAM**.
- Designed and implemented user interfaces for web applications based on design mockups and specifications. Developed frontend components using JavaScript framework **Angular**
- Acquired proficiency with various IDEs such as **Eclipse, VS Code, NetBeans and IntelliJ**. Hands on experience with source and version control system tools like **Git**.
- Accomplished in **Agile Software Development** methodologies like Scrum, Sprint and Traditional software models like Waterfall and Test-Driven Development.

WORK EXPERIENCE

Client: American Airlines, Remote

Aug'23- Present

Role: Full Stack Developer

Responsibilities:

- Directed the design and development of complex systems within the Airline Domain, focusing on Pricing, Booking, Seat Selection, and Baggage functionalities which resulted in a 30% increase in user satisfaction.
- Collaborated with designers and other stakeholders to integrate frontend components with backend systems and ensure seamless functionality.
- Planned and executed user testing activities to gather feedback on software usability and identified areas for improvement. Developed test scenarios and scripts to guide user testing sessions and ensure consistency.
- Leveraged data analytics tools and techniques to derive insights and inform decision-making processes.
- Integrated **REST API** with **Spring** for consuming resources using Spring Rest Templates and developed RESTful web services interface to Java-based runtime engine and accounts.
- Engaged in the **SDLC** activities, including requirements gathering, design, development, testing, deployment, and maintenance. Embraced DevOps practices to automate software delivery pipelines, facilitating continuous integration and continuous deployment and improved collaboration between development and operations teams.
- Deployed applications into Continuous integration environments like **Jenkins** to integrate and deploy for development testing, which resulted in 30% reduction in deployment and efficiency.
- Utilized **Jira** tool for Issue/bug tracking, monitoring of work assignment in the system. Implemented Git controls for version tracking and maintenance of project versions.

Tech Stack: Java, Spring, Spring Boot, Agile, Spring Cloud, Spring framework/ SQL, AWS, EC2, Microservices, CI/CD, Jenkins, JavaScript, Hibernate, Maven, JIRA, JMeter, JUnit, ANT WebLogic, GitHub

Vanguard, India, Remote

Oct'20 – Jun'22

Role: Web Application Developer

Responsibilities:

- Carried out **SDLC Requirements** gathering, Analysis, Design, Development and Testing of application development using Agile methodology.
- Integrated applications with third-party **SaaS platforms** using **APIs** to leverage additional functionalities and data sources. Developed custom integrations to automate workflows between the application and SaaS services.
- Developed **data visualization** components using **tableau** to present data in a meaningful and visually appealing manner.
- Developed and consumed **RESTful Web Services** ensuring smooth data exchange, leading to a 20% improvement in data transfer speed and reliability. Utilized **Spring Security** for authentication & authorization of the application.
- Configured and maintained **CI/CD pipeline** using **Jenkins** to automate software building, testing, and deployment processes.
- Configured Amazon Identity Access Management (**IAM**) service to create groups & permissions for users to work.
- Developed a **pattern recognition** framework leveraging **machine learning techniques** to identify and match patterns across diverse datasets. Utilized **algorithms** such as **K-means clustering** and **neural networks** to efficiently recognize and categorize patterns in large-scale data sets.

- Developed reusable components and services to consume **REST APIs** using component-based architecture with **Angular6**
- Conducted unit testing and integration testing using **JUnit** framework and **Mockito** framework

Tech stack: Python, ML Algorithms, Numpy, Tableau, HTML, SQL, Microservices, Jira, GIT, Mockito, Jenkins.

Iplace Software, India, Hyderabad

Feb'19 – Sep'20

Role: Associate Software Engineer

Responsibilities:

- Extensive use of **AngularJS**, **HTML**, **JSTL**, **JSP** and **jQuery** for the presentation layer along with Java script for client-side validation.
- Implemented data encryption protocols to secure sensitive information, established audit trails to track system activities for accountability and analysis.
- Spearheaded the creation of **Micro services** business segments and RESTful administration endpoints using **Spring Boot**.
- Crafted cloud formation templates in setting up DEV, QA and UAT environments using **AWS** Cloud formation and leveraged Elastic container services to run **Docker** micro services in AWS.
- Developed custom message adapter components using **Apache Kafka** achieving a 50% improvement in message processing efficiency and reducing message latency by 25%.
- Implemented DevOps practices to improve collaboration between development and operations teams and automate software delivery processes.
- Directed **AWS** resources for cloud deployment and automation of system configurations. Executed AWS CloudFormation JSON template to provision infrastructure on AWS Cloud for pre-prod and prod environments
- Controlled **GIT** for version control. Used MVC architecture as an interface layer for management of user interactions within the application and presentation of data controls and operational results. Involved in using JMS for interprocess messaging.

Tech Stack: HTML, CSS, JavaScript, jQuery, JSP, HTTP, Spring MVC, Spring Web Flow, MySQL, RestAPI

TECHNICAL SKILLS:

Languages: Java, JavaScript, SQL, Typescript, Python, GraphQL.

Cloud Components: AWS EC2, IAM, S3

Web Services: RESTful, SOAP

AI and ML: MLperf, Benchmarking, Deep Bench, ML Algorithms.

Web Programming: HTML, CSS, JavaScript, jQuery, AJAX, React.js, Angular.

Message Queues: Apache Kafka.

Frameworks: Numpy, Matplotlib, Tableau

Databases: Oracle, MySQL, Cassandra, MongoDB

Version Control Systems: Git, GitHub

Operating System: Linux, Windows, Mac

Logging/Monitoring tool: Splunk

Container Technologies: Docker

Build Tools: Ant, Maven, Jenkins

Testing: JUnit, Mockito.

IDE's: IntelliJ, Eclipse, VSCode, PyCharm

PROJECTS

Design and implementation of a news articles classification system - NLP

This project aims to create a classification system for magazines and newspapers that can automate the classification of content based on their topics, keywords, and other pertinent characteristics.

Tech Stack: Python, NLP, Roberta, Neural Networks, Flask, Html, CSS

Telecom Churn Prediction

Built a Telecom customer churn prediction model using different Machine Learning Algorithms and Neural networks. The proposed methodology results showed that above 95% accuracy for Recall and Precision is easily achievable.

Tech Stack: Python, ML Algorithms, Neural Networks, Ensemble Models, SMOTE ENN.

Web Application on E-voting.

Online voting system which eliminates the need to cast votes using a paper or having to gather in person. Online voting system ensures integrity and privacy. Voting system's main objective is to give voters a platform to vote his favorite party and also make participants contest in the election.

Tech Stack: Java, HTML, CSS, JavaScript, MySQL

EDUCATION

Masters in Computer Science

University of Central Missouri

Aug'22-Dec'23

Bachelor of Technology

Vidya Jyothi Institute of Technology

Aug'15-May'19
